trucks

in brief

TRUCKS

Kenworth plant rising in Wash.

BELLEVUE, Wash. — Paccar Inc. began construction of a new Kenworth truck manufacturing facility this month.

The $80 million, 250,000-square-foot plant is located on a 40-acre site in Renton, Wash. Construction is scheduled to be completed by March 1993.

The new facility will employ about 800 and initially will produce 20 trucks a day.

C.M. Pigott, Paccar chairman and chief executive officer, said the plant reflects the firm's strategy to prepare for greater growth. Paccar does not plan to close its Kenworth plant in Tukwila, Wash., Pigott said.

2 programs added for Isuzu dealers

BREA, Calif. — Isuzu Truck of America Inc. has introduced used-truck and leasing programs to help dealers' sales efforts.

Isuzu developed its lease program with Associates Leasing Inc., a subsidiary of Associates Commercial Corp. of Dallas.

It will enable smaller operators to put new Isuzu trucks with various bodies into service, said James A. Smith Jr., Isuzu's director of marketing and sales administration.

Isuzu is also providing a warranty, incentives for salespersons and advertising to support used truck sales, said Bill Dresmann, Isuzu national used-truck manager.

Volvo GM moves Western office

GREENSBORO, N.C. — Western WhiteGMC, the Volvo GM Heavy Truck Corp. operating company responsible for sales, marketing, parts, and service in 16 Western states, has moved its headquarters to Salt Lake City from Ogden, Utah.

The company, in operation since December 1989, has 27 dealers.

Mack wins postal contract

ALLENTOWN, Pa. — Mack Trucks Inc. won a contract to deliver 345 trucks to the U.S. Postal Service.

The vehicles are MR600P and MR600S series tractors, said Sam Carr, Mack manager of international and original equipment sales.

GM plots several changes for '93 trucks

JOSEPH BOHN
Truck Editor

GMC Truck and Chevrolet will introduce chassis cab versions of their respective Sierra and C/K 3500 series Crew Cabs this fall. They will offer a pickup box delete option.

General Motors' 6.5-liter turbodiesel engine will be offered in the Crew Cabs for the first time.

In other 1993 model changes, an all-new GMC Vandura and Chevrolet Van 3500 HD will provide 10,100- to 14,500-pound gross vehicle weight for commercial and recreational vehicles. This is the GP chassis which GM derived by marrying a chopped G-van cab to its P3500 chassis. The 1993 3500 HD Chassis Cab also will offer an optional rear suspension package, with a shorter wrecker spring for more frame cutoff room for wrecker, car carrier and dump truck bodies, according to Ray Rota, general sales manager.

The 3500 HD will have more underhood and underbody corrosion protection. It will have cup holders on the instrument panel and a rear axle ratio change.

The GMC TopKick and Chevrolet Kodiak medium-duty models will offer Caterpillar's 3116 engine with 200 and 275 horsepower ratings. The 1993 TopKick and Kodiak also will offer a new Allison MD series electronic transmission designed to match up with the Caterpillar 3116 for ratings up to 250 hp. The MD electronically controlled automatic transmission features six-speed close ratio and six-speed wide ratio models.

The TopKick and Kodiak will also offer increased front axle ratings with Eaton's new 16,000-pound front axle. The front axle will be available with 16,000-pound and 18,000-pound front suspensions and is designed for heavy dump, refuse and snow plow applications.

The 1993 models will feature simpler controls on hydraulic brakes for the inexperienced drivers who are becoming more common among fleet operators.

A Wabco supplemental exhaust brake will be available with the Caterpillar 3116 engine and air brakes. The exhaust brakes improve brake lining wear as well as braking power.

A power ventilation system, now available only with air conditioning, will be standard on all models. It draws in cool outside air and distributes it within the cab.

Scotchgard seat fabric protection on cloth bench seats and noncycling circuit breakers also will be standard on the 1993 TopKick and Kodiak. The circuit breakers will replace current fuses.

GMC and Chevrolet will add a diesel model to their LoPro medium-duty series. It will be powered by the Caterpillar 3116 and feature ratings of 170 to 215 hp. These trucks are used for ambulances, recycling and pickup and delivery applications.

The GMC Forward and Chevrolet Tiltmaster W4 series will feature improved seat belt anchorages, front disc brake metering valves and a device that prohibits tampering with the speedometer.

The W5 and W6 series will have oil lubricated rear axle bearings and a new dual cone synchronizer for manual transmissions to improve shifting.

All W7 series with full air brakes will have a new lighter weight front axle, the same dual cone synchronizer as the W5 and W6 and weatherhead air piping connectors. The latter will increase the U.S. component content of the Isuzu-built trucks.

Asbestos brake linings and exhaust pipe gaskets will be eliminated from the 1993 Forward and Tiltmaster.

Cab supplier plans new operation

JACK SEMPLE
Special Correspondent

COVENTRY, England — Motor Panels Inc., a designer and manufacturer of Class 8 truck cabs in Europe and the United States, plans to open a product development center in the Detroit area in May.

The center will give the company full-service capability from design through manufacturing of medium- and heavy-truck cabs and components, according to Gene Denney, president and chief executive officer of the company's U.S.-based operations in Norwalk, Ohio.

Denney said the Detroit-area center will initially have a dozen employees. He anticipates employing up to 50 people within a year.

The center will enable the firm to get into the medium-duty Class 5-7 markets, Denney said.

It will also enable the firm to build a common cab for "two or three" manufacturers, Denney said. It has no specific customers for its Detroit-area operation at present.

Motor Panels produces cabs for Mack Trucks Inc. and Western Star Trucks at its plants in Norwalk, Ohio, and Kings Mountain, N.C.

In Coventry, England, the firm produces truck cabs for DAF NV of Eindhoven, Netherlands, and does high-roof conversions for Ford of Britain's transit van. The company also designed and produces body panels for Land Rover Ltd.'s Discovery model.

The first new cab designed in Detroit is likely to be a cabover with a strong European influence.

The Detroit center will be linked with Motor Panels' Conventry headquarters through a satellite communication system. Motor Panels has 100 engineers in Coventry and has invested heavily in computer-aided design and manufacturing there.

The Mack tractor is built at Motor Panels' plant in North Carolina.

The company's new U.S. operation will give truck manufacturers an opportunity to outsource even more of their development work.

Typically, manufacturers all offer the same off-the-shelf componentry from a variety of independent suppliers. Those who choose to outsource the design and production of their cabs will become little more than assemblers.

Denney called U.S. cab designs "on the whole, terribly old."

He said his firm would be able to reduce the cost of meeting upcoming legal requirements for safer cabs for cash-strapped truck manufacturers.

He has been itching to develop his company as a full-service supplier for years, but has been thwarted by a series of corporate crises. Motor Panels changed hands several times before being sold to Mayflower Corp. of London in 1991.

DEALERS

Saturn posts No. 1 sales average in '91

continued from PAGE 1

The picture wasn't any brighter on the import side. Among the major players, only Acura, Infiniti, Isuzu and Saab improved their sales per dealer.

None of the car-truck makers boosted their combined averages.

Sales per dealer are another way of keeping score in an industry that lives by the numbers. They measure the relative value of a franchise by showing the relationship between the number of new vehicle sales and the number of dealers selling those vehicles.

The averages do not indicate actual sales. For example, Saturn averaged three times as many car sales per outlet as Chevrolet last year, but Chevrolet sold nearly 16 times as many cars as Saturn.

As they have in recent years, Japanese makes dominated the top 10 lists in 1991. On the car side, Honda, Toyota, Lexus, Acura, Infiniti, Nissan and Mitsubishi snared second through eighth places. South Korea's Hyundai was ninth, and Chevrolet and Japan's Mazda tied for 10th.

Japanese makes won seven of the top 10 spots in the combined car-truck standings. Saturn was second; Ford was fifth; and Chevrolet was eighth. The other places went to Toyota, Honda, Lexus, Nissan, Acura, Mazda and Mitsubishi. Honda, Lexus and Acura — along with Saturn — made the car-truck honor roll on the basis of their car sales per dealer. They don't have trucks.

While the list of gainers in sales per dealer was short, there was no shortage of decliners. Eleven of the 13 domestic cars were down, and six of them lost 25 to 47 sales per outlet: Ford, Pontiac, Chevrolet, Lincoln, Cadillac and Oldsmobile.

Hardest hit among the imports was Hyundai, which plunged to 256 sales per franchise last year from 368 in 1990. Hyundai's car sales were down 14 percent last year, while its dealer total rose from 423 to 495. The combination of fewer sales and more dealers plays havoc with a make's sales-per-dealer average.

Hyundai's sales per outlet have dropped steadily since 1986, when its dealers averaged 1,431. That was Hyundai's first year on the U.S. market. It was also the highest average ever recorded for any make of car sold in the United States.

But Hyundai wasn't the only big dipper among the imported cars last year. Lexus lost 77 sales per franchise; Honda was down 69; and Jaguar was off 67. Drops of 38 to 51 were recorded by Nissan, Volkswagen, Mercedes-Benz, Toyota and Volvo. Of the 29 imported makes logged by Automotive News, 23 recorded fewer new-car sales per franchise in 1991 than in 1990.

A look at the combined car-truck sales per dealer indicates the importance of pickups, vans and sport-utilities to many of the top franchises.

For openers, trucks gave Toyota the highest average of any make retailed in this country. Toyota was third in cars, far behind Saturn and Honda. But adding trucks — which Saturn and Honda don't sell — put Toyota in first place.

Ford was 12th in car sales per dealer, but it was fifth in combined car-truck deliveries. Dodge moved up even more; it was 23rd in cars and 12th in cars and trucks. And Isuzu was 33rd in cars and 15th in cars and trucks.

For Dodge and Ford, trucks were the boss, and cars played a secondary role.

Trucks accounted for 58 percent of Dodge's sales per dealer and 53 percent of Ford's. Chevrolet and Plymouth were close to half and half.

Trucks made up 48 percent of sales per dealer for each.

But trucks had the biggest edge for two Japanese makes that are strictly small potatoes in the car field. For Isuzu, trucks represented 88 percent of sales per dealer. For Suzuki, trucks captured 74 percent. ■

Indonesia deal near for GM

RICHARD JOHNSON
Staff Reporter

TOKYO — General Motors is about to enter into a joint venture in Indonesia that will produce the Opel Astra and Vectra and an Isuzu-based or North American S-series light truck, a senior official disclosed last week. GM will be the majority partner in the venture.

Ronald Gilchrist, executive vice president of General Motors Overseas Corp. and head of the corporation's Hong Kong regional office, said assembly could begin by the third quarter of 1993.

"The plan would be for us to have management control . . . and 50 to 60 percent equity," he said. "We are planning to have this all brought to a head in April, so we should be ready by April-May to announce something."

He said GM is negotiating with two local assemblers/distributors. Volume would be 10,000 to 15,000 units a year in the first phase, he said, although the partners' plants will have to be upgraded to produce right-hand-drive Opels.

GM opened an office in Jakarta, Indonesia, in 1990 and began seeking joint-venture partners. The deal there would be the third and final leg of the main portion of the company's Asia-Pacific strategy.

In January, GM formed a joint venture to produce S-series trucks in China with Jinbei Automotive Co. in Shenyang. And last year, GM set up a manufacturing arrangement in Taiwan to build Astra subcompacts for the local market.

In other markets, such as Malaysia, GM is setting up kit assembly deals.

"The top tier is Taiwan, China and Indonesia," said Gilchrist. "There, we are looking at investments. In the second tier, we're going with assemblers."

While the Indonesian joint venture will build Opel cars, Gilchrist said a decision has not been reached on which light truck will be assembled there.

"We're using Isuzu right now . . . (but) we are contemplating going into the S-truck program," he said. "Once we went into China, it might make sense to do the same program in Indonesia. There may be some advantage to having the same truck in the region, the same idea as cars."

GM's Asia-Pacific assembly strategy is to produce the Astra subcompact and compact Vectra in most countries, although in the Philippines plans call for assembly of the Opel Corsa supermini. ■

Subaru SVX imports will hit Britain late next month.

Britain limits SVX dealers

LONDON — Less than 30 of Subaru's 156 dealers in Britain will given SVX sport coupes when imports begin in late April.

Only 200 SVXs will be brought in during the first year of sales, said a spokesman for International Motors, British importer of Subaru vehicles.

Luxury sales pick up in Canada

JEREMY SINEK
Staff Correspondent

TORONTO — Canada's luxury car market did a surprising about-face in 1991. Sales of luxury cars rose 22.3 percent from 44,819 units to 54,823 last year. That gain came despite a 1.2 percent decline in Canada's overall car sales.

After several years of steady decline, the luxury segment grew to 6.3 percent of the overall car market in 1991, up from 5 percent in 1990.

"It's pretty incredible considering all the bad economic news," says Mark Alger, General Motors of Canada's product segment manager for mid-sized, full-sized and luxury cars.

A big chunk of the growth can be explained by two new entries, Lexus and Infiniti, and the interest they spurred in luxury cars in general. Both were introduced in fall 1990. Lexus garnered an even 5 percent share of the segment in its first full calendar year, totaling 2,721 sales. Infiniti sold 1,121 Q45 and G20 models.

In addition, Acura's Vigor arrived last spring and tallied 1,682 sales.

Even if those newcomers aren't counted, the segment, as defined by the Motor Vehicle Manufacturers Association of Canada, still grew 12 percent. The association's list of luxury nameplates includes traditional entries from Lincoln, Cadillac and the European luxury makers as well as borderline luxury cars such as the Mazda 929, Nissan Maxima and Toyota Cressida.

But most traditional luxury nameplates lost sales. The source of nearly all the growth was GM. Thanks largely to steep rises in the Buick Park Avenue, 61.4 percent, and the Oldsmobile Ninety Eight, 47.1 percent, GM added more than 3,500 sales to the segment. Cadillac's DeVille/Fleetwood posted a 22 percent gain.

The new Seville arrived too late to have much influence on 1991, but Alger predicts Seville sales will triple in 1992: "Each month that goes along we keep upgrading our forecasts. Seville has been getting the kind of buyer we intended it to get: non-traditional Cadillac buyers."

GM's share of the enlarged segment grew from 29 percent to 30.9 percent in 1991.

Chrysler also quietly gained market share, albeit off a much lower base. Combined sales of New Yorker, Fifth Avenue and Imperial rose 38.6 percent, increasing its share from 7.3 to 8.3 percent.

Lincoln volume, conversely, slipped 7.9 percent. A Ford of Canada spokesman laid some of the blame on restricted availability of dual airbags and short supply of the Town Car during the summer. Lincoln is pinning its hopes for a better 1992 on improved supply and a small price reduction on the Continental.

There was a minor blood bath among European importers: Mercedes-Benz slipped 15.0 percent; Audi was off 18.6 percent; Volvo dropped 24.5 percent; and Jaguar was down 26.4 percent.

Audi may have been hurt by the decision to delay launching the new-generation 100 until this spring.

The exception was BMW, which posted a 7.5 percent gain, largely on the success of the new 325i. Even so, BMW's market share slipped from 8.9 to 7.9 percent.

In the Japanese corner, Acura (Legend and Vigor) climbed 74 percent, almost entirely on the strength of the new Vigor. That was enough to advance Acura's market share to 7.3 from 5.1 percent. ■

Ontario seeks gas-tax change

TORONTO — Ontario's Fair Tax Commission wants higher taxes on gas guzzlers and bigger tax credits on gas misers.

The proposal would boost the province's "tax for fuel conservation" that was first applied to fuel-thirsty cars in 1989. Last year it was revised to include a $100 ($84 U.S.) credit on cars with a highway mileage of more than 39.3 mpg. Cars that get less are taxed on a sliding scale that ranges from $75 on models that get 39.3 mpg to $4,400 for cars that get 13.1 mpg.

The proposal creates eight categories that would be used to determine fines and credits for the 1995 model year. Credits would begin at 34 mpg, which is lower than the current level. The $100 credit at that level would rise to $350 for cars that get more than 47 mpg. Penalties would range from $150 on cars that get under 34 mpg to $6,800 on those at the 13.1 mpg level.

New Subaru Vivio departs from traditional Japanese minicars

The Subaru Vivio, a replacement for the Rex minicar, emphasizes comfort, safety and economy. A driver-side airbag is standard in one variation, the first in Japan's mini segment. The Vivio will be exported to Europe and Southeast Asia.

Toyota-GM venture plans model change

LINDSAY CHAPPELL
Staff Reporter

Toyota Motor Corp. and General Motors are spending $339 million to retool their Fremont, Calif., joint venture for this year's model change.

The partners' New United Motor Manufacturing Inc will begin producing a reshaped Toyota Corolla/Geo Prizm this August. Full production of about 800 cars a day is planned by the fourth quarter.

Toyota is also retooling its smaller Corolla plant in Cambridge, Ontario. The model changeover at that plant probably will not occur until September. The plant will build about about 70,000 Corollas this year.

The NUMMI project, which is already in full swing, will introduce axle subassembly at the plant and a "doors-off" assembly line. Under that process, the car's doors are removed for assembly on a separate line and allow workers easier access into the car. New stamping presses also will be installed.

When completed, the project will bring Toyota and GM's total investment there to $1.4 billion. That includes $350 million that Toyota spent there separately to add pickup production last year.

The 8-year-old operation produces 200,000 cars a year, split evenly between the partners, and 100,000 compact Toyota pickups.

A plant spokeswoman said the changeover will stop production for one week in August. ■

Trucks fuel early March sales

JIM HENRY
Staff Reporter

Trucks came in like a lion in early March, especially for Ford, as light trucks continued to power a slow, uneven sales recovery.

Toyota Motor Sales U.S.A. Inc., for instance, followed its best February ever with a strong March 1-10 period. But American Honda Motor Co. Inc. slipped 5.5 percent.

The industry total of 276,968 cars and light trucks was 12.8 percent above a poor year-ago period. Truck sales climbed 16.1 percent, and car sales rose 11.1 percent. The period had eight selling days each year.

"There's no doubt about it; this recovery is for real," said Tom Webb, chief economist for the National Automobile Dealers Association. Sales for the Big 3 were up 14.5 percent. Counting imports and U.S.-built cars, Japanese makes were up 8.9 percent.

Of the Big 3, General Motors sales improved the most, up 15.3 percent to 104,484. Pontiac sales climbed 28.8 percent. Buick sales, which were one of the few bright spots this time last year, dipped 19.3 percent in early March.

Ford Motor Co. car-truck sales climbed 13.8 percent, spurred by an increase of 29.8 percent in truck deliveries.

Toyota sold 20,990 cars and trucks in the period, up 36.7 percent. Lexus more than doubled its year-ago sales, while Toyota-badged vehicles jumped 30.6 percent, with growth in both imported and U.S.-built vehicles.

But even at Toyota, which appears to have little to complain about, the mood was cautiously optimistic. "Retail sales up two months in a row is an encouraging signal," said Robert McCurry, Toyota Motor Sales executive vice president. "But I'll need to see a couple more months of steady improvement before I'm convinced we're breaking out of the recession." ■

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAMS	
HONDA	
Accord, Prelude (1991, no expiration date)	$500
Accord (1992, Calif. only, expires April 2)	$500
VOLKSWAGEN (1991 models, expires March 31)	
Cabriolet	$2,000

1992 models	
240 series	$500-1,000
740 series	$1,000-1,500
940 series	$1,500
1991 models	
240 series	$1,500
740 series	$1,750-2,500
940 series	$1,500-2,500
780 coupe	$2,500

SATURN

Gains fans, output rises

continued from PAGE 1

year's J.D. Power and Associates initial quality survey of 1991 models. Unless there is a significant gain in the next study, further doubts will be raised about Saturn's ability to match Japan's quality. Richard "Skip" LeFauve, Saturn president, says improving quality is his No. 1 priority.

Meanwhile, Saturn's progress on other fronts may be small comfort for GM, whose U.S. operations lost $5.3 billion in 1991. Some of that was clearly due to the Saturn launch. Dogged by technical difficulties, production mishaps and waning industry sales, Saturn baby-stepped through the market for much of 1991, keeping the meter running on its $3 billion investment. Progress aside, observers believe Saturn has a long way to go before it begins to turn a profit.

But no one is complaining too loudly right now — especially Saturn dealers. "Everything just started happening all at once," reports Charlie Hillard, owner of Saturn of Fort Worth in Texas. He expects to sell 150 Saturns this month — twice the rate of last fall. "It's like somebody turned on the lights," he says.

Sales are accelerating in step with a rapidly expanding dealer body. A year ago, with 66 stores, Saturn was selling about 2,000 cars a month. With 144 stores now, volume is closer to 12,000 a month — putting Saturn among the top 20 U.S. franchises. By year-end, Saturn hopes to have 250 dealerships.

If sales remain at the current level, Saturn will sell 140,000 cars this year. That is well below plant capacity of 240,000, but far ahead of last year's 74,626.

In January, Saturn popped into the No. 2 slot behind Lexus in Power's dealer attitude study, an annual survey reflecting retailers' happiness with their franchises. In addition, Saturn is expected to place third in the National Automobile Dealers Association's annual dealer satisfaction survey, due to be released next month.

Late in 1991, Saturn shot into the top tiers of other J.D. Power consumer surveys. It was sixth in overall sales satisfaction. It was third on the chart measuring buyers' feelings about the delivery condition of their car — behind Lexus and Mercedes-Benz. It was fifth on a scale measuring satisfaction with the delivery process, beating out Mercedes. It was seventh in a survey of customers' attitudes toward their salesperson.

In each case, Saturn was surpassed only by luxury nameplates that stake their reputation on coddling customers. In no case was Saturn outdistanced by a Japanese middle-market competitor.

"For a vehicle in the lower-middle market, Saturn is doing the best job of all. The Japanese are doing a relatively poor job," said J. David Power III, president of the Agoura Hills, Calif., research firm.

"The area where Saturn is doing a remarkably effective job is in how its retailers treat customers when they arrive for delivery of the car and in after-sale service."

Saturn is also fulfilling its mission of reclaiming sales from the imports. Internal surveys show that 53 percent of buyers of 1992 Saturns listed an import make as their second choice. Seventy-two percent, meanwhile, listed a non-GM product as their second choice.

That is two percentage points more than expected, says Donald Hudler, Saturn vice president of sales, service and marketing. In California, where imports control half of the market, 65 percent of Saturn buyers say they would have picked an import if Saturn hadn't been available. "Sometimes these things work out so accurately it's scary," Hudler says.

Saturn has had several rough experiences since it went on sale Oct. 25, 1990. A year ago, Saturn recalled 1,800 cars because of a batch of bad antifreeze. Just four months after it entered the market, Saturn recalled 1,200 cars because of faulty seat brackets.

Its first dealerships opened with near-empty showrooms, a situati that persisted for months as pr duction increased at a snail's pa amid technical difficulties. Ope ings of two dozen dealerships we delayed because of car shortages.

But Saturn has seemed to r bound gracefully from every ear setback. It recovered from its tw recalls by giving owners new ca in the coolant case and traveling customers' houses to fix the seats

Early criticism that the engi was too noisy prompted a numb of under-the-hood changes.

Saturn is still playing catch-u on demand, following months start-up problems. Early this yea workers at the Spring Hill, Tenn plant surrendered their four-da work week to work a fifth full 1 hour shift on overtime. The plant now building 900 cars a day — original target for full productio By year's end, daily output will t 1,000, LeFauve says.

EXPORTS

MITI to divvy up shares for makers

continued from PAGE 1

conditions permit and increase luxury-car volume targets.

Meanwhile, a MITI official said late last week that the ministry will take into account several factors when setting individual company export allocations for the fiscal year beginning April 1.

Among them: each carmaker's level of financial distress.

Captive imports by General Motors and Chrysler Corp. from Japanese partners could be har hit by the cut, even though MIT may bend over backward to he them with allocations.

Isuzu Motors Ltd. exporte 121,000 passenger cars in fisc 1990, using up its entire allocatio But about 90,000 of Isuzu's passenger-car exports to the Unite States are sold to GM for sale the Geo Storm. Similarly, Mitsub shi Motors Corp. exported 153,00 cars to the United States throug February, the first 11 months the fiscal year, of which 58,00 were badged as Chryslers.

A MITI official said the agenc will not take a straight 28 percen off the top of each exporter's existing allocation, but will instea review each manufacturer's ca when deciding levels for the ne fiscal year that begins April 1.

Among the factors that will b considered will be recent expor levels, U.S. sales, export plannin for the new year and each company's financial health, the officia said. For example, he said, money-losing company such Isuzu, which would suffer great at a reduced export level, might b given special consideration.

MITI also must reallocate th 17,000 cars allotted to Daihats Motor Co., which has announced will halt passenger-car shipment to the United States.

The reallocation is handled secretly, and the new levels are no officially announced. But unde the current agreement the carmakers are known to have the following allocations: Toyot 610,000; Nissan, 544,000; Hond 427,000; Mazda, 226,000; Mitsubishi, 193,500; Isuzu, 124,000; Subaru, 107,000; Suzuki, 60,000; an Daihatsu, 17,000. The MITI offici said the agency will settle allocations before the end of the mont but hasn't begun the process.

MITI officials conceded la week that the reduction probab will satisfy no one. But agenc chief Kozo Watanabe said it is " the best interest of free trade an relations between Japanese an U.S. automakers."

Echoing the sentiments of Big officials, union officials and som U.S. lawmakers, however, Chrysler spokesman called th rollback a "non-event."

"It is less than a meaningles gesture," said Robert Perkin Chrysler's vice president for Washington affairs.

Staff Reporter Max Gates in Washington contributed to this report.

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS	
CHRYSLER CORP.	
Expires March 31. Finance rates in lieu of rebates from zero to 9.9 percent.	
1991-92 models	
Chrysler New Yorker Fifth Ave., Imperial	$1,500
N.Y. Salon, LeBaron sedan	$1,000
LeBaron coupe, conv.	$500
Dodge Monaco	$1,500
Shadow, Spirit	$1,000
Daytona, Colt 3-dr.	$500
Dodge Ramcharger	$2,000
Ram wagon (van and conversion)	$1,000
Ram pickup (gas), Dakota pickup	$750
Ram 50 pickup	$500
Eagle Premier	$1,500
Talon	$1,000
Summit 3-dr., 4-dr., '92 wagon	$500
Jeep Cherokee	$1,500
Comanche	$750
Wrangler	$500
Plymouth Sundance, Acclaim, Laser	$1,000
Colt 3-dr., '92 Vista	$500
All minivans	$500
Northeast region only: LeBaron sedan, Acclaim, Spirit	$1,500
FORD MOTOR CO.	
1992 models	
Expires March 31. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered.	
Ford Taurus SHO, Probe	$1,000
Thunderbird Sport, SC (Calif.)	$1,500
Thunderbird (non-Calif.)	$750
Tempo (regional)	$500-1,000
Escort (regional)	$500-750
Crown Victoria, Mustang, Festiva	$500
Other Taurus (Calif.)	$1,000
Other Taurus (non-Calif.)	$500
Ford Econoline RV	$1,000
Ranger (Calif.)	$1,000
Ranger (non-Calif.)	$750
Bronco	$750
Aerostar (regional)	$500-1,000
F series	$400
Mercury Cougar XR7 (Calif.)	$1,500
Cougar (non-Calif.)	$750
Capri	$750
Tracer (regional)	$500-750
Sable (Calif.)	$1,000
Sable (non-Calif.)	$500
Topaz (regional)	$500-1,000
Grand Marquis	$500
Lincoln Town Car, Mark VII, Continental	$1,500
1991 models	
Expires March 31. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered.	
Ford Festiva, Probe	$1,000
Escort, Mustang, Thunderbird	$750
Taurus SHO	$600
Tempo, other Taurus	$400
Ford Bronco, Econoline E-150 RV	$1,000
Aerostar (regional)	$400-1,000
Ranger, F series, other Econoline	$400
Mercury Capri	$2,000
Tracer, Cougar	$750
Topaz, Sable	$400
GENERAL MOTORS	
1992 models	
Expires June 4, unless otherwise indicated. In lieu of rebates, finance rates of 2.9 to 6.9 percent are offered.	
Buick (based on option package ordered)	
Riviera	$2,000
Skylark, Century, Regal, LeSabre	$250-1,000
Cadillac (expires March 31)	
DeVille, Fleetwood, Brougham	$1,500
Chevrolet Lumina; Geo Storm, Prizm, Metro (manual)	$750
Cavalier, Camaro	$500
Geo Metro (automatic)	$300
Chevrolet S/T Blazer	$1,000
S/T pickup, Lumina APV	$750
G van	$500-750
C/K pickup	$400
GMC S15 Jimmy (exc. Typhoon)	$1,000
Sonoma (exc. Syclone)	$750
Sierra (regular cab)	$400
GMC (expires March 31)	
G van	$500-1,000
Safari	$500
Oldsmobile (regional)	
Toronado, Silhouette, Bravada	$1,000-2,000
Custom Cruiser	$1,000-1,500
Cutlass Ciera	$1,000
Cutlass Supreme	$750-1,500
Ninety Eight, Eighty Eight	$500-1,250
Pontiac Grand Prix, Trans Sport	$750
Sunbird, Grand Am, Firebird, Bonneville	$500
1991 models	
Expires May 4, unless otherwise indicated. In lieu of rebates, finance rates of 2.9 to 6.9 percent are offered.	
Buick (based on option package ordered)	
Reatta	$2,000
(other rebates same as 1992 models)	
Chevrolet (same as 1992 models, cars and trucks)	
GMC (expires March 31)	
G van	$500-1,000
Safari	$400
Other GMC (expires May 4)	
Same as 1992 rebates on S15 Jimmy, Sonoma, Sierra	
Oldsmobile (regional)	
Cutlass Calais	$700-1,000
(other rebates same as 1992 models)	
Pontiac (same as 1992 models)	
HYUNDAI (expires April 2)	
Excel (1991)	$1,000
Excel (1992)	$500
Elantra (1992)	$1,000
Scoupe (1991)	$750
Scoupe (1992)	$500
Sonata (1991)	$1,500
Sonata (1992)	$750
MAZDA (1992 models, expires April 6)	
Protege, 626, MX-6	$1,000 plus free air conditioning or automatic trans.
Pickups	$400-1,200
MITSUBISHI (expires April 30)	
Eclipse (1991-92, national) 5.9 to 8.9 percent loans, based on down payment	
Pickups (1990-92, Southwest region)	$1,000
Mirage (1990-92, Southwest region)	$500
SUBARU (expires April 2)	
Loyale (1991-92)	$500
Legacy (1992)	$500

SCHEDULED PLANT CLOSINGS

Plant	Weeks down	Units lost/ week
CHRYSLER		
Bramalea, Ontario	†	
Belvidere, Ill.	3/23, 3/30

T-BIRD

Ford has a bargain for California

continued from PAGE 3

"I don't think there is any competition for this car," Adams said. "Overall, I think it's a good direction at getting away from rebates."

"The California Special," as dealers call the Thunderbird program, is part of Ford's efforts to test various ways to simplify sales operations and to increase vehicle sales in certain areas.

Smith said Ford chose California because sales are brisker there than in the rest of the nation, but he would not give specific sales figures for California.

> “I think it's a good direction at getting away from rebates.”
>
> BARRY ADAMS
> HOMER HELLER FORD

He said the Thunderbird test has the same goal as Ford's one-price Escort program, which was rolled out nationally this month after a test that began last fall in the Northeast, Southeast and West.

"The objective is to give the customer value at a good price," Smith said.

Smith calls the Thunderbird test the "one-look" program. Unlike the one-price Escort program, dealers can sell the LX at any price. The recommended factory price is $15,859.

Century Ford in Fresno, Calif., sells the LX for $14,999 and expects the program to be a "door swinger." But general manager Darrell Cossey said the strategy cannot work with all models.

He said that about 60 percent of his customers owe more on their trade-ins than they are worth and therefore can't qualify to get into the cheaper one-price Escorts or Thunderbirds without a cash down payment.

Cossey said banks and credit companies generally won't finance a customer with a negative equity on a trade-in.

"It's OK to have these programs on a couple of lines," Cossey said, "but we must have the flexibility to switch customers over to cars they can finance."

Through March 10, national Thunderbird sales totaled 14,198, compared to 14,253 at the same time last year.

Trucks power 10% gain in output

ANNE E. WRIGHT
Chief Statistician

With trucks pacing the upturn, vehicle production in the United States and Canada leads last year's output by 10.8 percent.

Truck production in the two countries is up 35.0 percent for 1992, more than offsetting a decline of 2.7 percent in cars.

Total U.S.-Canada car and truck production through last Saturday was 2,463,073, compared to 2,222,319 a year ago.

Estimated U.S. car production was scheduled at 112,520 last week, up 2.9 percent from both the prior week and last year.

So far in 1992, U.S. car production is 1,194,146, slightly behind the same period last year when 1,205,499 vehicles were built.

In Canada, car production was scheduled at 17,269 last week, an increase of 9.5 percent from the prior week and a decrease of 33.2 percent from last year.

Year-to-date, Canada car production of 192,381 trails 1991 by 12.2 percent.

Truck production in the United States was estimated at 90,585 last week, an increase of 5.6 percent over the prior week and 42.4 percent over the 1991 week.

U.S. truckmakers have assembled 819,600 vehicles so far this year, an increase of 31.3 percent over the year-ago period.

In Canada, truck production was estimated at 22,797, down 1.5 percent from the prior week but up 19.9 over last year.

Truck production in Canada so far this year is 256,946, an increase of 48.0 percent from 1991.

General Motors' Lordstown, Ohio, truck plant completed production of Chevrolet and GMC full-sized vans today.

Production of the vans will be moved to Flint, Mich., in August 1993.

Employees from Lordstown van assembly will be transferred to assembly of J-cars, the Chevrolet Cavalier and Pontiac Sunbird, there.

Production at GM's Lake Orion, Mich., plant has been trimmed to a single shift until April 6. The plant makes the Cadillac DeVille and Oldsmobile Ninety Eight.

GM has extended the reduced production rate at the Buick City facility in Flint, Mich. For two weeks due to slow sales of the Buick LeSabre and the Oldsmobile Eighty Eight.

GM scheduled overtime at five truck plants last week: Janesville, Wis.; Baltimore; Moraine, Ohio; Scarborough, Ontario; and Oshawa, Ontario.

Ford Motor Co. ran daily overtime last week at the Kansas City, Mo., and the Louisville, Ky., truck plants.

Chrysler Corp.'s St. Louis truck plant worked two nine-hour shifts of overtime last Saturday.

Japanese union gets 4.87% raise

TOKYO — The Japanese Auto Workers Union and the negotiating team representing Japanese automakers reached agreement on a new annual contract that raises wages an average of 4.87 percent.

Management rejected union demands for an 8 percent increase and postponed action on demands for a higher overtime premium and a reduction in hours worked.

The 4.87 percent increase compares to a 5.62 percent raise last year.

The union had called for a boost in the 25 percent premium for overtime. The union also wanted automakers to reduce hours worked per year to 1,800 by the mid-1990s, compared to 2,100 hours now.

This year the the union was unusually aggressive, particularly on the work-hours issue, and received unprecedented support from the government.

Honda recalls 400,000 cars

TORRANCE, Calif. — American Honda Motor Co. Inc. is recalling about 400,000 of its 1982-85 Accords to replace corroded fuel fillers.

The cars are in areas where salt is used to clear roads. The salt may damage the protective coating on the fuel filler or breather pipe and allow salt water to collect. That could cause the filler and breather pipes to rust through and cause leaks when the fuel tank is filled or topped off.

BMW poised to build in U.S.

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — BMW AG, the German luxury-car maker, is "80 percent" decided on building a new car plant in the United States to produce a new model for worldwide export, the company's chairman says.

A decision on the plant, which likely would be located in Anderson, S.C., will be made "within four weeks," according to an unclassified U.S. government memo that relates a consular official's dinner conversation on March 20 with BMW Chairman Eberhard von Kuenheim.

"BMW Chairman . . . von Kuenheim (said) . . . that the company is 80 percent of the way toward deciding to open a new production facility in the U.S.," U.S. Consul General Andrew G. Thoms Jr. in Munich says in a memo to the U.S. Embassy in Bonn.

The Thoms memo, a copy of which was obtained by *Automotive News,* says the search for a new

Dealers order more cars

Stores prepare for spring and recovery

Automotive News

New-car dealers are ignoring the mid-March sales downturn and building inventory for the spring selling season and a sales recovery they anticipate.

Dozens of dealers interviewed last week reported ordering more cars and trucks than they did at this time last year. Some increased orders by 75 percent.

Optimism varies by make and region. Chrysler Corp. and Ford Motor Co. dealers are generally more optimistic than General Motors dealers; Big 3 dealers are more optimistic than import dealers because there is more recovery room for most U.S. makes.

Dealers, who pared car stocks in the downturn, are now more openly optimistic than their factories. They report more and better quality showroom traffic, which is slowly convincing factory officials that a recovery is stirring.

Chrysler Corp. expects steady, continuous improvement in the spring automotive market but not a strong, industrywide surge.

The credit-worthiness of shoppers has improved in the past 60 days, but consumers remain worried about unemployment, said Theodor Cunningham, Chrysler executive vice president of sales and marketing. He said the market "keeps getting better a little at a time."

Dealers' orders for April already match anticipated production schedules at all but one Chrysler assembly plant, Cunningham said.

"For the April production schedule, it looks like we will have all plants running," he said. "We have no downtime scheduled at this point, except one week of downtime at Toledo."

Chrysler's Toledo, Ohio, assembly plant, which builds the Jeep Cherokee and Comanche, will be down the week of April 27 because of a transmission shortage, Cunningham said.

Floor traffic in Chrysler's 4,900 dealerships is up but has retreated from the volume peak reached

Eaton: Chrysler must get leaner

Plans include fewer brands; 6-year product life cycles?

MARY CONNELLY
Staff Reporter

HIGHLAND PARK, Mich. — Less than two weeks into the job, Chrysler Corp. Chairman-designate Robert Eaton has absorbed a wealth of facts about the company and developed strong opinions.

Chrysler's new vice chairman already has previewed the company's future product plan, joined a 12-hour strategy session with corporate officers, and amassed a startling depth of detail about the automaker that he will head beginning Jan. 1.

Eaton, 52, joined Chrysler on March 16.

In an *Automotive News* interview, the former president of General Motors Europe outlined surprisingly well-developed views on critical issues facing Chrysler:

- Chrysler still has "a long way to go" to be a lean manufacturer even though it has cut costs by $3 billion. All makers have too many non-value-added activities, both in the plant and the office.
- Chrysler needs fewer brands. A reduction will increase brand awareness and help dealers in the U.S. market.
- Six-year product-life cycles are optimal. Spreading costs over that term gives customers better value than a four-year cycle.
- Even as Chrysler sells off part of its stake in Mitsubishi Motors Corp., Chrysler's relationship with its Japanese partner will continue.

Mitsubishi will sell cars from its Illinois factory to Chrysler through 1998.

- Chrysler is not "anywhere near exhausting" its potential market in Europe.

Eaton put the launch of Chrysler's new products atop his list of challenges facing the company. By 1995, the company will have replaced all of its car platforms, introduced a new full-sized

Japan: Debt leaves makers almost broke

MARY ANN MASKERY
Staff Reporter

TOKYO — After spending an estimated 5.5 trillion yen ($43 billion) on new cars and plants in the last five years, Japan's carmakers are virtually broke.

"Times have changed for the industry," says Keith Donaldson, who follows the industry for Salomon Brothers in Tokyo. "There is a weakness as a whole."

Donaldson said the industry's net debt-to-equity ratio averaged 55 percent last year, meaning that each $1 of shareholder's equity had claims against it of 55 cents. "That is a reasonable figure in Japan," he said. But take out industry giant Toyota Motor Corp., and the indus-

Toyota exec takes to the air

LOS ANGELES — James Press, a 22-year Toyota veteran, has been named the first president of Toyota Aviation Inc., a subsidiary of Toyota Motor Sales U.S.A. Inc.

Toyota Aviation, founded in 1989, is a $22 million operation based in Long Beach, Calif. It runs AirFlite Inc., which sells and services private planes. Toyota Aviation executives have said they would consider starting a charter airline business and have not ruled out doing design and manufacturing work as well.

Press, 46, was senior vice president and assistant general manager of Southeast Toyota Distributors Inc., an independent distributor. He also has managed Toyota Motor Sales' Cincinnati and San Francisco regions and has worked at the headquarters.

Press will report to Toyota Motor Sales President Yuki Togo, an avid aviator.

— Kristine Stiven Breese

Peugeot names service chief

LYNDHURST, N.J. — Peugeot Motors of America Inc. has named Serge Banzet president of its U.S. service operation.

Banzet, 42, was manager of a Peugeot-owned dealership in Strasbourg, France. He replaces Jean-Louis Saint Sevin, who has returned to France to become manager of subsidiary administration at Peugeot's Export Division.

3 trucks stung in U.S. crashes

WASHINGTON — The government's latest 35 mph crashes showed potential risk of serious head injury in Chevrolet and Dodge pickups and the Chevrolet Sportvan.

The Chevrolet S10 pickup recorded "head-injury criterion" scores of 990 for the driver and 1,211 for the passenger in the National Highway Traffic Safety Administration's New Car Assessment Program. Scores below 1,000 indicate that serious head injury is unlikely.

The Dodge Dakota pickup had head-injury scores of 1,005 for the driver and 987 for the passenger. The Chevrolet Sportvan scores were 1,492 for the driver and 963 for the passenger.

The only car in the latest round of crashes, the Geo Metro, produced head-injury scores in the "unlikely" range. But the Metro's potential for injury to the driver's left leg was listed as possible.

— Max Gates

Volvo names Gyll president

GOTENBERG, Sweden — AB Volvo last week tapped the president of Procordia AB, the food and drug company it wants to merge with, as its new president.

Soeren Gyll will assume his new post May 13, replacing Christer Zetterberg, who will become Gyll's deputy. Gyll, 51, a marketing executive who has worked for Xerox and various steel and forestry companies, has little auto industry experience.

Volvo's car unit is the largest of its businesses, and it has lost money for the past five quarters. The company is in the midst of a cost-cutting and streamlining program.

Gyll described himself as "marketing oriented" and "used to restructuring companies."

Scheele to head Jaguar

COVENTRY, England — William Hayden, chairman and chief executive of Jaguar Cars Ltd., will retire tomorrow and be succeeded by Vice Chairman Nicholas Scheele, the company announced late last week.

Hayden, 63, who joined Jaguar in March 1990 as chief executive, spent more than 40 years with Ford Motor Co., which owns the luxury carmaker.

Hayden was credited with beginning a turnaround at Jaguar, which had been wracked with quality and production efficiency problems. Jaguar was a major part of Ford's $1.1 billion loss in Europe last year.

Hayden held several finance and manufacturing management positions at Ford of Europe before being named vice president of manufacturing for Ford of Europe in 1974.

Scheele, 48, was president of Ford of Mexico before joining Jaguar.

— The Associated Press

SE Toyota case ends in mistrial

An Alabama judge declared a mistrial in a case pitting a Toyota dealer against his distributor, Southeast Toyota Distributors Inc.

The trial ended after the plaintiff made statements about the wealth of Southeast Toyota owner James Moran of Deerfield Beach, Fla. In a pre-trial order, the judge said he would enforce a state law that says information about a defendant's wealth is irrelevant.

Moran's JM Family Enterprises controls a $3-billion-a-year conglomerate built around distributing Toyota products in Alabama and four other states. Ivy Corp., a former Toyota franchise holder in Anniston, was suing the distributor for $22.3 million for business practices that Ivy claims destroyed the business.

The suit is the second to come to trial among more than a dozen suits against the independent distributor. In another dealer suit against the Moran organization, a jury decided in favor of Toyota dealer Richard Beasley. Damages in that case are expected to be set this week.

— Lindsay Chappell

briefly

$2.1 million is low for pay

The UAW can grumble, but **General Motors** Chairman Robert Stempel was among the ranks of the grossly underpaid in 1990. His $2.1 million salary was 25 percent below the $2.8 million going rate for his job at a company the size of GM. So says executive compensation expert Graef Crystal in a column appearing in the April 14 issue of *Financial World* magazine. Crystal is an adjunct professor at the University of California at Berkeley Business School. He said his study of past proxy statements found that the salary of GM's chief executive officer closely tracked the company's performance from 1979 through 1990. "When they say their prayers at night, GM's shareholders ought to put in a good word for Bob Stempel and they ought to pray that his pay rises from $2.1 million a year to $10 million," Crystal writes. "Because if it does, GM shareholders will make a bundle."

FIRST IMPACT? — Some people think **GM** is skirting the issue of when in the mid-1990s it will introduce its battery powered Impact car. Not true. The first car will be ready Friday, Jan. 6, 1995, at 3 a.m. PST, says Kenneth Baker, manager of GM electric vehicles. He offered the scoop at a March 5 speech in Los Angeles when he said, "We need the infrastructure ready by the time of the first car. That's only 25,000 hours away. . . . Let's start making every minute count."

NOT-SO-SMART — Smart cars designed by **GM** can steer drivers away from clogged roads, but an executive discovered to his chagrin last week that they can't avoid every obstacle. GM Vice President Robert Frosch climbed into one of 100 Oldsmobile Toronados fitted with computers, video screens and other equipment that monitors highway conditions and plots the most efficient course to a given destination. The Associated Press reports that moments later, he ran over an orange traffic cone inadvertently left in front of the car. "I believe it has been crushed," Frosch said. But Frosch eventually made it to downtown Orlando, Fla., in fine time, following directions dictated by a Swedish-sounding computer voice nicknamed "Sven" by GM engineers.

SEMI-CRAZY — **Ford Division** is acting a little like those TV advertisers who say, "We must be nuts to sell at such low prices." The loaded Ford Thunderbird that goes for less than $16,000 in California may make its debut in other parts of the country. "We'll strongly consider doing it; we'd be semi-crazy not to do it," said Ross Roberts, general manager of **Ford Division.** Ford is testing the bargain-priced, fully loaded Thunderbird LX model only at dealerships in California. Roberts said since the program began in January, Thunderbird sales in California represent 30 percent of all T-bird deliveries in the United States. Before the program, Californians bought 19 percent of all Thunderbirds. Roberts said he's studying the cost of the program and will discuss the possibility of a national rollout with members of the Ford Dealer Council.

Roberts: "We'd be semi-crazy not to."

and future direction

AUTOMOTIVE MARKETING

About this report

After a decade in which quality drove the automobile market and Detroit's Big 3 chased the Japanese, vehicles now are essentially at par, according to J.D. Power & Associates, the guru of customer satisfaction. Detroit needs to get that message to buyers. Japanese importers need to hold on to customers without the advantage of being patently superior. Europeans, caught in the crossfire, must retain their niches. For each, marketing is ever more essential.

To examine marketing tactics and trends for model years 1992 through 1996, *Automotive News* and *Advertising Age* commissioned J.D. Power to conduct a proprietary survey of top marketing executives at auto companies and their agencies. Then, nearly two dozen veteran reporters and editors were assigned the task of finding out more—in Chicago, Detroit, Frankfurt, London, Los Angeles, Nashville, New York and Tokyo.

Advertising Age and *Automotive News*, news leaders in their respective industries and sister publications within Crain Communications Inc., combined forces for this Special Report. Average paid circulation for *Advertising Age* is 85,163; for *Automotive News*, 77,620. The report is part of both publications; we hope you find it profitable.

From the survey:

- **Don't sell ragtops** in a blizzard, and other lessons in learning regional tastes. **S-4**
- **'Safety first'** is no longer a crash course when it comes to developing ad message. **S-4**
- **As carmakers** cut costs, nagging incentives should come under control by mid-decade. **S-8**
- **Attention to** basics and ability to follow through wins admiration for Toyota. **S-14**
- **Respondents expect** six auto account reviews in the next two years. **S-16**
- **Cross-media packages** are easy to covet but hard to connect. **S-22**
- **All signals** look green, as environment concerns move to the front. **S-34**

J.D. Power & Associates in November and December 1991 surveyed the top advertising executives at 33 automotive manufacturing or marketing companies and a similar number of high-ranking executives at ad agencies serving them. A total of 206 executives were contacted; 71 responded. Responses were anonymous, but they reflected the desired mix: just under half were from agencies and just over half were from marketers. Some 46% represented Asian nameplates, 30% work for the Big 3 and 24% work for European nameplates.

Also inside:

- **Ignore the whining;** Big 3 get the hint and are listening to the constituency. **S-8**
- **The young copywriters** behind the agency wheels of some 'hot car' ads. **S-14; S-30; S-42; S-44**
- **From Acura to Volvo,** a complete list of carmakers, their agencies and ad themes. **S-17**
- **After the disastrous** '80s, The General prepares for the counterattack. **S-24**
- **Critical auto** issues vary by location; we take a region-to-region pulse. **S-24; S-26; S-50; S-51**
- **In Europe, image** is everything or, as exec says, 'Lexus, Infiniti are fantastic but lack class.' **S-52**

Inventing rules in unusual market

Tradition goes out the window as carmakers try anything to win in a 'replacement' category

By Raymond Serafin

Philip Guarascio's ideal marketing plan looks something like this: He'd park a General Motors Corp. vehicle in front of the home of anyone in the market for a new car or truck and hand over the keys for a trial spin.

"If I have a 70% assurance that you're going to buy a car in the next month, and I know you'll buy a compact sedan, and I have a fair shot at you [considering a GM product], then even though it would be expensive to get the car to your house, this could be the most efficient thing I could do," says Mr. Guarascio, GM's executive-in-charge of corporate marketing and advertising.

That sort of auto marketing isn't as farfetched as it might seem.

As auto companies and their agencies develop more information about consumers' buying patterns, lifestyles and media habits, the rifle-shot approach to marketing continues to grow—often at the expense of traditional media.

Strategies are in for a drastic change, according to an exclusive survey of key automotive marketing decision-makers conducted for *Automotive News* and *Advertising Age* by J.D. Power & Associates.

About three-fourths of automotive marketing dollars, excluding dealer and consumer incentive programs, are allocated to media placements, the survey found.

But while automakers per-

Marketing execs itch to fill the right niche

A veritable banquet of media choices awaits the forward-thinking car company

By John P. Cortez

As media choices multiply, automakers are picking their niches more than ever before.

According to the J.D. Power & Associates survey of automakers and their agencies, the use of niche media will continue to grow. Of those surveyed, 90% said niche media will be more important in the next five years, while 67.2% said mass media will grow less important.

Niche-media programs include direct mail, product-oriented videocassettes, rental cassette and movie theater commercials, "place-based" media in airports or grocery stores and advertising on computer information services such as Prodigy.

It's difficult to figure how much money automakers are devoting to niche-media-programs in general. As one example, General Motors Corp.'s Buick division devoted about 40% of the ad budget for its Roadmaster launch to such an effort.

McCann-Erickson Worldwide, Troy, Mich., agency for Buick, used a technique dubbed "McMapping" to target 4,900 specific ZIP codes for a magazine buy last year, and more recently used an incentive program for the Buick LeSabre in which targeted magazine subscribers received an ink-jetted card offering them a free video for taking a test drive.

"McMapping" allows the marketer to better understand the individual consumer through a five-step process that comprises demographic and lifestyle analyses, synthesized and tested data, and details of consumers' media choices, says Karen Ritchie, senior VP-director of media services at

Database marketing, 1996

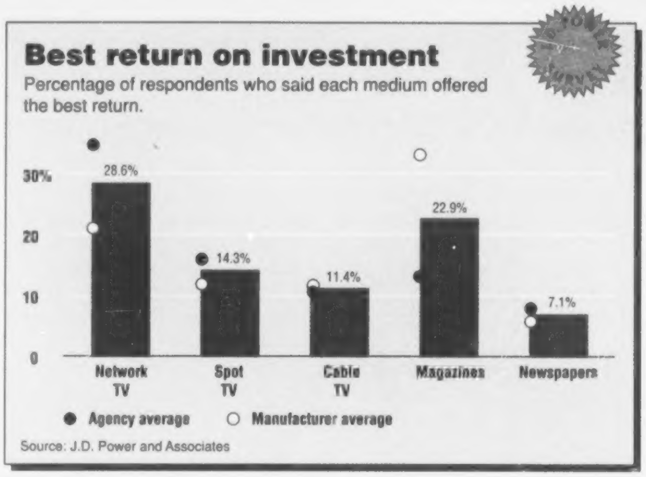
ceive media advertising as somewhat more effective than promotional efforts, they believe the differences have narrowed over the last five years and will continue to narrow in the next five years, according to the Power survey.

Automakers' changing strategies are blurring all the old distinctions in media. Advertisers and agencies are attempting to integrate various marketing tools, with less regard to fixed notions about the value of traditional advertising vs. disciplines such as sales promotion, direct marketing, event sponsorships and PR.



Best return on investment

Influence budgets

At GM, marketing divisions don't have ad budgets; they have "consumer influence" budgets.

"The way we define media is that it's all the tools or processes that let us create a communications link with the consumer," says Mr. Guarascio. Delivering a test car to a prospect's door thus becomes a media tactic.

Similarly broad attitudes about media are becoming widespread through the auto industry.

"There isn't one simple rule that applies to our media strategy," says James Julow, manager-advertising and media relations at Chrysler Corp.

Several converging factors make it more important than ever that auto marketers effectively use media even as it becomes more complex to develop successful media strategies.

The U.S. auto market has exploded with competitors over the last decade. New brands entered the fray, among them Acura, Range Rover, Lexus, Infiniti, Saturn and Hyundai. Sterling came and went, a pattern Daihatsu is repeating. Peugeot dropped out, but new dealer networks are being organized to sell the likes of Amati, Kia and even a street-legal version of the Hummer military vehicle.

600 to chose from

Many of the recent entrants are niche players, and the number of car and truck models has proliferated, totaling more than 600 now, according to some estimates.

Only a relative handful of models sell in large volumes anymore. In the mid-1960s, Chevrolet sold about 1.5 million Impalas in a single year. Last year's top selling vehicle was the Ford F-series pickup, at 442,311 units.

A mature, essentially replacement, market means a company can grow only by taking share from a rival; but now there are more rivals than ever to divvy up the share.

Confusion reigns

Meanwhile, more consumer choice also means more confusion.

All this is taking place as network TV rapidly loses its once overwhelmingly dominant position as an advertising medium. And TV itself now includes a fourth broadcast network plus cable TV.

New media possibilities have emerged, such as personal computers, home videos and out-of-home media that reach consumers in places such as airport terminals, doctors' offices and health clubs.

"You just don't have the Beav and Ward and June watching TV together from 8 to 11 prime time," says Tom Somerset, senior VP-director of marketing services in the Santa Ana, Calif., office of Foote, Cone & Belding, agency for Mazda Motor of America. "You have to identify the prospects and follow them through the day."

Traditional media still figure importantly in auto marketing plans, but they're being looked at in non-traditional ways.

A media switch

"We're really looking at far more targeting and less use of media in a mass way. It doesn't mean we won't use mass media, but we'll use it in a more targeted way," says Richard O'Connor, chairman-ceo of Lintas:Campbell-Ewald, Warren, Mich., agency for GM's Chevrolet division.

The old cost-per-thousand standard for buying media has been reinterpreted as databases enable marketers to pinpoint how to reach specific prospects.

"We no longer look at gross households. What we look at is the targeted cost," says Chrysler's Mr. Julow. "If you have great confidence in what you know, it can wildly change the CPM."

Chrysler, which is re-examining its media strategy, is considering dropping out of prime-time network TV advertising because other media offer more targeted audiences, says John Damoose, VP-marketing.

McCann-Erickson.

"What comes out," she says, "is a scope that is much broader than 'Do I use cable TV to reach this target?' "

One reason for the growth in niche media is that accountability methods have improved somewhat. Accountability and evaluation are an important aspect of niche marketing.

"There's been a tremendous increase in accountability the last four or five years—it means knowing what works and why, and what things don't work, and why," says GM's Philip Guarascio, executive-in-charge of corporate marketing and advertising. "A lot of our efforts have been directed at understanding the value of [media] tools, creating situations and defining what the mix should be.

"If you look at GM budgeting from a share standpoint," he continues, "nontraditional media are increasing at a faster rate [than in the past]."

Not all automakers are accepting the accountability of niche media, however.

"One of the inherent problems with niche-marketing opportunities is evaluation," says Joseph Caponigro, senior VP-director of media services at Dodge agency BBDO Worldwide, Southfield, Mich. "We can 'guesstimate' numbers, but it is difficult to ascertain audience measurement."

A positive price/value relationship must be demonstrated for a company to invest in a niche medium, says Robert Mancini, senior VP-director of media services at J. Walter Thompson USA, Detroit, agency for Ford Motor Co.'s Ford Division.

"Sometimes you're willing to pay a premium to get a very specific audience that has a much higher propensity to buy your product in an environment that you can't get anywhere else," he says. "For a mass marketer, it makes sense to target for a specific product, but it won't be done at the expense of the mass media budget."

Evaluating the success of a niche-media buy from sales figures is "futile," says Ben Hilverda, director-marketing for Audi of America.

The European auto importer, which also uses a ZIP code-targeted magazine schedule, includes a toll-free number in its advertising to measure response. For the launch of the Audi 100, the 800 line received 60,000 calls in six weeks.

Despite its increased significance, niche media haven't captured all marketers' affections.

Ford Motor Co. was among the first automakers involved in both the Checkout Channel, an in-supermarket, place-based medium run by Turner Broadcasting System and Prodigy, the joint-venture, on-line computer service of IBM Corp. and Sears, Roebuck & Co. But the automaker won't be spending significant portions of its ad budget on niche media in the near future, says John Vanderzee, advertising manager for Ford Division.

"Home video advertising, doctors' offices, Airport Channel, grocery stores—we've had proposals from everyone," says Mr. Vanderzee. "We have yet to find one that makes a lot of sense to us. People sitting in an airport waiting for a flight, [or] at a supermarket checkout counter, they're not looking at it, from what we can see. It's not conducive to what they want to do. They want to get out of that line as quickly as they can."

"Niche media can go all the way to toilet stalls," he says. "I can tell you we'll probably not get involved in any of it."

Many industry observers

Don't sell ragtops in a blizzard

In battle for share, carmakers acquire a feeling for regional tastes

By Raymond Serafin and Cleveland Horton

When Ford Motor Co.'s Ford Division began its regional test last fall of a one-price/one set of options strategy for Escort, it equipped the cars with air conditioning, AM-FM stereo radio and rear-window defroster.

But dealers and marketing officials in the Southeast wanted different options to suit their buyers' preferences, and Ford, traditionally slow to adapt to regional change, went along with it.

Hence, the $9,995 Escorts bound for the Southeast were given a cassette player instead of the defroster that went in those bound for the West and Northeast.

"That was seen as a better value in that area," says Keith Magee, Ford Division's general marketing manager.

That also illustrates one of the growing trends in automotive marketing—the regionalization of approaches involving product, communications messages and media usage.

The J.D. Power & Associates survey of key auto marketing decision makers reflects that trend.

Spot TV will receive the largest spending increase of all media in the 1992 and 1993 model years, according to the Power survey, conducted exclusively for *Advertising Age* and *Automotive News.*

THE HEARTBEAT OF AMERICA IS WINNING.

Because "Texas is a huge market for Suburbans," regional Lintas:Campbell-Ewald ads hail it as "the national car of Texas."

The reliance on spot TV might reflect automakers' desire for flexibility in an uncertain marketplace, says Dick O'Donnell, president of automotive media consultancy O'Donnell Strategy Group.

"In hard times, marketers don't want to make as many long-term commitments," he says. "With spot TV, they don't have to make a buy three or six months ahead, and they can pinpoint customers in specific markets very efficiently."

Automotive advertising typically consists of three tiers: The manufacturer or importer produces national advertising; individual retailers handle their own advertising, usually oriented heavily to price; and somewhere in between, dealers for a particular brand in a given area pool funds, usually with factory help, to create advertising that's usually promotion-oriented and runs on broadcast outlets that most individual dealers can't afford to use.

Variations on how regional ad groups operate have cropped up recently, and in some cases a distinctly separate new tier of regional advertising has begun to appear, as marketers get down to a market-by-market slugfest for share.

Some of the technology developed in the 1980s allowed

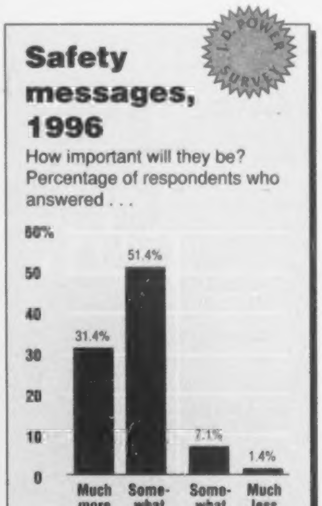
'Safety first' ad thinking no longer a crash course

By Joseph Bohn

For decades, the idea that "safety doesn't sell" rang through automotive marketing circles—because safety didn't sell.

Ford Motor Co. unsuccessfully tried marketing "safety packages," including seat belts offered as a $20 option, in the early '60s. In 1974, General Motors Corp. found few takers for its first airbags.



Safety messages, 1996

How important will they be? Percentage of respondents who answered . . .

No answer: 8.6%

Source: J.D. Power and Associates

Even as recently as a few years ago, consumers worried about airbags going off accidently or hitting them in the face, says Bob Gillooly, Ford Division car advertising manager.

Today they're prominent in auto ads, as safety has become an integral part of the industry's pitch to a receptive audience of aging baby boomers.

According to the *Automotive News/Advertising Age* J.D. Power & Associates survey, about 43% of executives at the Big 3 automakers and their agencies say safety messages will become much more important over the next five years.

Asian and European carmakers agree, though not as strongly (25% and 30%, respectively, said it would be much more important).

Safety messages are widespread already. Some examples:

- Volvo Cars of North America, one of the earliest and strongest safety promoters, quotes a man who attributes his survival of an accident to his wife's Volvo in a TV spot created by Messner Vetere Berger Carey Schmetterer, New York, part of an extensive campaign. "There are certain moments when your entire world becomes crystal clear," says the advertising.
- Saturn Corp. also is running an ad via Hal Riney & Partners, San Francisco, that talks about favorable word-of-mouth publicity from an accident survivor.
- Toyota Motor Sales USA offers the "43 Best Reasons" for driving a Previa minivan—its conformity to 43 federal car safety standards—in a campaign handled by Saatchi & Saatchi DFS/Pacific, Torrance, Calif.
- Ford Division is capitalizing on the availability of dual airbags. It features two side-by-side airbags in its ad campaign for Taurus and is also promoting airbag availability in its Econoline and Club Wagon ads.
- General Motors is focusing on anti-lock brakes. A new low-cost system has enabled GM to put them in 49 of its 57 car and light-truck lines.

THERE'S ONE PERSON WHO'LL APPRECIATE TAURUS' NEW SAFETY FEATURE AS MUCH AS YOU DO.
YOUR PASSENGER.
Ford Taurus now offers dual air bags-a Ford Motor Company exclusive in this class.
Ford Motor Company has sold more cars and trucks equipped with air bags than anyone else.
HAVE YOU DRIVEN A FORD LATELY?

Ford ads from J. Walter Thompson USA promote side-by-side airbags in Taurus and note Ford's No. 1 position in sales of vehicles with airbags.

Safety is an especially big concern to women, who now buy nearly half of all vehicles, automotive marketers say.

Women relate items like power door locks to safety because "in a bad situation it gives them control. They can make sure all the doors lock quickly," says Karen Ebben, Oldsmobile division director of consumer marketing.

Safety is also more important to older people. Thus, full-size and family cars such as Crown Victoria, Chevrolet Caprice and Olds Ninety Eight and Eighty Eight play it up more extensively than do smaller, sportier models.

But the proliferation of safety messages concerns some automakers.

Chrysler, which standardized airbags on all cars built in the 1990 model year, isn't playing them up as much as it once did because they're no longer as distinguishing. It only promotes them wherever they convey an advantage.

With so many auto manufacturers promoting safety, Volvo last year commissioned its then-new ad agency, Messner Vetere, to find out whether safety should still be its marketing theme.

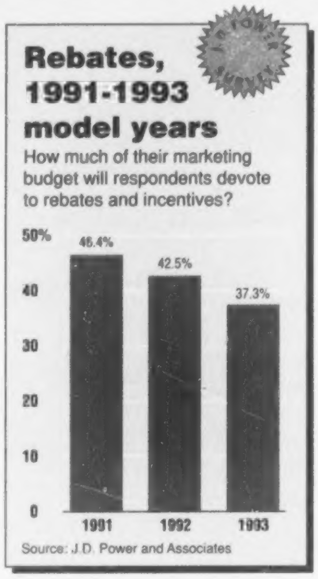
The research showed safety to be the most important consideration for Volvo buyers, says Bob Austin, director of communications. But it also showed that many non-Volvo buyers believed all cars were equally safe.

That has led the company to fight what Mr. Austin calls "overly simplistic" safety pitches.

Despite its concerns about competitors' safety messages, Volvo is running another campaign that says: "An airbag is only as good as the car it's attached to." ☐

Incentives stay put—at least until the mid-'90s

As carmakers cut costs, that most nagging facet will come under control



Rebates, 1991-1993 model years

How much of their marketing budget will respondents devote to rebates and incentives?

Source: J.D. Power and Associates

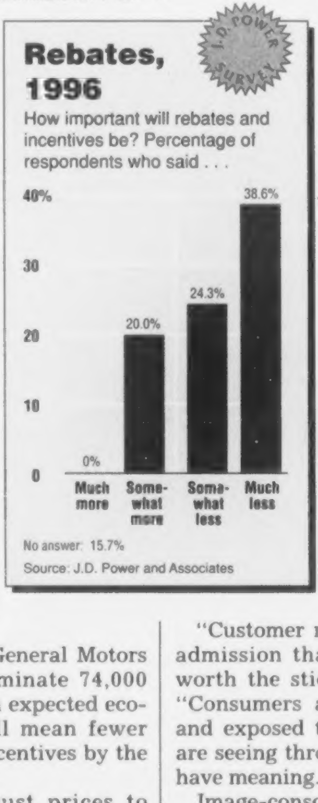
By Arlena Sawyers

Automakers want to break away from incentives, but they can't kick the habit.

J.D. Power & Associates found that 77% of auto and agency executives believe incentives will be less important by 1996.

The survey also showed that executives predict a steady decline in dollars allocated to incentives through the 1993 model year.

For the time being, however, the parade of incentives continues. About 90% of the cars and trucks marketed in the U.S. offer incentives averaging $1,498 each, says Suzanne Kinsler, managing director of Autofacts Inc., an automotive information, research and planning consultancy.



Rebates, 1996

How important will rebates and incentives be? Percentage of respondents who said . . .

No answer: 15.7%

Source: J.D. Power and Associates

Using her figures, the industry spent about $16.5 billion on consumer and dealer incentives last year.

Susan Jacobs, president of Jacobs Automotive, a marketing forecasting and planning agency, attributes the current glut of incentives to the recession and excess production capacity.

But she predicts automakers will be able to move away from incentives by mid-decade.

How? She thinks General Motors Corp.'s plans to eliminate 74,000 jobs, coupled with an expected economic recovery, will mean fewer and less bountiful incentives by the mid-1990s.

"Incentives readjust prices to market clearing level," Ms. Jacobs says. "By 1994 or 1995, GM's excess capacity will be gone; with a strong recovery that will eliminate blanket incentives. After that, incentives will be more of a tactical move."

Rick Lepley, VP-sales and marketing at Mitsubishi Motor Sales of America, agrees there is no way incentives can remain at current levels.

"When you look at the losses, they can't continue to incentivize at the same levels," he says.

Several automakers already have managed to move away from incentives, while others have disguised them. American Honda Motor Co., for example, offers the least generous incentives among non-luxury car marketers, averaging less than $500 per unit, according to Autofacts.

Volkswagen U.S. got out of the customer rebate business about two years ago and recently started an innovative consumer payment protection program.

Under the program, VW agreed to pay its customers' car and insurance payments for up to a year if they are laid off from their jobs.

Marketing Director David Schembri says he sees an end to "meaningless" incentives, not because of an economic recovery but because consumers see right through them.

He believes value-added incentives will become more popular with marketers in the 1990s.

"Customer rebates are almost an admission that the vehicle is not worth the sticker price," he says. "Consumers are smart, well-read and exposed to the industry. They are seeing through offers that don't have meaning."

Image-conscious importers of European luxury cars seldom offer cash directly to the consumer. Instead, they direct cash to the dealer or offer special cut-rate loans or leases to the consumer.

Last year, Rolls-Royce Motor

Detroit's finally learning the hard lessons

Ignore the whining; Big 3 get the hint and are listening to the constituency

By Joseph M. Winski

In this recession—as in the one a decade ago—automakers have emptied their gimmick bags.

They've adopted, cursed, sworn off and again adopted rebates. They've tinkered with warranties and financing deals (less critical this time because interest rates are so much lower).

COMMENTARY

Detroit has again blamed the Japanese for its problems, going so far this time as to send the U.S. president and Big 3 honchos to Tokyo to bash and beg at the same time.

But the sound and fury of the short-term stunts and constant carping obscure what may be the beginnings of fundamental change in the way Detroit markets cars.

Lacking total marketing

Eight decades after Henry Ford told Americans they could have the Model T in any color they wished as long as it was black, U.S. automakers are finally getting it: What the consumer wants does matter.

They're learning this from the masters of understanding the U.S. customer, Japanese carmakers, who have proven to be as savvy at marketing as they are at production.

"There are spots where I see some signs of real improvement" in Detroit's marketing approach, says Laurel Cutler, worldwide director of marketing and planning at Foote, Cone & Belding, New York, and former Chrysler Corp. VP-consumer affairs.

Though the Big 3 together spent $2.65 billion on advertising last year, not to mention rebates and other costly promotions, advertising and promotion are but a small part of total marketing. In the basic sense of marketing, which *starts* with consideration of the consumer, "Detroit has not marketed at all," Ms. Cutler says.

In addition to producing inferior cars—its most grievous marketing sin—Detroit long had a production/-finance orientation that blinded it to emerging consumer wants, causing it to miss promising market niches. These lapses range from failing to provide quality small cars during the gasoline shortages of the 1970s to ceding much of the luxury car market in the 1980s, first to German companies and then to upscale Japanese models like Toyota Motor Corp.'s Lexus and Honda Motor Co.'s Acura.

The Big 3 insist they're no longer giving marketing short shrift. Like the best Japanese companies, the Big 3 say, they're integrating marketing into the product development process early on and listening to what marketers and consumers have to say every step of the way.

Chrysler, which last year suffered the embarrassment of dropping to fifth in U.S. car sales behind Honda and Toyota, is making the most public proclamations of reform.

In ad spreads signed by Chairman Lee Iacocca, the company boasts it has done nothing less than "reinvent" the way it makes cars. "And what drives the system is the voice of the customer," the ad claims.

- **Power survey respondents rate Toyota tops in marketing—Page S-14.**
- **GM's massive remodeling and how marketing fits in—Page S-24.**

Fewer oohs-and-aahs

That represents a sea change for Detroit. It has been practically a U.S. automaker tradition to build the cars they wanted and complacently stand back to watch consumers ooh-and-aah at the annual new-model debuts.

Early attempts by the Japanese to crack the market, such as Toyota with its dismal Toyopet in the 1950s, only heightened Detroit's sense of invulnerability.

But as Philip Kotler, Northwestern University marketing professor, has documented in his 1985 book, "The New Competition," Toyota was learning from its mistakes.

Encouraged by the Japanese government, which singled out automobiles as one way to build a strong export-based economy, Toyota spotted room for well-made, reliable small cars. When the 1974 Arab oil embargo hit, Toyota—and to a lesser extent Honda and Nissan Motor Co.—were ready to please a market suddenly clamoring for good, fuel-efficient vehicles.

Detroit, stuck with acres of big cars it couldn't sell, shrugged. Pure luck, it said of the Japanese suc-

(Continued on Page S-44)

Dartboard dealin' hits target

By Arlena Sawyers

Even as they vow to move away from incentives, automakers are constantly looking for ways to strengthen their programs so they stand out from the crowd.

Several car companies have found some marketing muscle in regional incentives.

Among them is Mitsubishi Motor Sales of America, which largely shuns national incentives. Rick Lepley, VP-sales and marketing, says the company leaves most incentive decisions to its five regional managers because they know their markets better than anyone else.

For instance, Mitsubishi's Northeast region often puts its most generous incentives on Galant, popular with lower-middle-income buyers in that area. The Southeast and Southwest regions usually put their incentive might behind pickups, which are favorites in those areas.

To attract a certain kind of customer, many manufacturers offer narrowly defined discounts as well.

General Motors Corp., for example, offers $400 rebates to military personnel and military spouses who buy or lease eligible GM cars and trucks. A Buick ad in the October/November issue of *Modern Maturity* included a coupon worth $400 off the price of any Buick to consumers age 50 and older.

In addition, automakers often offer a special discount to their own customers or owners of competitive models. Earlier this year, owners of Ford Motor Co. vehicles were eligible for $1,000 rebates if they purchased certain full-size models.

But not every incentive comes in the form of cash.

Subaru of America took some money it used to spend on incentives and added extra standard equipment to its 1992 Legacy. The least expensive 1992 Legacy, $12,999 with a $500 built-in rebate, now has power windows and locks, air conditioning and a stereo cassette player as standard. That makes the 1992 model $1,420 less expensive than a similarly equipped 1991 model.

Mazda Motor of America is running a similar program. It offers a $1,000 rebate plus either free air conditioning or free automatic transmission on 1992 Protege, 626 and MX-6 cars.

Chris Wackman, Subaru VP-marketing, says such programs give consumers value for their money.

"The customer feels that he's buying value, not just the best rebate," says Mr. Wackman. ☐

Incentives

(Continued from Page S-8)

Cars and Jaguar Cars disguised incentives as offers to pay the luxury tax.

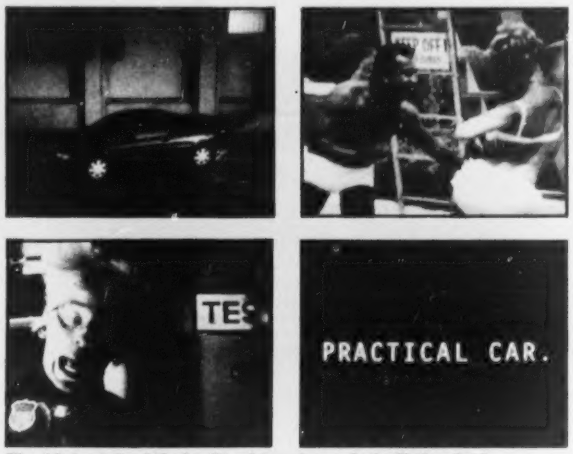
Importers of Audi, Saab and Nissan Motor Corp. USA's Infiniti division give their customers a break with cut-rate leasing. Such deals often cover all scheduled maintenance, all for less than a regular loan payment.

There are even signs that the biggest sellers are struggling to move away from customer rebates, too.

In February, Ford Motor Co. and Chevrolet reduced incentives on some models. These don't quite signal the demise of Detroit's addiction to incentives, but at least automakers are trying. ☐

Who did that ad?

The young copywriters behind the agency wheels of some hot cars.



The blatant "subliminal" ad touch carried off the dual personality of the Toyota Paseo.

Writer sporty —and practical

Leisa Odom is having fun in the male-dominated world of automobile advertising.

The 30-year-old copywriter at Saatchi & Saatchi DFS/Pacific, Torrance, Calif., scoffs at the notion that guys are more mechanical and better suited to complex issues like the internal combustion engine.

"That's crap. I grew up on a farm. Go to my house and see who rewires the electrical sockets and hooks up the VCR. I do, my boyfriend doesn't."

She knows her way around a car, too. "I grew up changing my own oil. I can change a flat and I can do that kind of stuff. I wouldn't say I'm a buff, but I certainly can get by and I drive a sports car."

Odom

Being female hasn't held her back while working on Saatchi's Toyota account. "I don't let that interfere. It's not a plus or a minus either. If you get the best idea, the best person wins," she says.

Ms. Odom was the writer on the campaign that used an edge of subliminal advertising to introduce the Paseo as both a practical and sporty little car.

"It was a wonderful opportunity with the launch," she says. "We had to create a personality for this car and it was a perfect demographic for an irreverent tonality. And we did that. I think it's been very successful in positioning the car."

The TV commercials have been well received, and one of the spots won a Mobius award from the U.S. Festivals Association.

"My head has swollen up a lot since the Paseo [campaign broke]. It's made me feel great because some of the comments I've gotten have been unsolicited. I had a couple of people walk up to me in the gym. They knew I worked in advertising and they asked if I'd seen the new Paseo stuff. They didn't know that I wrote it."

Now she's hooked on car advertising.

She applied for work on the Toyota account about a year ago, while working in Saatchi's New York office.

"I wanted to get a wide body of work. I always thought cars would be kind of hard, but fun, too. I came out [to California] for six months and liked it so much I begged to stay. I chained myself to my furniture and they said OK." ☐

—Jon Lafayette

Toyota takes a bow in survey

Attention to basics and ability to follow through wins competitor admiration

By Cleveland Horton

It's hard to quibble with success.

When asked to identify the most outstanding automotive marketer, most automaker and agency executives name Toyota Motor Sales USA.

The leading Asian importer received top marks in four of five specific marketing areas, according to the exclusive J.D. Power & Associates survey conducted for *Automotive News* and *Advertising Age*.

Those marks represent a surprising consensus in the highly competitive industry. Survey respondents couldn't nominate their own or their client's brand.

Industry envy

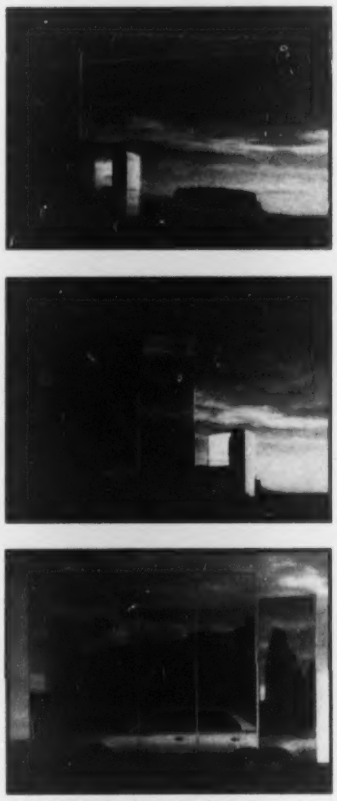
The results highlight the auto industry's envy of Toyota's formidable marketing machine. Additionally, Toyota's Lexus division was named No. 1 in terms of creative (*see chart below*) and No. 2 behind Toyota in its use of media and promotions.

Toyota's advertising is handled by Saatchi & Saatchi DFS/Pacific, Torrance, Calif., while the advertising for Lexus is from Team One, El Segundo, Calif., a Saatchi subsidiary created to handle the new division.

Agency consistency could be one factor in Toyota's high rating; the Japanese import basically has had but two ad agencies since its U.S. introduction in 1958. Its first agency was Clinton E. Frank Inc., a Chicago-based agency, and the account was moved to the larger Dancer-Fitzgerald-Sample in 1975. Dancer was acquired by London-based Saatchi in 1986 and soon merged with Compton Advertising under the Saatchi name.

Toyota "overall has as much marketing [staff] as does Ford or Chrysler," says George Peterson, president, AutoPacific Group, a consultancy.

"They are the Philip Morris of the automotive industry," says Larry Postaer, principal and exec VP-creative director, Rubin Postaer & Associates, Los Angeles, agency for American Honda Motor Co.



Toyota is putting massive advertising support behind its Camry midsize sedan, devoting $120 million to push the car.

Models linked

But unlike the cigarette and package-goods marketer, Mr. Postaer adds, Toyota links many of its vehicles to a single brand.

"Because their truck and car [advertising] is so tied together, unlike anyone else, they benefit strongly from that. They're omnipresent."

High awareness

Indeed, Toyota's "I love what you do for me" tagline, used for both cars and trucks and now going into its third year, led to high awareness and "the whole mystique of the brand," says Bill Hagelstein, exec VP-general manager, Foote, Cone & Belding, Santa Ana, Calif., which handles Mazda Motor of America.

While most automotive marketers have focused on saving money during the current recession, Toyota has been able to dig deep into the pockets of its corporate parent to make sure every aspect of a marketing program is covered.

"From everything we can tell," Mr. Peterson says, "they have determined what the attributes are to do very solid marketing programs for their product . . . When they decide to market a car, they check all the boxes. If something is necessary, they'll invest to make sure that that happens."

In the area of promotions, Toyota is aggressive in its "sale-a-thons," supporting them with heavy advertising as well as enticing rebates.

In the Power survey, auto executives named Toyota No.

(Continued on Page S-48)

Shops better look over their shoulders

Expect six auto account reviews in two years: Survey

By Jon Lafayette

Ad agencies looking for a car account should keep their motors running.

The J.D. Power & Associates survey conducted for *Automotive News* and *Advertising Age* shows 14.3% of auto executives said an agency review is very likely within the next two years.

Another 7.1% said a review is somewhat likely, leaving 62.9% very unlikely and 11.4% somewhat unlikely to have a review. The remaining 4.3% had no answer.

While 7.1% and 11.4% might seem small, the percentages are significant because they indicate six of the roughly 30 major automobile ad accounts in the U.S. could be up for review in the next two years.

More musical chairs

That would rival the wheel-spinning pace with which carmakers have been playing musical chairs with ad agencies over the past year.

During that time, Subaru of America moved from Levine, Huntley, Vick & Beaver, New York, to Wieden & Kennedy, Portland, Ore.; American Isuzu Motors went from Della Femina, McNamee, Los Angeles, to Goodby, Berlin & Silverstein, San Francisco; Volvo Cars of North America from Scali, McCabe, Sloves to Messner Vetere Berger Carey Schmetterer, both New York; and Mercedes-Benz of North America drove to Scali, McCabe, Sloves from McCaffrey & McCall, also New York.

These changes represent the shift of about $270 million in car ad billings. That's a lot of hubcaps.

Since the survey was done, Jaguar Cars put its $15 million-to-$20 million account up for review. Yugo America was already in the process of selecting a new agency, and Kia, a Korean carmaker, is looking for a shop to introduce its products to the U.S.

No room for security

As the auto industry struggles with the recession, it's not surprising so many agencies have lost auto accounts. And since the economy still hasn't picked up, the agencies that survived 1991 shouldn't feel too secure.

Ad agency executives think imports are the most likely car accounts to go up for review in the next year. BMW of North America and Nissan Motor Corp. USA's Infiniti division are among the marques most frequently mentioned, either because of poor results in the marketplace or instability at the agency.

But the big money is in Detroit. Some agency executives believe domestic automakers ought to shake up their agencies, but they aren't so sure the stranglehold longtime Detroit shops have on the business can be broken.

Jerry Della Femina, chairman of Della Femina, McNamee, looking for a car account after losing Isuzu,

In the six-county Northeastern Illinois NICA, there's a big, bright new window of opportunity for automotive advertisers--the Sun-Times Newspaper Network, made up of Chicago's number one selling newspaper and 57 paid suburban papers (38 Pioneer Press and 19 Star newspapers).
In every key category, we outdistance the daily Tribune by miles. (Just read the numbers above to see just how broadly that claim sticks.)
Options? We give you over 30 buying combinations, so that you can reach any target-marketing destination.
Ease of handling? Just one insertion order, one invoice, one piece of artwork and one sales representative gets you there, without ever once shifting gears.
So call Nick Paloumpis at 312/321-2950 and roll out your campaign where it covers the most territory and gets the best budget mileage.

RESOURCE CENTER

A comprehensive guide to auto marketers, their agencies and current advertising themes.

ACURA
Ad agency: Ketchum Advertising, Los Angeles
Since: 1986
Ad theme: ``Acura. Precision-crafted performance.''
Since: 1986

ALFA ROMEO
Ad agency: Ross Roy Inc., Bloomfield Hills, Mich.
Since: 1989
Ad theme: ``The legendary marque of high performance.''
Since: 1990

AUDI
Ad agency: DDB Needham Worldwide, Troy, Mich., and Chicago
Since: 1969
Ad theme: ``Take control.''
Since: 1991

BMW
Ad agency: Ammirati & Puris, New York
Since: 1975
Ad theme: ``The ultimate driving machine.''
Since: 1975
Direct marketing agency: Orsatti & Parrish, Boston
Since: 1991

CHRYSLER CORP.
Chrysler Corporate
Ad agency: Bozell, Birmingham, Mich., and New York
Since: 1979
Ad theme: ``Advantage: Chrysler'' and ``In the car business, you lead, follow or get out of the way.''
Since: 1990; 1992

Corporate minority advertising
Ad agency: Lockhart & Petus, New York
Since: 1987

Chrysler corporate and divisional merchandising (except for Jeep/Eagle)
Ad agency: Ross Roy Inc., Bloomfield Hills, Mich.
Since: 1926

Chrysler brand
Ad agency: Bozell, Birmingham, Mich., and New York
Since: 1979
Ad theme: ``The perfect balance between self-indulgence and common sense.'' and ``Advantage: Chrysler.''
Since: 1991; 1990

Plymouth
Ad agency: Bozell, Birmingham, Mich., and New York
Since: 1979
Ad theme: ``Plymouth. Intelligent machines'' and ``Advantage: Plymouth.''
Since: 1991; 1990

Dodge
Ad agency: BBDO Worldwide, Southfield, Mich.
Since: 1982
Ad theme: ``Advantage:Dodge.''
Since: 1990

Jeep
Ad agency: Campbell-Mithun-Esty, Southfield, Mich.
Since: 1960
Ad theme: ``There's only one Jeep'' and ``Advantage:Jeep.''
Since: 1990 (both)

Eagle
Ad agency: Campbell-Mithun-Esty, Southfield, Mich.
Since: 1987
Ad theme: ``Advantage:Eagle.''
Since: 1990

DAIHATSU
Ad agency: Kresser/Craig, Los Angeles
Since: 1988
Ad theme: ``It's how we make them.''
Since: 1990

FERRARI
Ad agency: Hank Forssberg Advertising, Hackensack, N.J.
Since: 1979
Ad theme: ``The tradition continues.''
Since: 1989

FORD MOTOR CO.
Ford Corporate
Ad agency: Wells Rich Greene BDDP, Detroit and New York
Since: 1979
Ad theme: ``Quality is Job One. It's working.''
Since: 1981 for ``Quality is Job One.'' The ``It's working'' was added in 1992.

Ford
Ad agency: J. Walter Thompson USA, Detroit
Since: 1943
Ad theme: (car): ``Have you driven a Ford lately?'' (truck): ``The best never rest.''
Since: (car): 1983 (truck): 1990

Lincoln
Ad agency: Young & Rubicam, Detroit
Since: 1979
Ad theme: ``What a luxury car should be.''
Since: 1984
Direct marketing agency: Y&R/Wunderman Worldwide, Detroit.
Since: 1981

Mercury
Ad agency: Young & Rubicam, Detroit
Since: 1979
Ad theme: ``All this and the quality of a Mercury.''
Since: 1989
Direct marketing agency: Y&R/Wunderman Worldwide, Detroit.
Since: 1981

Lincoln-Mercury minority advertising
Ad agency: UniWorld Group, New York
Since: 1986

GENERAL MOTORS
Buick
Ad agency: McCann-Erickson Worldwide, Troy, Mich.
Since: 1958
Ad theme: ``Buick. The new symbol for quality in America.''
Since: 1990

Cadillac
Ad agency: D'Arcy Masius Benton & Bowles, Bloomfield Hills, Mich.
Since: 1935
Ad theme: ``Until now.''
Cadillac Seville: ``Until Seville.''
Since: 1991
Sales promotion/Direct marketing agency: DMB&B PR, Intergroup Marketing & Promotions, both Bloomfield Hills, Mich.
Since: 1982

Ad agency: Lintas:Campbell-Ewald, Warren, Mich.
Since: 1989
Ad theme: (car) ``Get to know Geo.''
Since: 1989
Sales promotion/Direct marketing: Lintas: Marketing Communications
Since: 1989

GMC Truck
Ad agency: McCann/SAS, Troy, Mich.
Since: 1990
Ad theme: ``The strength of experience.''
Since: 1991

Oldsmobile
Ad agency: Leo Burnett USA, Southfield, Mich., and Chicago
Since: 1967
Ad theme: ``The power of intelligent engineering.''
Since: 1991

Pontiac
Ad agency: D'Arcy Masius Benton & Bowles, Bloomfield Hills, Mich.
Since: 1934
Ad theme: ``Things are different. Things are better.''
Pontiac Bonneville: ``A higher level of excitement.''
Pontiac Grand Am: ``A new kind of excitement.''
Since: 1992
Sales promotion/Direct marketing: DMB&B PR, Intergroup Marketing & Promotions, both in Bloomfield Hills, Mich.
Since: 1982, for both

Saturn:
Agency: Hal Riney & Partners, San Francisco
Since: 1988
Ad theme: ``A different kind of company. A different kind of car.''
Since: 1990

GM Corporate:
Ad agency: N W Ayer, Detroit; D'Arcy Masius Benton & Bowles, Bloomfield Hills, Mich.; McCann-Erickson Worldwide, New York, for consumer market development
Since: 1973 (Ayer); 1965 (DMB&B); 1990 (McCann)
Ad theme: ``Putting quality on the road.''
Since: 1990

Corporate minority advertising
Ad agency: The Mingo Group, New York
Since: 1987

HONDA
Ad agency: Rubin Postaer & Associates, Santa Monica, Calif.
Since: 1974
Ad theme: None.

HYUNDAI
Ad agency: Backer Spielvogel Bates, Irvine, Calif.
Since: 1985
Ad theme: ``Hyundai. Yes, Hyundai.''
Since: 1990

INFINITI
Ad agency: Hill, Holliday, Connors, Cosmopulos, Marina Del Rey, Calif.
Since: 1988
Ad theme: "Infiniti. Makes you feel like driving again, doesn't it?"
Since: 1991

ISUZU
Ad agency: Goodby, Berlin & Silverstein, San Francisco
Since: 1991
Ad theme: Practically/Amazing
Media buying service: SFM Media Corp., New York
Since: 1991

JAGUAR
Ad agency: Geer, DuBois, New York (in review)
Since: 1986
Ad theme: ``The best Jaguars ever built."
Since: 1991

LEXUS
Ad agency: Team One, El Segundo, Calif., unit of Saatchi & Saatchi DFS/Pacific
Since: 1987
Ad theme: ``The relentless pursuit of perfection.''
Since: 1989

existence
May
the best
machine
win.

SUBARU: Subaru, resurrecting the irreverence, self-deprecation, non-ostentation appeal and typeface of Doyle Dane Bernbach's Volkswagen ads of the early '60s, goes against auto-ad convention by deglamorizing its cars. The psychographic target: the conspicuously inconspicuous consumer. Wieden & Kennedy, Cherry Hill, N.J.

By Bob Garfield
"Ad Review" columnist

Chrysler Corp. gets a lot of attention for its various corporate campaigns ("Hi, I'm Lee Iacocca. Buy a Chrysler product or one of these distinguished top executives dies at dawn").

But what viewers are most apt to have seen lately has nothing to do with impassioned chief-executive pleading, nor with airbag safety, nor with the long-awaited coming of the Viper.

What viewers see the most is three babes in tight, red sequins, kicking and grinding for Dodge.

Oy.

It's a promotion campaign from BBDO Worldwide, Southfield, designed to generate traffic in empty Dodge showrooms. And it must be working like crazy. Chrysler only lost $795 million in 1991.

This isn't entirely coincidental. While American cars have substantially closed the quality gap with the Japanese competition, American-car advertising still clings to the old themes (sex appeal, prestige, excitement), the old imagery (mountain roads at dusk), the old bombast ("THE BEST BUILT, BEST BACKED american CAR!"), the old superficiality ("The Heartbeat of America").

Is it any wonder, then, that consumers cling to their prejudices about American cars?

The Japanese, on the other hand, have mainly aligned themselves with the New Advertising as created by such upstart agencies as Chiat/Day/-Mojo (Nissan); Rubin Postaer & Associates (Honda); Wieden & Kennedy (Subaru); Goodby, Berlin & Silverstein (Isuzu); and Hill, Holliday, Connors, Cosmopulos (Infiniti).

Japan, on the other hand, is gaining share. This is no coincidence, either.

When Chiat/Day/Mojo took on the Nissan business in 1987, many asked if this really boded any fundamental change vs. an experiment in self-indulgent creative that would soon give way to the tried-and-true.

At first there was no clear answer. Chiat/Day/Mojo's premiere effort was the insufferable Yuppies in a Hangar campaign, featuring eight demographically balanced refugees from "thirtysomething," lounging around in very dramatic lighting and congratulating one another for their surpassing vision in creating the Nissan Pathfinder.

Mercifully, this turned out to be an anomaly. Since then, in various bold and subtle ways, Chiat and its fellow travelers have challenged every assumption, every canon, every cliche Detroit ever had about advertising cars.

In their place: wit, self-deprecation, simplicity of image, humility, directness, accessibility and an unorthodox approach to consumer psychology.

Chiat pitched Nissans to Joe Sixpack by stimulating not sex fantasies but empowerment fantasies.

Wieden & Kennedy ridiculed the notion of buying a car to impress the neighbors and (echoing the Volkswagen ads from the once upstart Doyle Dane Bernbach) promoted a sort of conspicuously inconspicuous consumption. Hill Holliday had the temerity, widely viewed as sacrilege, to produce car commercials minus any cars whatsoever.

And for Saturn, Hal Riney & Partners said, "Aw shucks. We Saturn folks aren't anythin' special. We're just a buncha folks who really care about makin' a pretty fair country car, and we hope you think it's a pretty fair car, too."

All right, granted, Saturn isn't a Japanese car. But it's General Motors' version of a Japanese car, mimicking the Asians in styling, performance, management techniques and integrated design.

Chiat pitched Nissans by stimulating empowerment fantasies.

It's therefore also no coincidence that Saturn, along the way of being "A Different Kind of Car, A Different Kind of Company," had to find itself a different kind of agency—i.e., not McCann-Erickson, D'Arcy Masius Benton & Bowles, N W Ayer or Lintas:Campbell-Ewald.

Not all of these approaches are necessarily unassailable. Infinti's "rocks and trees" spots were as annoying as they were intriguing, and Riney's early Saturn ads were *too* laid back, ostentatiously—and therefore falsely—humble.

Moreover, Toyota hired Saatchi & Saatchi, formerly Dancer-Fitzgerald-Sample, a large, establishment shop producing monumentally bland advertising, and Toyota is the gorilla of imports.

If the domestic car industry is to prosper—as it will, when its astonishingly good new products come on line and the American consumer's predisposition to associate "quality" with "Japanese" begins to wane—the advertising lessons are clear: Babes and jingles may please the senses, but what they communicate is a legacy that is best forgotten. ☐

SATURN: What if someone could build a Japanese car with American values? This is what Saturn is all about and Hal Riney & Partners has pretty well communicated it, too, with a series of ultra-self-effacing spots about some country folks who hug their kids and go to church and make the best darn family cars they can, no matter how hard they work to get the job done. The humility is sometimes excessive, but the message comes through.

ISUZU TROOPER: Despite their generally out-of-sync quality, new spots from Goodby, Berlin & Silverstein for the Isuzu Trooper cleverly invoke wry universal truths—such as men's macho inability to ask for directions—to highlight the advantages of four-wheel drive.

Easy to covet, hard to connect

By Joe Mandese

With the possible exception of the recession, no story dominates the conversations of automotive media planners and buyers more than cross-media deals.

Cross-media packages appear to combine many of the hottest marketing buzzwords: integrated marketing, value-added, synergy.

But beneath the hyperbole, only a handful of such deals have actually been structured, including three separate Time Warner megadeals with General Motors Corp., Chrysler Corp. and Mazda Motor of America.

Even the people involved in the most intimate details of those deals say the jury is out on their value.

Cross-media packages tend to be open-ended and multiyear arrangements that require constant stewardship and fine-tuning. Thus, many executives involved in them say it is difficult to specify exactly what they've gotten at any point in time.

"These are moving, breathing things," says James Helberg, VP-group media director at Foote, Cone & Belding, Santa Ana, Calif., who helped develop and continues to rewrite Mazda's cross-media package with Time Warner.

While he maintains Mazda is getting good value out of the buy, he says many cross-media deals are more statement than substance.

"There's a lot of pressure on agencies and clients to create the next big idea. And cross-media is the next big idea," he says.

"A lot of them have been done for grandstanding reasons. I think a lot of them that were announced have not come to fruition," admits Phil Guarascio, GM's executive-in-charge of corporate marketing and advertising.

"Most of the advertisers are making agreements in concept and working a lot of the specifics out as they walk through together," adds Randy Schroeder, exec VP-management director/media for Campbell-Mithun-Esty, Southfield, Mich., which handles Chrysler's Jeep/-Eagle division. "Time Warner and others have a massive array of potential outlets. We've got to get smarter on how to use them."

In GM's Time Warner deal, Mr. Guarascio says the auto marketer has the capability of using "35 or 40 different kinds of applications of non-mainline media" that Time Warner has to offer.

To date, he says, GM has implemented about a dozen.

He declined to be specific about which programs GM has used. But Mr. Guarascio notes GM has used video production, graphic arts and fulfillment capabilities, and it has married that to in-magazine targeting capabilities of the company.

"It takes a tremendous amount of energy to make these things work. We're really looking for ways to combine a variety of elements to create a whole that's greater than the sum of its parts," Mr. Guarascio says.

Most auto media executives believe use of cross-media will grow, but not necessarily on the magnitude of the multimillion-dollar megadeals.

"I think you'll continue to see multiple-media deals, but they will end up being much more specifically customized in the future," says Mr. Schroeder. "Five years from now, you're going to have very small specific proposals that are multi-media and highly targeted toward the client, but not necessarily the same singular great buy." ☐

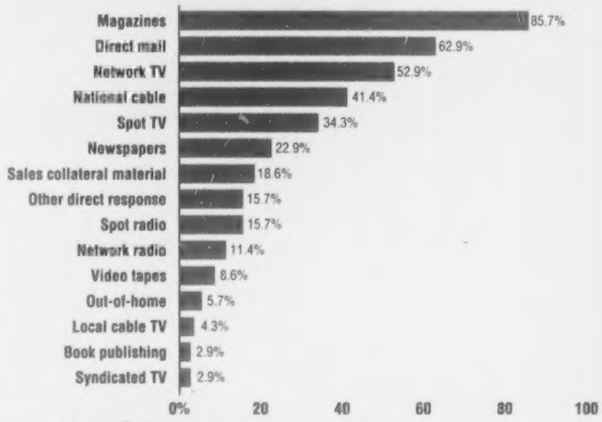
Cross-media package

Percentage of respondents who would include each medium as one of four choices in a cross-media package.



Source: J.D. Power and Associates

Magazines linchpin of cross-media

Most auto marketers say they aren't looking for cross-media deals to be all-inclusive.

The J.D. Power & Associates survey found 85.7% of respondents cited magazines as one of four media elements they would include in an ideal cross-media package, while 62.9% cited direct mail, 52.9% network TV and 41.4% cable TV.

Spot TV, newspapers and sales collateral materials were less popular choices with 34.3%, 22.9% and 18.6% of respondents citing those options, respectively. Interestingly, the value of the respective media in cross-media deals varies between agency and advertiser executives.

Asked to design the "ideal" cross-media package, network and spot TV were components cited by 97.3% of automotive ad agency executives, but only 75.8% of auto marketing executives.

In contrast, 87.8% of automaker personnel were more inclined than agency respondents (70.3%) to include direct mail/-direct response media.

Overall, 31.4% cited the lower costs-per-thousand that cross-media deals can generate as the primary advantage of such deals, and 27.1% cited the ability to deliver a single message in a variety of media.

Such findings suggest the cross-media deals have been primarily designed as large-volume discount programs combined with value-added options.

As a result, some agency media executives believe the deals have been used more for tactical reasons than strategic ones.

"From my perspective I would want to look at a cross-media promotion as a relevant marketing idea that would have extensions of the communications value first," says Bob Mancini, senior VP-media director of J. Walter Thompson USA, Detroit, agency for Ford Motor Co.'s Ford Division.

To some agency media executives, price efficiency is the operative term, and important as one component of overall strategy.

No panacea

Price is "important insofar as you don't want to put yourself in the position of spending more per impression than you would otherwise," says Joel Kushins, senior VP-media director at Bozell, New York, agency for Chrysler Corp. "But unless there is something compelling about what the whole package deal is about, it's probably not worth doing."

Mr. Kushins says today's cross-media deals will lead to better ones in the future.

"Cross-media is not the ultimate panacea," he says, "but it's gotten people on the agency, client and media side doing things and thinking about things that they would not have even considered doing before." ☐

The General preps for the counterattack

Inserting the team approach tops changes needed to rebound from '80s

By Raymond Serafin

There's not much wrong with General Motors Corp. that an infusion of good marketing can't fix, to hear some marketers tell it.

But this marketing sensibility needs to find its way into the marrow of the entire company, not just be restricted to the ghettos of designated marketing units.

What's needed is something Vincent Barabba calls " 'Big M' Marketing," to distinguish it, he says, from the narrower activities taken on by "the people who have marketing in their titles."

> **"If I can recognize a car at 1,000 feet, that's an identity."**

Mr. Barabba is executive-in-charge of GM's market research decision center and—some observers say—a missionary of sorts, preaching that corporate salvation can be found in being a marketing-driven company.

Create a customer

Mr. Barabba hearkens back to management authority Peter Drucker's admonition that the purpose of any business is to create a customer. In Mr. Barabba's broad view, marketing encompasses multidepartmental planning and executing of product development, pricing, promotion and distribution to attract customers and sustain a relationship with them.

"Change is difficult, particularly when you've been a dominant player in your industry," says Mr. Barabba. "It's unfortunate, but sometimes it takes a level of pain to say you're going to have to change the way you do business."

The question of how to produce a GM comeback would never have arisen if the giant company had been taking better care of its customer base over the last decade. GM lost customers in droves during the 1980s, and that has colored the way the world views the entire U.S. domestic automobile industry.

Share drops 11

From 1980 to 1990, the domestics' share of U.S. car market registrations dropped 6 share points, to 65.7%. GM lost 11 share points in that time, to 35.4% from 46.4%.

That drop of 11 share points coincided with the tenure of Roger Smith as chairman of GM. Robert Stempel succeeded Mr. Smith on Aug. 1, 1990, the day before Iraq invaded Kuwait, setting into motion events that aggravated the economic downturn.

"I put Stempel and Boris Yeltsin in the same category," says Jim Wangers, senior managing partner of Automotive Marketing Consultants. Both men are trying to hold together the remnants of an empire nearly ruined by their predecessors.

"GM might never recover from Roger Smith, but Stempel is catching most of the hell," Mr. Wangers says.

Mr. Stempel presides over a company that lost $4.5 billion in 1991, the biggest loss posted by any company ever. GM is now planning to close 21 plants over the next three years as part of an effort to control costs.

Shortcomings showed

"Marketing," says Mr. Wangers, "has been one of the serious shortcomings of the corporation over the last decade or so."

Led by Mr. Stempel and President Lloyd Reuss, GM is reorganizing, creating a North American Operations group to eliminate layers of management and develop improved accountability for decisions.

Mr. Barabba describes the goal for the new organization as "a seamless structure . . . running the business from the market's point of view."

Traditionally within GM, separate units plan aspects such as product, pricing, distribution and promotion, leading to the creation of mini-empires. "They bring all these optimized business plans together and then begin compromising, and you get giant fights taking place" as departments battle over turf, Mr. Barabba says.

In place of that system, GM envisions an organization in which multidisciplined groups work as teams to find strategies keyed to sustaining customer satisfaction and delegate the resources needed to accomplish the goal.

A key point is the focus on customer relationships rather than selling a vehicle.

"I might make decisions that re-

HONDA

This right-hand-drive Honda ad promotes its U.S. factory role.

On edge in the middle of America

'People in the Rust Belt tend to become emotional when you talk about imports'

By Patricia Strnad

When Toyota Motor Corp. started building cars in Georgetown, Ky., dealers of domestic autos in the area complained bitterly.

The plant's presence was killing their sales, says Jay Houghton, principal in charge of research and consulting at Automotive Information Group. At the time, Mr. Houghton was senior VP at Lintas: Campbell-Ewald, Warren, Mich., in charge of advertising in the central region for General Motors Corp.'s Chevrolet Division.

■ A look at other U.S. regions on Pages S-26, S-50 and S-51.

The potential to capture sales from domestic brands is one of the main reasons Japanese automakers built plants in the Midwest.

"One of the reasons Honda chose to build cars in Marysville, Ohio . . . wasn't that Marysville has natural resources or great distribution advantages," Mr. Houghton says. "The reasoning was, if people in that area worked on those products, they would buy those products."

Tough to crack

Now most Japanese automakers operate plants in the Midwest, which has been the toughest sales region for them to crack. In addition to the Kentucky and Ohio plants of Toyota and Honda Motor Co., respectively, Nissan Motor Co. builds vehicles in Smyrna, Tenn.; Mazda Motor Corp. has a plant in Flat Rock, Mich.; Mitsubishi Motors Corp. operates a plant in Normal, Ill.; and Fuji Heavy Industries (maker of Subaru) and Isuzu Motors have a manufacturing joint venture in Lafayette, Ind.

Although those plants have improved consumer acceptance of Japanese vehicles, most Japanese importers are finding it necessary to adopt other strategies to boost sales in America's heartland.

Among the tactics: Strengthening distribution via added dealerships, increasing area media weight and creating ads aimed directly at Midwesterners, who tend to be more loyal to General Motors, Ford Motor Co. and Chrysler Corp.

In recent months Japanese automakers have increased advertising in the Midwest to fight anti-Japanese sentiment triggered by recession, GM plant closings and layoffs, and widespread media attention on the trade imbalance. And many have turned to advertising that emphasizes the U.S. origins of many of their products.

Share lags

It's too early to tell whether the increased marketing activity is helping. But even before hostility toward Japanese products began to escalate, the Japanese cars' Midwest market share lagged significantly behind national share.

According to R.L. Polk & Co., which tracks U.S. vehicle registrations, domestic brands took a 64.1% share of total U.S. new car registrations in 1991, compared with 31.5% for Japanese brands. But in the Midwest, domestic nameplates took 75.7% to the Japanese 21.7% share.

"Market acceptance of Japanese brands depends on whether there's a strong support for the union in that town," says Rick Lepley, senior VP-sales and marketing for

(Continued on Page S-38)

Calif. dream turns urgent

By Cleveland Horton

California or bust.

That's the rallying cry from Detroit as domestic car marketers gear up to retake market share in the heart of import country.

Although specialized automobile marketing programs for the California market have come and gone, the nature of the most recent efforts resembles a clutch play.

Domestic automakers are joining the battle as if their survival depends on it. And it might.

Big percentage

Apart from its acknowledged role as bellwether for the nation, California traditionally accounts for 11% of all U.S. sales of cars and light trucks.

For 1991, however, California sales for the Big 3 fell far below that, compared with total U.S. sales. General Motors Corp.'s sales in the state represented 9.3% of its total U.S. volume. Chrysler did 9.2% of its U.S. volume in the Golden State while Ford's percentage came in at 8.5%.

By contrast, the Asian imports counted on California for 17.3% of their U.S. sales; European imports saw 21.0% of their sales in the state.

Evidence of the new commitment by the domestics to California is rife. GM took the unprecedented step by bringing all its divisions together late last year to discuss corporate action in retaking the California market.

Sources say Ford Motor Co. is holding top-level meetings addressing not only product concerns regarding its California share but ways of making it "O.K." for West Coast people to park a Ford in their driveway.

"California has always been a problem—or an opportunity—for the domestics," says Vic Olesen, president of Vic Olesen & Partners, Los Angeles, which handled West Coast advertising for Chevrolet until early this year.

Opportunity cars

"The hard part is getting the company to swallow the fact that they cannot sell Caprices here but they can Camaros," Mr. Olesen says. "They have to identify volume, opportunity cars."

Chevy's national agency, Lintas:Campbell-Ewald, Warren, Mich, recently expanded its Los Angeles office to oversee the division's western regional work. But Richard O'Connor, chairman-ceo, agrees with Mr. Olesen's assessment.

"California has traditionally been a great Camaro market, but there hasn't been a redesign of that car in 11 years," he says.

And then there's Saturn. GM's $3 billion experiment represents the company's last, best hope in fighting the imports, and the new division zeroed in early on the importance of California.

To win back import owners, Saturn hired a San Francisco agency, Hal Riney & Partners, which created a teaser campaign introducing the company, rather than the car, in October 1990. GM's new star first became available in California.

Chrysler Corp. also did "the most comprehensive research the company has ever done," says John Damoose, VP-marketing, when the company "went to California and talked to thousands of import buyers."

One of the things they learned, Mr. Damoose says, was that just changing the vehicles alone wasn't enough; the company needed to change its way of dealing with customers. So Chrysler now is launching what Mr. Damoose believes to be the most ambitious dealer training program ever. ☐

Home field advantage?

Japanese car marketers' success in taking almost half of the California market didn't happen by accident.

First, most located their U.S. marketing arms in California: Toyota Motor Sales USA, American Honda Motor Co., Nissan Motor Corp. USA, American Isuzu Motors, Mitsubishi Motor Sales of America, American Suzuki Motor Corp. and Mazda Motor of America.

Then, they designed cars specifically for the state, adding standard features such as FM radios (the California FM market was more developed in the 1970s than the rest of the country).

"People got some satisfaction out of those Japanese products," says Jim Wangers, senior marketing partner at Automotive Marketing Consultants. "And then the Japanese improved the areas where they were originally weak, like styling."

It worked. "Part of being a Californian is to drive a Japanese car," he says. ☐

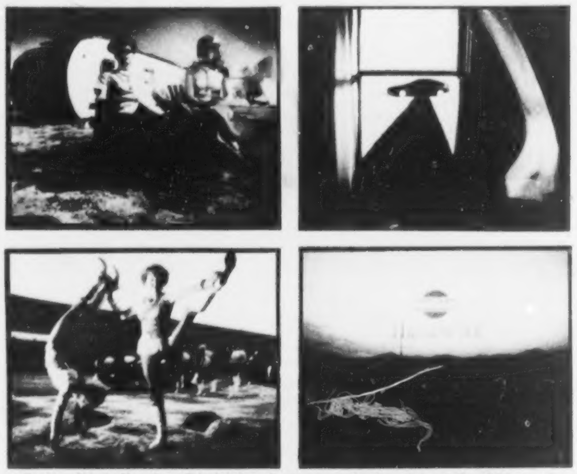
Who did that ad?

The young copywriters behind the agency wheels of some hot cars.



"Dullsville's" mix of laid-back scenes helped put the NX on the map for Nissan and agency Chiat/Day/Mojo.

Putting cool into 'Dullsville'

People ask Rob Siltanen if he can help them buy a new Nissan NX cheap.

"I can't get them cheap. I can't even get one for myself," says the 28-year-old copywriter who worked on the "Dullsville" spot at Chiat/Day/Mojo, Venice, Calif.

Even after finding out there's no special discount available for acquaintances of the copywriter, "everybody always says those are really cool commercials," Mr. Siltanen says. The strategy was to position the NX as a fun car. "It's the kind of car my friends would want to drive. I think we succeeded in saying it's a fun car. We didn't have to get into all those other things, like how well it handles."

For Rob Siltanen, "a car has always been an emotional thing, more than a rational thing."

Mr. Siltanen worked on the Acura account at Ketchum Advertising, Los Angeles, before joining Chiat/-Day/Mojo a year and a half ago. And he didn't move onto the Nissan account right away.

"I was working on everything non-Nissan and this project came up and my partner and I jumped in," he says.

At the time, there wasn't much competition. "When I first got there, a lot of people wanted to be on the other [non-Nissan] side," he says. Now everybody wants to work on the Nissan account, because the work's so good. They give us a lot of opportunities to do the kind of work we want to do."

Mr. Siltanen says he never thought of himself as a car buff.

"For me, a car has always been an emotional thing, more than a rational thing. Now I'm starting to see some of the rational reasons that are real. You just have to drive the cars to see," he says. "I'm learning the language—'viscous limited slip differential' and all that stuff."

He recently visited Nissan's plant in Smyrna, Tenn., to help round out his auto education. "I'm just now starting to appreciate them a little bit more, especially working with so many 'car guys.' I won't call myself that yet. I'm learning." ☐

—Jon Lafayette

Compensation misses mark

Several consumer products companies in the U.S. have started using an incentive pay structure for ad agencies—in effect, paying more if the advertising "works."

Such large package-goods marketers as Campbell Soup Co., RJR Nabisco and Kraft General Foods have adopted a form of incentive-based compensation in the past few years.

But automakers aren't fazed by the compensation trend. The J.D. Power & Associates survey for *Advertising Age* and *Automotive News* found that fewer than one-fifth of the respondents (18.6%) use any performance criteria as a portion of agency compensation.

Sixty percent report they don't foresee basing agency pay on performance in the near future. ☐

Looking over shoulders

(Continued from Page S-16)

thinks a new wave of activity could sweep him in.

"Detroit is taking another look at itself in every way. They can't afford to have the Japanese beat them in advertising," he says. "They're working very hard to catch up and overrun the Japanese in car design and car quality, and all of that is going to be meaningless if they can't market their cars as good as the Japanese have."

Adds Don Weir, exec VP-account services at Jordan, McGrath, Case & Taylor, New York, "there's no question that good advertising could help those guys."

Jordan McGrath has been trying to get a car account for years. Mr. Weir thinks Detroit could certainly use some new blood.

Consumers are numbed

"It would make a hell of a lot of sense. They've been doing the same old stuff for so long that there's just a staggering, numbing effect on consumers," he says.

"They spend billions a year on advertising automobiles. Out of that about half is spent in deals, sale-athons, price-off promotion, rebates, zero financing. It's just unbelieveably numbing."

The problem runs deeper than creative execution, Mr. Weir says.

"It's their positioning work, their strategies. There was a day when Pontiac had 'We Build Excitement' and their cars echoed that all the way down to the accelerator floor. The advertising grew out of that. Now consumers are having a real hard time telling the difference between Pontiacs and Oldsmobiles, Buicks and Chevrolets. There's no delineation. That's a strategic problem as much as a creative problem."

But Mr. Weir thinks getting a domestic auto account is a long shot for his agency. "That's such a hard club and clique to break into," he says.

"The relationships are just so layered into each other—they go back 50 years," adds Donnie Deutsch, exec VP-creative director at Deutsch, New York. "But we all know they should be looking. Just look at the Saturn advertising that [Hal Riney & Partners] did. You can poke holes and say that's just more Riney, but it has a voice. It's advertising. Most of the other car advertising is pap," he says.

If automakers decide to go shopping for a new agency, they'll find it tough to find many substantial shops that don't already have a car account.

"There aren't that many stores in town," says Mr. Della Femina. "The same people will be called for the next major Detroit thing. It will be us, it'll be Jordan Case, it'll be maybe Bill Tragos [chairman of TBWA].

"There are agencies without car accounts that are sitting in nice seats right now and can probably pick up a good one if Detroit starts to move. And let's face it. If one of the Big 3 in Detroit makes a move, the other two are not going to sit back and let them." ☐

All signals look green

Environment concerns move to front, auto execs agree

By Arlena Sawyers

Green marketing could turn golden in the auto industry.

Decades of growing environmental awareness and deteriorating air quality have led to stringent clean-air laws that force automobile companies to research, develop and test-market environmentally friendlier vehicles.

And that looks to be playing right into growing grassroots consumer interest in the issue.

Importance grows

The J.D. Power & Associates survey for *Automotive News* and *Advertising Age* shows green marketing will continue to gain importance with auto executives in the next five years.

Of the automaker and agency executives surveyed, 20% said green marketing will become much more important and 70% said it will grow somewhat more important over that time period.

"We spend a lot of time with customers and do a lot of research—awareness of environmental issues is growing," says Richard Fenstermacher, Ford Motor Co. executive director-marketing for North American Automotive Operations.

> "While [alternative] fuels have positive attributes, there are some trade-offs."

Most of the green technology—which will include recyclable parts and less toxic materials as well as cleaner exhausts—is still in the concept-vehicle stage. That means most green marketing is limited to news stories, displays at auto shows and carefully monitored pilot programs.

The state of California is the driving force in auto industry greenness, with the toughest clean-air standards in the country.

In September 1990, the California Air Resources Board adopted a law that, beginning in 1998, requires 2% of each automaker's sales have zero emissions. With existing technology, that means battery power. The portion rises to 10% in 2003.

As many as nine states and the District of Columbia have signed agreements supporting similar rules in their jurisdictions. Together, those states represent one-third of U.S. car and light-truck registrations.

Nearly every manufacturer has developed or is developing an electric vehicle (*see story below*) but they're not considered practical yet.

Build a better battery

At this stage of development, the vehicles have short driving ranges and batteries wear out quickly from constantly being recharged.

However, Ford, General Motors Corp. and Chrysler Corp. have a major joint venture under way with a goal of better batteries than those currently available, and all the companies proceed as if they will solve the problems.

Vehicles using alternative fuels like methanol and compressed natural gas are

Battery power's impact takes hold at GM

First mass-produced electric car cuts across all market segments

By Phil Frame

For General Motors Corp., the successful marketing of a battery-powered vehicle hinges on selling it as a great car that happens to be electric.

In 1998, GM and all other large automakers will be required by California and other states to sell electric or other zero-emission vehicles, whether or not there's a market for such transportation.

GM, the first major automaker to plan to mass produce an electric car, is aiming for a wide audience, says John Albers, director of market research for GM Electric Vehicles, a branch of the advanced engineering staff that developed the company's Impact concept car.

"This is a real car for real customers, and in addition it has an electric propulsion system that gives it more desirability," Mr. Albers says.

"We're trying not to take a look at this car as an unusual product. We ought to think of it as a mainstream product because that's what we want the customer to think."

All "market segments are targets for electric vehicle propulsion. It's not fitting neatly into one segment of the marketplace, which is good for us because that means it has wide appeal," he says.

The sales pitch to customers probably will center on the electric vehicle's environmental benefit, a virtual absence of maintenance and greater convenience because people can "refuel" at home rather than go to a gas station.

The advertising itself is the responsibility of Amy Rader, the 24-year-old director of advertising for GM Electric Vehicles.

Ms. Rader, who worked at Saturn Corp. for 1½ years before taking the job, says the company will focus on educating customers before any media advertising.

"The way I see this working, the education is going to start out teaching people what electric vehicles are, teaching people what questions to ask so they can start comparing," Ms. Rader says. "We have to give consumers a start on how to compare" alternative fuels.

The second step, she says, is to teach people how to realistically look at their driving patterns to see if an electric car is right for them.

"When they stop, how long do they stop? Is it long enough to recharge?" Ms. Rader says. "Getting people to start thinking about their own needs is going to be an important part of our job."

As the vehicle gets closer to production, Ms. Rader's task will be to convince people to buy GM's product.

The other major U.S. automakers are also exploring electric cars, though not at the same level as GM.

Earlier this month, Chrysler Corp. signed an agreement with Westinghouse Electric Corp. to jointly develop an alternating-current motor for a 1995 or 1996 electric minivan.

GM's Impact prototype electric vehicle takes the sloping Saturn nose one step further.

Ford Motor Co. hasn't announced production plans, but it plans to deliver a test fleet of 80 electric minivans based on its European Escort to utility companies in spring '93.

Still, GM's Ms. Rader says: "We have a big competitive advantage because GM's big vertical integration structure is finally paying off. We're the only people who can build our own batteries, converters and sell and service a car."

That advantage might not last too long. Longer-term, the Big 3 have agreed to a joint venture to build by 1994 better batteries than GM can currently produce.

GM's Mr. Albers says he expects the state governments that mandate electric cars to encourage buyers of alternative-fuel vehicles by offering some form of subsidy.

These governments—a number of states have followed California's lead with such rules—adopted the measures to reduce auto emissions and, to have a significant effect, the low-or-zero-emission vehicles have to be on the road in some quantity.

Although GM has begun planning, Mr. Albers knows there may not be great demand for electric vehicles at the moment.

"Right now, I would describe it as market potential," he says. "We need to go out there and raise the level of knowledge and get infrastructure in place. We'll make sure the market is developed when we're ready."

And, he says, GM and the other carmakers can't assure success on their own.

Mr. Albers says utilities and government agencies have to be heavily involved. It will be their eventual job to make sure facilities are available so people can conveniently recharge the electric cars that will follow the coming GM home-rechargable model. ☐

General counterattacks

(Continued from Page S-24)

duce the amount of value I get from the first [sales] transaction based on the fact I want [the customer] to come back," says Mr. Barabba. That might translate into more dealership training or better warranties or other programs.

A more market-based organization could help GM re-establish strong brand images across the board. Mr. Wangers and others say GM's once-powerful brand identities were diluted as a result of Mr. Smith's mid-1980s reorganization, which created three platform groups with responsibility for developing products. The reorganization separated manufacturing and design responsibility from marketing responsibility.

"The secret to rebuilding the brands is to make products that match up with what the brands stand for," says Sean Fitzpatrick, vice chairman of McCann-Erickson North America, which handles Buick, GMC Truck and GM's corporate quality campaign. "If I can recognize a car at 1,000 feet, that's an identity."

Some of GM's brands appear to be on the right track, delivering consistent messages and successful products to match.

Import fighters

Cadillac's 1992 Eldorado and Seville showed the brand could compete with the best of the imports. Buick has boosted its market share in recent years by presenting premium products such as the Park Avenue and LeSabre. Geo has attracted young import prospects.

GMC Truck has been holding its own on the truck front, and the new import-fighting Saturn brand shows promise, based on the high grades it's getting for taking care of customer concerns.

Observers credit Pontiac with developing a performance image, but criticize GM for not providing enough fitting product.

Oldsmobile and, to some extent, Chevrolet remain sore spots.

Olds built big volumes in the mid-1980s with products that appealed to a decidedly mature audience. But with Buick now ensconced successfully in the traditional upscale domestic-car niche, Oldsmobile has floundered in trying to return to a historic identity as a company on the forefront of engineering excellence.

Barabba

"It's unfortunate, but sometimes it takes a level of pain to say you're going to have to change the way you do business."

Chevrolet has been resurgent on the truck side, but it lacks the car that could—given Chevy's vast distribution system—turn into a knockout volume leader.

"Chevrolet should provide GM's entry-level, low-price statement of basic reliable, dependable transportation," says Mr. Wangers. From that standpoint, "GM isn't building a Chevrolet," he says.

Attacking the perception

Beyond putting brand identities in order, GM still faces the problem of convincing once-burned customers this is no longer the haughty organization that put out poor products.

"The difference between GM quality and the highest-quality manufacturers in the world is less than one defect per car," says Philip Guarascio, GM's executive-in-charge of corporate marketing and advertising. "The quality gap has really closed, and we have to make sure people understand that."

It's doubtful any other company matches GM in sheer quantity of research into the market and into marketing communications.

Leading edge

Mr. Guarascio's department has a formalized research and development component devoted to exploring new ways of advertising, merchandising and event marketing.

"Its purpose is to identify long-term leading edge kinds of opportunities that are going to create advantages for our divisions," Mr. Guarascio says.

GM in the past several years has been a leader in developing both innovative deals with traditional media organizations and also in exploring new media and promotional opportunities.

Jury's out

The jury is out on whether all of GM's efforts will produce a turnaround, or whether the company will squander its resources. Mr. Barabba says success for GM is a matter of returning to the philosophy that drove Alfred Sloan, the former president and chairman who managed the company to the top of the industry, beginning in the 1920s.

"Sloan had one of the great marketing minds," Mr. Barabba says. "He structured a business that had the customer at the end. 'A car for every purse and purpose' [Sloan's maxim]—that's creating a business with the customer at the end.

"We're at the rebirth of how the company is going to do what it did so well before, except now it's going to have to do it in the context of an environment that's a helluva lot harder than what Mr. Sloan started out with." ☐

Midwest

(Continued from Page S-24)

Mitsubishi. "That's a prevalent factor in forging attitudes. Detroit would certainly be a strong union town, but the union influence isn't quite so strong in a city like Chicago."

Strong job link

It also has to do with the fact that many Midwesterners' jobs are tied to the domestic auto industry.

"People in the Rust Belt tend to become emotional when you start talking about imports and other issues affecting their livelihoods," Mr. Houghton says. "They start thinking in terms of black or white. They see the purchase of an import as 'against us.' "

But attitudes and ties to the domestic auto industry aren't the only reasons the Japanese haven't made greater gains in the heartland. Distribution is key, too.

When they first entered the U.S market, Japanese automakers shipped vehicles to ports on the West and East Coasts. With import quotas and a limited supply of vehicles, they naturally began penetrating markets closest to the points of delivery.

"It's taken time to develop strong inland distribution," says Jan Thompson, VP-marketing at Mazda.

Adds Bob Weldon, general manager of the Cincinnati region for Toyota Motor Distributors, "It's sheer numbers. In Cincinnati, there are five Toyota dealers compared to about 16 for Ford and 17 or 18 for Chevrolet. That really affects our ability to penetrate the market."

In 1991, there were nearly 7,000 Japanese auto dealerships in the U.S., up 29% from 1987. That's not likely to grow. Mr. Weldon and officials from other Japanese importers say dealer expansion plans are being curbed until the economy improves and existing dealers can strengthen their businesses.

Meanwhile, as the Big 3 urge consumers to "Buy American," Japanese automakers are letting consumers know many of their vehicles are U.S.-made.

Subaru, for example, is putting "Made in America" stickers in the rear windows of the Subaru Legacy, which is built in Indiana and accounts for 70% of Subaru's U.S. sales. The marketer also recently broke a Legacy TV spot shot in the U.S. plant.

Toyota has been running a print campaign this year focusing on the people who work at its Georgetown, Ky., plant and a TV spot talking about the U.S. origin of the Camry sedan. While those ads, from agency Saatchi & Saatchi DFS/Pacific, are running nationwide, "they are played more in the Midwest than on either coast," Mr. Weldon says.

Honda is running two "Made in America" spots, one for the East and another for the West. A print ad, headlined "What's right with this picture?" shows a right-hand-drive Honda and talks about how Honda exports cars made in the U.S. to Japan. Rubin Postaer & Associates is the agency for Honda.

Flat Rock ad

Mazda broke an ad last month recognizing workers at its Flat Rock, Mich., plant and suppliers for their help in rolling out the redesigned 1993 MX-6 coupe. Copy in that Foote, Cone & Belding ad says the MX-6 is "the first import-branded car that may be truly considered a domestic product." The ad ran in newspapers in the Detroit area and Toledo, Ohio. ☐

Tradition out the window

(Continued from Page S-3)

troit, last year revised the way they evaluate magazine buys, a process that resulted in Ford reducing its magazine schedule from the previous 130 titles to about 90 for the 1992 model year.

"We buy magazines far more effectively than we used to," says John Vanderzee, Ford's director of advertising. "Today we're using target audience CPM as only one of the factors, albeit an important one.

"We're very interested, for instance, in reader involvement with a magazine. We measure things like how many readers read three out of the last four issues," Mr. Vanderzee says.

Mr. Vanderzee says targeting is easier with magazines than with TV. Ford, he says, had no trouble determining a magazine schedule for its upcoming launch of its redesigned Probe this July.

"But it's not as easy to find youth-oriented television, and also get reach," Mr. Vanderzee says. "MTV reaches youth, but I could buy every commercial on it for a month and not reach one-tenth of the people I want to talk to."

Still role for TV

While the movement toward customizing the message to the audience leaves the TV networks somewhat vulnerable, few auto marketers expect to abandon the medium.

"I don't see it as an either/-or situation," says Lois Miller, senior VP-director of media marketing services at Hill, Holliday, Connors, Cosmopulos, Marina Del Rey, Calif., agency for Nissan Motor Corp. USA's Infiniti. "Mass media perform a certain task, and they do it well, as long as you don't ask mass media to get down to the nitty-gritty selling."

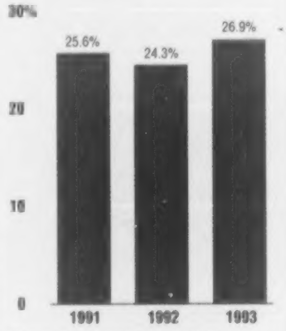
"You have to cover more bases now," says Duncan Pollock, exec VP in charge of BMW of North America at Ammirati & Puris, New York. One reason, he says, is that TV is glutted with auto advertising.

$10 million a night

"We did a study a year and a half ago and found that on an average night in New York City, there is $10 million spent on auto advertising on TV," Mr. Pollock says.

Marketing allocation

How much of respondents' model-year marketing budget will be devoted to consumer promotions rather than advertising?



Source: J.D. Power and Associates

Mr. Vanderzee says clutter is an increasing problem, especially with TV.

"The networks have done a lousy job of controlling it because they need more inventory," Mr. Vanderzee says. "I frankly think they're shooting themselves in the foot, because a lot of people are really tired of it."

That clutter is one factor driving the growth of direct marketing and place-based media, says Mr. Julow, because those options allow a marketer to better control the selling environment.

Chrysler is one of a number of auto marketers that have tried to build a multifaceted marketing program around a particular theme. For instance, the company's involvement with the recent Winter Olympics included broadcast sponsorship on CBS and cross-promotions that involved Kmart Corp., CBS and Time Warner's *Sports Illustrated*.

Mr. O'Connor says Lintas:Campbell-Ewald believes integrated marketing is the wave of the future.

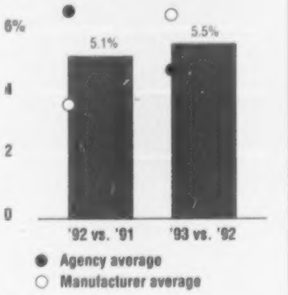
Three years ago, the agency put together its model for integration in launching the Chevrolet Lumina with multi-media advertising, co-promotion with Walt Disney Co., dealer introduction program and training materials.

Integration builds

Integration is particularly important for durable goods, where dealers and salesmen play a key role in the sale, says Mr. O'Connor.

Change in advertising and marketing budget

Average change in budget from previous model year, as foreseen by respondents.



Source: J.D. Power and Associates

Marketers such as GM's Cadillac division build a number of their integrated marketing programs around the lifestyles of their affluent target prospects.

"When they are involved in an activity, they tend to be very passionate about it," says Peter Levin, director of advertising for Cadillac.

All this demand to better identify prospective customers calls for additional emphasis on research by marketers and agencies.

"Our research budget has quadrupled in order to fine-tune our marketing," says FCB's Mr. Somerset. "Even after the recession, we aren't going to abandon that."

Mr. Somerset is among those who suggest some media organizations aren't keeping pace with the needs and sophisticated approaches of auto marketers.

Mr. Guarascio says many media organizations' lack of expertise hinders them from forming substantial partnerships with auto marketers.

"Our divisions have talent in the areas of advertising, marketing, merchandising, public relations, sales and event marketing, and we're way ahead of the media in terms of the ability to know how to use those things," he says. "And we don't have the time to educate the media."

For all the recent change in automotive marketing, the next several years may be even more dramatic, says Mr. O'Connor. He sees continued advances in technology making it possible to "start a dialogue with consumers" rather than just put out a message.

Direct contact

He suggests a scenario in which a consumer at home, viewing an auto dealer commercial, will call directly to a salesman who can answer questions and offer to bring over a car for a test drive. Or, a viewer watching a TV commercial might push a button that results in the printing of an invitation and rebate coupon for a test drive at a nearby dealership.

So is this advertising or promotion? For automakers, the answer isn't important, says Mr. O'Connor. "What is important is that you have a seriously qualified prospect to follow up on for a sale."

For the mass media, it's another story entirely. ☐

Cleveland Horton contributed to this story.

'Acceptable graffiti' test limits

Some examples of targeting audiences with niche media:

Videos are big with automakers. Chrysler Corp. and General Motors Corp.'s Pontiac division both used lightweight, relatively inexpensive videocassettes to promote minivans to hundreds of thousands of potential buyers in direct mail campaigns last year.

Chevrolet sent similar tapes for its Corvette to potential buyers.

Chrysler's Dodge Division has three spots from its agency, BBDO Worldwide, Southfield, Mich., on the recent HBO Video production of *Sports Illustrated's* "Behind the Scenes: The Official Swimsuit Video."

Luxury automakers such as GM's Cadillac division find niche marketing tools can fit their affluent prospects' lifestyles. "They're very active," says Peter Levin, Cadillac's director of advertising. "So it's difficult to catch them using traditional forms of media."

Cadillac will use a 23-minute video as part of the launch of the 1993 Allante, which begins a regional rollout in late April. The video was produced by ADventure, Farmington Hills, Mich.

Saab Cars USA is also using a direct mail video. It is promoting its special 9000 CD Turbo Griffin Edition.

The video, from Saab agency Angotti, Thomas, Hedge, New York, was sent to 50,000 prospects with household incomes of $100,000 or more; names were culled from the subscription rolls of *Inc.*, *Money* and *The Wall Street Journal*.

Other than video, Pontiac, Chevrolet and Buick have all committed to test three-sided boards on trucks in the Atlanta area with Patterson's Mobile Media.

In a project called "wild postings" to support the Miata launch, Mazda Motor of America hung posters in a dozen cities at construction sites and other places normally used for movie posters.

"We use [the method] all the time for film releases, and the more I sat in on meetings for the creative and media of the campaign, I realized that the movie audience was a good subset of our prospects," says Tom Somerset, senior VP-director of marketing services at Foote, Cone & Belding, Santa Ana, Calif., agency for Mazda. "It has a little bit of an attitude. It's sort of acceptable graffiti."

Computers offer another area. BMW of North America, along with nine other automakers, advertises on the computer information service Prodigy, which reaches 1.4 million subscribers.

The Jeep/Eagle Division of Chrysler recently ran a computer disc commercial in a disc-based magazine called *PC Life*, says Randy Schroeder, exec VP-management director/media, Campbell-Mithun-Esty, Southfield, Mich. The commercial was similar to a TV spot, Mr. Schroeder says, but was not as graphically oriented. ☐

—John P. Cortez

Niche

(Continued from Page S-3)

believe the future of niche marketing isn't in toilet stalls, but databases. Database marketing is the key that allows automakers to communicate with consumers at each phase of the purchase cycle.

Technology will alter the way messages are sent to prospective car buyers and who receives what message, says Audi's Mr. Hilverda.

"I'm a firm believer that [eventually] you should be able to say, 'I want my commercial only to go to these households' and then you can individually select who sees your spot." ☐

Raymond Serafin and Cleveland Horton contributed to this story.

Who did that ad?

The young copywriters behind the agency wheels of some hot cars.

Ironing clothes led to this award-winning ad.

Teen passion warms Rubin shop

Jack Fund spent his wonder years hanging around the garage with his buddies.

"I had a '67 Mustang fastback and it was my pride and joy," he recalls. "I also had a '67 Shelby."

Then came college, and thoughts of cars got parked. He went into advertising, first with Gerber Advertising in Portland, Ore., for about three years. Now, at 31, he's working on cars again as senior copywriter at Rubin Postaer & Associates, Santa Monica, Calif., where he works on the American Honda Motor Co. account.

Fund

The grease that got under his nails as a teenager has been a plus. "It certainly helps to be able to get into the mind-set of someone [who loves cars]," he says. "It's [also] nice knowing when people are talking about all this technical stuff you can go, 'oh, you mean it means this' and strip it down into something that someone can actually understand."

He didn't have cars on his mind when he left Portland.

"I finally just said I've got to get out of here, I've got to work on something high profile. So I came down to Los Angeles without a job and connected up with Larry [Postaer, agency principal and exec VP-creative director]. He had some good vibes for me and I from him. I've been working here for three years."

In retrospect, it seems fitting that he wound up at Rubin Postaer. "I always thought, 'I hope I can work in a place like that and do stuff like that.' "

He says his ideas for Honda commercials can come from anywhere. "They just come out of the ether. You'll get a strategy handed down for a certain car and you'll look at it and stare at your [art director] partner for days on end and out of nowhere it will just click and you'll go, 'What if we did this?' "

He says one great idea came to him when he was ironing. "My mind was wandering, and I just thought of something," he says. The campaign he thought of featured dozens of vanity license plates and later won several awards, despite coming out only weeks before a similar ad for Subaru of America.

Sometimes he gets inspiration on the road.

"We were working the Civic last year. I borrowed the car and put 900 miles on it." The weekend drive resulted in a spot that opened on a blacktop road. Toward the end, the car moves past and the voice-over says, "Feel free to hum along."

"Basically that one came from doing exactly that," he says. "Driving for six hours, just cruising along like at 65-70, putting your mind on hold and just the car was perfect. You could cruise all day like that." ☐

Regional tastes

(Continued from Page S-4)

the so-called national media to offer such things as split-runs in magazines and regional feeds for the networks. But there are ways to fine-tune even further today.

"Information today is so much better that you can go further than regionalize your message," says Vic Olesen, president of Vic Olesen & Partners, Los Angeles, a consultant to General Motors Corp. "Now you sectionalize, 'city-ize,' even 'block-ize.' "

Mercedes' split account

A recent dramatic example of the regionalization trend came this February when Mercedes-Benz of North America split its account, estimated at $130 million in combined national and regional spending. Scali, McCabe, Sloves, New York, was named to handle national, image-creating advertising while its affiliate, the Martin Agency in Richmond, Va., will handle regional, tactical-oriented work.

The Mercedes agency split follows a decision by the German importer in late 1990 to decentralize its U.S. operations, shifting most authority to four regional organizations.

Albert Weiss, general manager-marketing communications at Mercedes, says those regional organizations now control about half of Mercedes' total budget for ad spending, a percentage expected to grow over the next few years.

General Motors Corp.'s Chevrolet division and Nissan Motor Corp. USA already have extensive regional ad programs in place.

Chevrolet spends an estimated $75 million, or 20% of its ad budget, on regional ad efforts controlled by four area marketing managers, who focus their efforts on core products with volume and growth potential.

Chevy tailors product

"Different products appeal to different markets," says Richard O'Connor, chairman-ceo of Lintas:Campbell-Ewald, Warren, Mich., which handles Chevrolet's national advertising and oversees regional offices that work with Chevy's regional marketing teams.

"Texas is a huge market for Suburbans [Chevrolet's full-size sport utility truck]," says Mr. O'Connor. Regional advertising created for that market pitches the Suburban as "the national car of Texas."

"But if you go to the Northeast, you can just about forget selling Suburbans. You have to put your money where your prospective customers are," Mr. O'Connor says.

Regions choose media

At Nissan, fully 50% of its estimated $250 million ad budget is doled out to its seven regions. And each region carries autonomy in choosing media.

"This is designed to let us address problems or attack opportunities as locally as possible," says Earl J. Hesterberg, VP-general manager, Nissan division.

Despite higher costs per thousand, regional media programs become more efficient as they eliminate waste, Mr. Hesterberg says. "We need to spend more efficiently and we need to move quicker than the other guy."

Nissan effectively eliminated its regional dealer groups several years ago and consolidated the work at its national agency, Chiat/Day/-Mojo, Venice, Calif. The move was prompted primarily by the need to make sure regional campaigns dovetailed with national ads.

> **"If you only had a dollar to spend, you'd go to the place you sell most of your cars."**

Nissan and other Japanese import marketers learned to exploit nontraditional media strategies in part because of necessity. Their domestic competitors enjoyed well-established, national distribution and held long-term relationships with the national media. That left the imports locked out of many of the traditional network TV programs aimed at the prime car-buying demographics.

In many cases, the imports have found that spot TV allows them to direct their ad messages to where their distribution is strongest.

"The old 80/20 or 70/30 rule applies," says Tom Somerset, senior VP-director of marketing services, Foote, Cone & Belding, Santa Ana, Calif., agency for Mazda Motor of America. He points out that the majority of sales come from a fraction of the overall dealer body.

"If you only had a dollar to spend, you'd go to the place you sell most of your cars," he says.

Other marketers also are exploring regional strategies, even if they haven't decentralized their operations. GM's Pontiac division in the past has run California-only outdoor advertising, to reach the mobile West Coast crowd. Ford last year ran some Escort TV spots created specifically to boost California sales.

Three reasons

Ford's Mr. Magee lists three factors as driving regional marketing programs: a desire to test a particular concept before going national; a way to capitalize on a marketer's strength or adjusting to a particularly difficult competitor; or differences in weather that affect consumer preferences when it comes to choices, such as front-wheel drive vs. rear-wheel drive or two- vs. four-wheel drive.

"There are times when regionalization is not only economical, but the only logical thing to do" because of regional biases toward products, says Randy Schroeder, exec VP, management director-media at Campbell-Mithun-Esty, Southfield, Mich., which handles both national and dealer group advertising for Jeep/Eagle.

Jeep/Eagle dealer regional ad groups have taken the unusual step of pooling their funds a couple of times to buy network time, which is considerably less expensive than spot TV on a CPM basis.

Mr. Schroeder says the agency now is looking at ways of matching up Jeep or Eagle products with those of other Chrysler divisions.

Confusion factor looms

One pitfall to regionalization is the increased chance for producing confusing and conflicting brand images. Some marketers such as Nissan and Chrysler keep the conflict to a minimum because national agencies handle dealer marketing groups. But General Motors' dealer ad groups are virtually all handled by agencies other than the ones that create national advertising.

"The real issue in dealer marketing is to make sure the messages by the factory and dealer marketing group are complementary," says Philip Guarascio, GM's executive-in-charge of corporate marketing and advertising. "We make a lot of effort to make sure dealers understand the value of that." ☐

Who did that ad?

The young copywriters behind the agency wheels of some hot cars.

Treating cars like just another item

Phil Glist took a course at the Advertising Center and got lucky.

One of his teachers was Ed Cole, co-creative director at Foote, Cone & Belding, Santa Ana, Calif.

"I showed him my portfolio after I finished his class," Mr. Glist recalls. At the time, Mr. Cole was making changes in the agency's creative department, and Mr. Glist landed a job writing copy for the Mazda Motor of America account. "It's pretty unusual to get the kind of TV experience that I've been getting," says Mr. Glist, who had been tending bar and waiting tables.

"Jalapenos" helped make the Mazda MX-3 a hot commodity.

The 29-year-old copywriter says he isn't a car nut, but he's learning. "They weren't looking for people who were car nuts. It's easier for people like myself who just treat cars as another product to get inside the heads of people who look at them the same way, as pretty much a big-ticket purchase or an expensive thing to buy," he says.

Sometimes knowing details about the car is a must, so Mr. Glist is picking up expertise quickly. "I had to write an insert [for Mazda's RX-7] that is directed at car buffs—all about the rotary engine and power-to-weight ratio," he says.

His key project has been launching Mazda's MX-3.

"Since it was a new car, we thought the styling would stand out from the other cars, like the Paseo it was competing with. And it was the only one with a six-cylinder engine, so you had to communicate that.

"But we wanted to communicate that this was not a car that everybody was going to like," he says. "Mazda's in a unique position of being a niche marketer."

The result was the "Jalapenos" spot.

"We took a fairly loose storyboard to a fairly young director named Steve Chase, who did wonderful things with the visual side, as did my partner, [Art Director] Kevin Murphy," he says. "It's funny because Mazda's advertising is not the hippest generally. It's real emotion-oriented but it's not usually cutting edge. We got a lot of nice stuff in there. And from what I hear, the car's doing real well."

The campaign drew attention inside the ad world.

"Other people in the agency have come to me and said they've gotten calls from friends in the industry and in production and said, 'Who's the director?' 'Who's the editor?' Actually the best response was from an art director here who asked me, 'How do you get something like that past a client?' "

Even for a guy who's not a car nut, sometimes you've just got to get behind the wheel and put the pedal to the metal. "I drove the new RX-7. It was amazing—after researching it and writing it for a good eight months—to actually finally get in the car and drive it. Theory cannot do justice to it. It's really much more fun. I got it up to a hundred."

And what does he drive now? "I bought a year-old Miata from someone who had a baby and couldn't use a two-seater anymore." ☐

Ford explores teamwork

In the process, carmaker discovers mother lode

By Joseph M. Winski

Team marketing is proving successful at Ford Motor Co., which first used the market-driven approach, at least partially, with its "Team Taurus" program. Out of that came the stylistically bold and successful Ford Taurus and Mercury Sable midsize cars in 1985.

Ford refined the idea of teams working under strong managers in 1987 and credits this new approach for some of the success of its hot Ford Explorer sport utility vehicle.

Introduced in March 1990, the four-door, four-wheel-drive Explorer rapidly overtook Chrysler Corp.'s Jeep Cherokee to become the country's most popular sport utility vehicle. Its sales last year soared 37%, making it the seventh-best-selling vehicle, the first time a sport utility model has cracked the top 10.

Ford has created three so-called "world-class timing" teams to develop its next generation Probe, Thunderbird and Mustang. Designed to get vehicles from concept to market in about three years, they consist of designers, engineers, buyers, marketers and others who work at the same location and report directly to the product manager rather than their functional bosses.

Marketers on the teams "have a great deal of input into the design of the car," says Steve Odell, Ford Division marketing plans manager for specialty cars. They "constantly remind the team what the customer wants. That is their prime reason for being there." ☐

Listening

(Continued from Page S-8)

cess. When a second fuel crisis occurred in 1979, Japanese car sales spurted again.

This far and no farther, Detroit then said. GM introduced its downsized, front-wheel-drive X-cars; Ford launched its small Ford Escort and Mercury Lynx, which it billed as "world cars." Chrysler bet its future on the K-cars, of which Mr. Iacocca said in ads: "America's not going to be pushed around anymore."

Detroit also demanded, and got, "voluntary" import restrictions on Japanese autos.

The economy improved and the yen strengthened—making Japanese cars more expensive in dollars. The fuel crisis abated, big cars began to sell again and U.S. carmakers posted record profits.

Record losses

But by the end of the 1980s, with another recession looming, Chrysler was once again in deep trouble, GM was frantically paring excess capacity and the Big 3 were heading for record losses.

Detroit, it turned out, hadn't really changed at all. It still managed for short-term profits and still turned out cars through its vertical "chimney" system, in which each function, from design to marketing, operated in virtual isolation.

Marketing was a separate but hardly equal chimney. GM, long dominated by financial executives, didn't even have a consumer market research division until 1985, auto analyst Maryann Keller reported in her 1989 book on the automaker.

Historically, Theodor R. Cunningham, Chrysler exec VP-sales and marketing, admitted in a speech at the *Automotive News* World Congress in January, "marketing in Detroit has always focused on moving the 'iron' off the shelf, instead of deciding what to put *on* the shelf in the first place."

The Japanese take marketing much more seriously. Kim B. Clark, a Harvard Business School professor who has studied Japanese auto production, attributes Honda's success, for example, to project teams that "focus the whole [product] development organization on customer satisfaction."

Team members, chosen from all the disciplines involved, including marketing, work together under strong "product managers" on everything.

"Detroit has always focused on moving the 'iron.' "

Keeping an eye out

Marketing is hardly the sole province of marketing executives. Mr. Clark tells of Honda product managers who "spend hours watching people on the street, observing styles and listening to conversations. Department stores, sports arenas, museums and discotheques are all part of their 'market research' beat."

The Japanese strategy, says Mr. Kotler, was to establish a beachhead with high-quality small cars that built consumer loyalty and then move up-market with more expensive and more profitable larger cars.

Thus, for example, the Honda Civic was followed by the Honda Accord, then a larger Accord and, most recently, the Acura Legend.

Honda has been "absolutely brilliant" in moving with its market, FCB's Ms. Cutler says. "There's never been a reason to leave the franchise: If you're ready to move up, they've got it for you."

Detroit belatedly is conceding the Japanese know a thing or two. Ford Motor Co. partly embraced teams (*see accompanying story above*). General Motors unabashedly stole from the Japanese in setting up Saturn Corp. as an independent operation—in effect a large project "team."

Saturn, whose sales are soaring in a down market, kept its eye firmly on its target—buyers of inexpensive Japanese imports, interviewing thousands of them in developing the car.

Saturn also selected dealers carefully, saturating them with the gospel of customer satisfaction, including elimination of the price haggling that turns off many car buyers.

Walls tumble down

At the "reinvented" Chrysler, as touted in a current corporate ad campaign, the walls between functions have come down and marketers are being listened to, rather than talked at.

"That," says John Damoose, Chrysler VP-marketing, "is a very vital change at Chrysler Corp."

The company organized itself into four "platform teams"—for large cars, small cars, trucks and minivans—in January 1989. "The platform teams have allowed us to *truly* get the voice of the customer into the product development process," says Mr. Damoose.

Chrysler will tell you where it got the idea: from Honda. ☐

Encore possible for adman Iacocca

So intertwined with ad message, it appears hard to unhinge ceo from commercials too quickly

By Mary Connelly

Lee Iacocca has become so synonymous with Chrysler Corp. the company has found work for the chairman after he retires.

When he steps down as ceo at year's end, Mr. Iacocca will keep his hand on the wheel at Chrysler as chairman of the five-member executive committee. He says he will no longer be the corporate advertising spokesman, but he has said that before and been wrong.

The heavy use of Mr. Iacocca in this, his last year, indicates the automaker may have a difficult time breaking the marketing tie to the highly visible leader, who was swept into the role of public spokesman during the company's brush with bankruptcy in 1979.

This year, Mr. Iacocca will appear in campaigns for two crucial products: the 1993 Jeep Grand Cherokee and a new trio of 1993 mid-size sedans.

The Iacocca advertising is part of an 18-month corporate campaign, created by Bozell, New York, that broke during the 1992 Winter Olympics in February.

Image booster

The initial effort in the drive was designed to improve Chrysler's image against foreign brands. In it, Mr. Iacocca stresses Chrysler's restructuring of its product development process, the construction of a $1 billion technology center and new products.

Appearing with three products—the Dodge Viper sports car, Grand Cherokee and Dodge Intrepid, one of the mid-size sedans—he acknowledges the foreign competition. While implying some consumers don't have a high opinion of U.S.-nameplate vehicles, he claims Chrysler vehicles can compete with the best in the world.

As the year goes on, his role will be even more important.

His TV spot for the launch of the Grand Cherokee is scheduled for spring. The vehicle is Chrysler's bid to regain dominance of the sport-utility market, lost to the Ford Explorer.

Later in the year, the Chrysler chairman will be seen in advertising for the Intrepid, Chrysler Concorde and Eagle Vision, the sedans the company maintains have reached standards of world-class manufacturing quality.

At the March 16 press conference where Mr. Iacocca announced that Robert Eaton, the former head of General Motors Corp.'s European operations, would succeed him as chairman, Mr. Iacocca said he had one additional commercial to shoot, presumably for the LH sedans.

Lee Iacocca's ad importance will increase this fall when the Intrepid, Concorde and Vision sedans are launched.

"It's hard work," Mr. Iacocca said in explaining why he didn't want to be the corporate spokesman any longer. Referring to the shooting for the Grand Cherokee commercial, which he completed in March, he said: "This one was 100 takes and eight hours. I don't get paid for it."

"I'm outta here," he added.

The LH sedans are Chrysler's first all-new cars since 1980 and critical to the company's future in the car business.

And this yearlong buildup of Mr. Iacocca's image, culminating in his presence in the ads for the sedans, may make it especially difficult for Chrysler to drop him come December.

Indeed, his use this year, during a lengthy manufacturing launch for the sedans with initial limited vehicle supply, may almost ensure an encore performance in 1993, when production volume will increase.

Warning signs

But one observer warns against keeping Mr. Iacocca in front of the cameras for too long.

There are signs Mr. Iacocca's effectiveness is waning, says Steven Levitt, president of researcher Marketing Evaluations/TVQ.

In an annual evaluation of 1,474 American personalities in 1991, the researcher found Mr. Iacocca's positive rating dropped four percentage points from 1987 to 1991, while his negative rating rose six percentage points.

"I'd look at these numbers and I would worry," Mr. Levitt says. "I would wonder if there is a more effective way to advertise. Lee Iacocca is not generating the same response as he did four years ago."

But a Chrysler marketing spokeswoman says Chrysler's own research conducted prior to the creation of the new Bozell campaign disputes those findings.

"He is believable and sincere and he has high recognition numbers," she says.

He also he seems to satisfy what Chrysler considers an important goal of its current advertising.

Japan Inc.

"It used to be that all the Japanese car companies were perceived as one—Japan Inc. There was no real differentiation," says John Damoose, Chrysler's VP-marketing, in an internal company publication. "Today, the domestic Big 3 are seen as indistinct. Today, it's the Big 3 whose image has blended together as Detroit, which is often used as a term of derision. A big part of our goal is to separate Chrysler from the domestic Big 3."

Chrysler still seems to think Mr. Iacocca, today and maybe sometime into the future, can do that job better than anyone else. ☐

Green

(Continued from Page S-34)

closer to market. Their exhausts are considered less dangerous to the atmosphere than that of gas or diesel engines. "While [alternative] fuels have positive attributes, there are some trade-offs," says Ford's Mr. Fenstermacher.

Trade-off problems

"The principal trade-off is range and convenience. Alternative fuels are not widely available."

Flexible-fuel vehicles, which operate on a combination of fuels including gasoline, already are available in limited quantities to companies with private fleets.

Chevrolet is to deliver 1,200 1992 Luminas that operate on a mixture of 85% methanol and 15% unleaded gasoline.

"The lessons learned as consumers adapt to alternative-fuel vehicles will be invaluable," says Gery Jankovits, the fleet manager for alternative fuel vehicles at Chevrolet.

"This is uncharted territory. No one has a roadmap yet."

Summer tests

Chrysler plans to start general sales of methanol-burning Dodge Spirits and Plymouth Acclaims in California this summer. Its offerings are flexible-fuel vehicles because they can use M85, unleaded gas or any mixture.

The federal government has ordered 2,500 of the cars, but dealers in California will be able to sell them to anyone. Chrysler expects to sell 100,000 of the vehicles in the 1994 model year.

This week, Chrysler intends to deliver 50 full-size vans that run exclusively on compressed natural gas to a California fleet.

An issue beyond fuel is the ozone-depleting chlorinated fluorocarbon refrigerants used in auto air conditioners. The refrigerant usually known by its trade name Freon is being replaced with a CFC-free refrigerant.

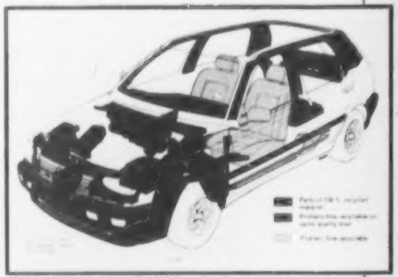
Although the new refrigerant requires costly changes to air conditioning systems, automakers have been quick to accept it, well before a worldwide ban on CFC is scheduled to start in 2000.

On March 2, Ford became the first U.S. manufacturer to build CFC-free Taurus models and plans to test-market the cars in Texas this year. Mercedes-Benz is also building CFC-free cars.

Manufacturers expect to bear more of the burden for recycling what they sell in the near future.

Volkswagen AG in Germany became the first automaker in the world to set up a pilot program to recycle scrap cars in 1990.

BMW of North America is leading the way in the U.S. It will start a pilot recycling program this spring with the Automotive Dismantlers & Recyclers Association.



Volkswagen's Golf includes recyclable parts, indicated by the shaded areas. Parts are coded to make the separation process easier.

The plan combines recycling with marketing incentives to sell new BMWs. During the first phase of the program, BMW will offer a $500 discount on a new BMW purchase when owners return their worn-out BMWs to authorized recycling centers.

Rich Brooks, a spokesman for BMW, says vehicle recycling isn't yet a popular buying consideration, but he notes that "people who buy our products are predisposed to environmental concerns and apt to do something about it."

Awareness ads

American Honda Motor Co. is among the few companies in the U.S. that created advertising devoted to raising awareness about the environment. It's marketing the 1992 Civic VX with a campaign that's literally green.

A print ad in the campaign is in green ink, right down to the Honda logo, which is usually blue. The headline, "Think of what you can save," refers to money, gasoline and the environment.

The corresponding TV spot shows the car with a forest glen growing up around it. ☐

Corporate ad spending and its efficiency

1991 vs. 1990 model years, ranked by lowest expenditure to unit sold

Company	1991 model year adv. exp. (in thousands)	Pct. change 91 vs. 90	1991 model year unit sales	1991 adv. exp. per unit sold	1990 adv. exp. per unit sold	Pct. change exp. per unit

Toyota takes bow

(Continued from Page S-14)

1 in promotions.

"They have many national sales events and spend gobs of money supporting them," Mr. Hagelstein says. "They bang the hell out of key markets."

All of this helps to raise awareness.

"Toyota's marketing is extremely traditional, almost domestic," says Mark Gjovik, exec VP-group account director, D'Arcy Masius Benton & Bowles, Bloomfield Hills, Mich. "They do the basics well. They pre-plan their promotions."

Although Toyota's advertising is rarely cited for creative prowess, the company's competitors gave upscale Lexus the highest score in the survey.

"That's probably because of the introduction of the SC400," says Mr. Postaer. "That was a good campaign, the opening wave, including that double fold-out insert. Even I liked that."

Others praise the entire introduction of the new division. "They really left no stone unturned," says Mr. Peterson. "The launch of Lexus was textbook perfect."

Team One's advertising earned high praise for its restraint as well as its attention to detail.

"Lexus' creative is almost sublime," says Mr. Gjovik. "It communicates the idea that 'god is in the details,' and it tells it to you one detail at a time."

Many car commercials try to cram in as many details about the vehicle as possible, a temptation Lexus has avoided.

Corolla. Over 15 million happy memories, and still counting.
"I love what you do for me"
TOYOTA

Having entered the U.S. in 1958, Toyota can now market its cars with American nostalgia.

"It is always tempting to try and put too much in a commercial," says Jay Qualman Jr., general director of advertising for General Motors Corp.'s Buick Division. "When you have 30 seconds, someone will say, "let's talk about four or five key product features."

Lexus tends to focus on a single attribute, such as smoothness of ride in its "Champagne Glasses" commercial or the sound system in its "Rain" spot.

"One exquisite detail after another," says Mr. Gjovik.

In the area of sports marketing, Toyota tied with Chevrolet for the highest score in the Power survey. Toyota's high ranking probably can be attributed to years of high-profile sponsorships.

Examples include the Toyota Grand Prix and its name recognition, as well as a $270 million, four-year deal with CBS for Major League Baseball and its support of the Skins Game golf tournament. The latter draws one of the biggest ratings of any golf event.

Toyota didn't score as well on the subject of green marketing, but another Japanese car company did: Honda.

Honda, which sells more cars in the U.S. than Toyota, has only produced one print ad (printed in green, including the traditionally blue logo) and one spot with environmental themes. However, it has consistently promoted high mileage for many years.

Honda's advertising also stands out because so few automakers in the U.S. currently use environmental themes in their advertising.

With much of the envy of Toyota stemming from its marketing war chest, and given that all the Japanese car companies now face significant profit reductions, Toyota's hold on the leadership marketing position probably will soon be put to the test. ☐

Raymond Serafin contributed to this story.

Spending hits $3.5 billion

Maserati tops, Ford leads domestics in ad-to-sales ratio

For the 1991 model year, automobile marketers invested about $3.5 billion in U.S. advertising in the measured media monitored by LNA/Arbitron Multi-Media Service (October 1990 through September 1991).

The 24 marketers sold slightly more than 12.5 million vehicles, for an industry ad-to-sales ratio of $276 per unit (*see chart at left*).

Some marketers did better than others in the efficiency of their advertising buys. Maserati Automobiles was No. 1, with an ad-to-sales ratio of $71. But the importer's ad expenditure was a paltry $17,000, according to LNA.

Among the more mass-market car companies, Ford Motor Co. managed an efficient $147 in advertising per unit sold. Ford spent about $427 million on the measured media. Of the Japanese nameplates, American Honda Motor Co. followed No. 5 General Motors Corp. with $273 in ads per unit sold.

Below, the Top 5 spending nameplates in nine media are given for the '91 model year. ☐

Top 5 in Network TV spending

No waking up from nightmare

New England auto dealer: 'Next person to go is me'

By Jim Henry

Automobile dealers in the Northeast are using every club in the bag to drum up business.

Last year was the second year of a nationwide recession in auto sales, but many Northeast dealers were getting hammered for the third or fourth year.

"I lost money [in 1991] for the first time," says Robert Filardi, who owns Dor Porsche-Buick in Roslyn, N.Y. This happened despite cutting his payroll to 27 employees from a high of about 40.

Surviving dealers are hanging on by unglamorous, tried-and-true methods—selling used cars, promoting service and parts and cutting advertising. (To save money, one dealer says he even cut his trash pick-up from twice to once a week.)

Such tactics might not seem big, but survival has replaced profit as the goal for many dealers.

"It was a horrible year," Mr. Filardi recalls. He sold only 35 new Porsches, compared with 175 in 1986.

He was encouraged that he sold seven Porsches and 32 Buicks this past January, the best month he's had for Buick since he picked up the franchise about a year ago.

Conditions have been particularly bad in New England because of banking and real estate crises on top of unemployment.

In Rhode Island, for instance, the private fund that insured the state's savings & loans was forced into bankruptcy in January 1990.

The state froze the bank accounts of about a third of the state's residents, and some still don't have their money back.

"It seems like everything is happening at the same time," says Aldo Sammartino, a dealer in East Greenwich, R.I. He has cut his staff to 16 from 25 two years ago.

"I got no place left to cut now," he says. "The next person to go is me."

Mr. Sammartino says selling program cars—cars previously in rental programs for up to about 15,000 miles —has helped him get by. He says his Bay Buick store used to average 480 new cars a year; 200 of the 444 cars he sold last year were used.

"I've become much more active in used cars. I go to the auction at least every other week to look at program cars. I fought it for three or four years, but I have to do it to survive," Mr. Sammartino says.

"I've been in the business 18 years, and I'm working harder now than when I started. You're seeing [dealers] who haven't worked in the business in 10 years back out on the showroom floor again. Guys are going to the auctions that haven't been to the auctions in 25 years," he says.

Many dealers aren't making it. From January 1989 to December 1991, the number of dealerships in the six New England states plus New York, New Jersey and Pennsylvania fell 7.4% to 5,067, according to National Automobile Dealers Association. The U.S. total fell 5.5% in the same period, while Massachusetts dealerships fell 11.5%, Rhode Island, 13.3%.

"I didn't make it," says a New York-area dealer who filed for Chapter 11 bankruptcy protection last year, after spending half his life working at the family dealership. "I'm still convinced we did everything right that we could control," says the dealer who asked not to be named.

"In the New York area, I don't see an end in sight," he says. "Things are so bad here, even the used-car business is hurting."

Some automakers have tailored their operations to help shore up the Northeast.

Subaru of America, for instance, has a pilot captive-financing arm in New England, in partnership with Nissan Motor Acceptance Corp. It's to help dealers with wholesale and retail financing.

Subaru of New England, an independent distributor, has a much higher percentage of exclusive Subaru dealers than the rest of the country, and the exclusive franchises don't have ready-made financing through other franchises.

Pontiac's New York-based zone started a low-cost lease program for the '91 model year that was so successful the idea was used nationwide.

The program has since been discontinued, but it was "probably the savior of Pontiac in this area" last year, says longtime dealer Eli Bloom, owner of Bloom Pontiac and Saturn of Long Island City (N.Y.).

Mr. Bloom says he still has faith a cyclical business like the auto industry is bound to come back—but says the cycles have gotten longer.

"To say it's the worst ever, I don't know about that; but it's as bad as I've seen it, and it's lasting longer," he says.

He says he has resorted to "very few" layoffs, and has cut, but not eliminated, advertising.

"You can't cut your insurance. You can't cut your heat and light and power . . . So you look at things you can control," Mr. Bloom says.

Is there an upturn in sight?

Mr. Bloom says showroom traffic picked up in January. "It didn't translate into sales to the extent I would like; people are taking longer to make a decision. But the encouraging thing is an awful lot of people are out there looking, and where there's smoke there's fire." ☐

Ford dealer spending leads pack

The vehicles of Ford Motor Co. top other automakers in ad support from local dealers and dealer association groups, according to figures from LNA/Arbitron Multi-Media Service, with a total of about $173 million (*chart below*).

In efficiency of dealer/-dealer group advertising, General Motors Corp.'s Chevrolet and Geo nameplates came out on top, with Ford No. 2 (*chart at right*).

National Automobile Dealers Association estimates dealers spent $3.6 billion on ads and promotions in 1990, using dealer-supplied figures. ☐

Program cars turn quagmire

Carmakers' effort to control flow in Florida founders

By Lindsay Chappell

Florida is the center of a nettlesome problem for carmakers.

Last year, about 20 million tourists arrived in Florida by plane, many of them needing a car. As a result, Florida rental agencies purchased about 300,000 new cars. That's 3% of all the new-car sales in the U.S.

The automakers aren't complaining about sending that many cars into Florida, especially since Ford Motor Co., General Motors Corp. and Chrysler Corp. own pieces of major rental chains. The problem is getting the cars out of Florida four to six months after original delivery.

After a few months and a few thousand miles, these rental cars—and those in daily rental fleets elsewhere in the country—are returned to the retail market for resale as so-called "program" cars.

But a recent gambit by U.S. carmakers to gain better control of this huge fleet of program cars looks to be petering out.

GM, Chrysler and Ford all established factory-direct operations last year to move thousands of cars a week from daily rental companies to dealers for used-car sales.

But Chrysler shut its operation down early this year. Ford's effort could end by summer, and GM's attempt is hobbling along with a volume of about 2,000 cars a year.

That probably leaves the factories back where they started—letting national auction chains distribute the cars.

That's good news for the auctions, which derived about $5 billion from such cars last year. It's also an indication the program-car phenomenon has become too big for simple solutions.

Rental companies last year bought one-fifth of the nation's entire new-car volume, according to *Auto Rental News*, a trade magazine. Many dealers say the surfeit of low-mileage, good-condition used cars is luring buyers away from new cars.

If program-car mileage is too low, pricing on new cars can be undercut. If program cars aren't evenly redistributed around the country, used-car pricing can be undermined.

Although factories and auctions police the trade to prevent "unauthorized buying," it goes on anyway.

Chrysler last year opened an office in West Palm Beach, Fla., to establish dealer-direct sales. Chrysler contended dealers would find it more efficient to order the used cars from the factory than to travel to an auction. But lack of dealer interest caused its closing.

GM's dealer-direct operation also was launched in Florida. Unlike Chrysler's, it's still in business. Dealers phone or fax the office to find out what vehicles are coming back into the market. The dealers can buy the cars sight unseen at set prices before they're passed along to the auction companies.

These experiments raised eyebrows at the auctions, where the idea was apparently more threatening in theory than in practice. GM moved about 700,000 program cars through auctions last year, Ford moved 350,000, and Chrysler about 250,000.

Dale Hermiller, executive director of GM's fleet redistribution operation in Detroit, is quick to allay the auctions' concerns.

"It's not that we're trying to bypass the auctions and save a lot of money," he says. "The auctions will always be the major redistribution method. Our intention is to try to gain better control of what's happening out there."

Ford took a different direction in its dealer-direct experiment by opening four "123 Ford" stores specializing in existing dealerships in different regions of the country to specialize in program cars.

Indications are sales at those stores have been disappointing so far, and Ford appears to be reconsidering the idea.

Carmakers now are looking for other means of regaining market control. They're reducing the overall program-car volume by selling the rental companies fewer cars during the year. In 1991, most rental agencies turned their fleets over three times, keeping cars an average of four months. Due to factory policy, many will cut back to a six-month cycle this year.

That also will push up the mileage on the average program car. Mr. Hermiller says the average GM program car showed about 10,000 miles at the beginning of 1991 but had increased to 13,000 by yearend.

Tom Cunningham, Ford's manager of vehicle remarketing, says his company's program cars are beginning to show up near the 20,000-mile level. ☐

In Europe, image is key

As exec puts it, 'Lexus and Infiniti are fantastic cars but lack class'

By Diana T. Kurylko

Writing from Frankfurt

With the prospect of European Community quotas on Japanese cars being dropped in eight years, European manufacturers already are playing up an attribute those competitors won't be able to buy or build: heritage.

And that isn't necessarily the automaker's country of origin.

For a German manufacturer like BMW, it's superior engineering. A.B. Volvo of Sweden has a reputation for safe cars. Italian Alfa Romeo rides on the laurels of engines that won numerous races. The French Renault has savoir-faire.

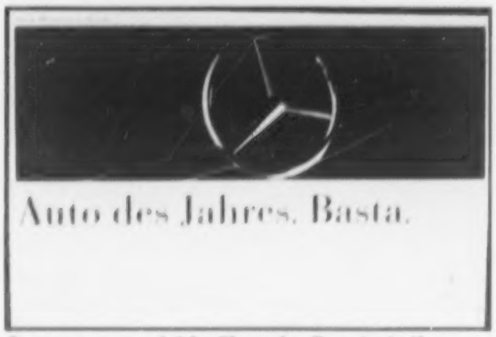
In that subtle European way, the major marques are solidifying images created over decades.

"The Japanese are creating an impetus to have traditional European car manufacturers look at what their cars stand for," says Douglas Thursby-Pelham, management supervisor at ad agency Publicis, London, which handles Renault. "The Japanese are advanced technologically. They are great copiers, but one thing they can't quickly appropriate is heritage. Lexus and Infiniti are fantastic cars, but they lack class."

German-based Volkswagen AG, Europe's No. 1 automaker, is stressing safety and environmental friendliness in its cars.

"As far as safety and the environment go, this is a differentiator. We will be more advanced than the Japanese and the competitors," says Hans Hungerland, member of the VW management board responsible for Volkswagen/-Audi sales worldwide.

Alfa Romeo is climbing upstream and counting on its performance image to lure buyers. It no longer is just building sports cars like the Spider or "pure Alfas" like the 75, high on performance but short on comfort. Alfa models are becoming bigger and more luxurious—competition for Audi, BMW, Mercedes-Benz and Volvo.



German commercial for Mercedes-Benz touts the nameplate as "Car of the Year. Period." European automakers are pushing image hard.

Philip Gamba, VP-marketing at Renault, believes Japanese brands lack the "French touch" of that automaker's designs and credibility. "We have culture and a touch at making cars the Japanese don't," he says.

The major difference between French and Japanese cars is cost, Mr. Gamba says. But he adds, "We have eight years to get on the same level with price and in our way of work."

These days, Renault is "building a car for the occupant with a lot of effort on comfort," he says. "We believe the car cannot be for status; we are not prestige-oriented."

BMW is trying to communicate not the prestige of owning a luxury marque but "the inner value" of its cars, says Richard Gaul, a company spokesman.

"In our price class, safety and comfort will be of more importance than the outlook and presence of being affluent," he says. "To communicate value in products will be of growing importance."

BMW's edge may be its German heritage, but it leaves itself room to assemble cars elsewhere. "BMW is engineering in our environment. Made in Germany or made in Europe will all be the same," he says.

Audi will play up the Germanness of its cars.

Neil Christie, account director on Audi at London agency Bartle Bogle Hegarty, says the Japanese are associated with value for money, high specifications and technical expertise.

"The [European] car market will have to be more focused about developing their individual [brand] images and reputations," he says.

But not every car company will want to stress its country of origin, Mr. Christie says.

"It would be much more difficult for a car company like Rover Group to emphasize its country of origin since the U.K. isn't an appealing country of car manufacturers."

Similarly, Mr. Christie says, Volvo probably will continue to advertise safety rather than its Swedish heritage.

Matsola Palm, exec VP of Volvo, says the company is focusing on four areas that have been key for the Swedish maker: "safety, environmental care, reliability and durability."

But as other carmakers stress these features, Volvo's fight to differentiate itself from the competition will become more difficult, he admits. "If you are in the forefront, the others have to pick up. You cannot stay and wait or you will be passed." ☐

Elena Bowes in London contributed to this story.

In Japan, Detroit dares to compare

By Mary Ann Maskery

Writing from Tokyo

U.S. automakers are trying to change the popular image of their automobiles here by using imported marketing tactics.

Comparative advertising, which General Motors Corp. is trying, historically hasn't gone over well in this country. Direct mail, a cornerstone of Chrysler Corp.'s plan, is expensive and difficult. And new-car showrooms were practically unknown until Ford Motor Co. and Mazda Motor Corp. started using them about a decade ago.

Comparison ads have been legal here since 1986, but GM is the first company to fully exploit the tactic. GM recently unveiled a new print ad from McCann-Erickson Hakuhodo that specifically compares the size, fuel efficiency, quality and price of Cadillac Seville STS with Nissan Motor Corp.'s Infiniti Q45.

"We have felt for a long time there are major misconceptions in Japan about American cars. We want to dispel them," says Jim Steinhagen, VP for General Motors Japan. GM is trying to change the image of American cars as big, expensive gas-guzzlers with inferior quality.

On the surface, the GM campaign is risky. Popular wisdom suggests Japanese consumers have never accepted comparative ads.

"I don't think comparison advertising will increase in Japan because it does not fit the Japanese culture and will not be accepted," says a Hakuhodo agency spokesman.

Yet two previous brushes with the technique suggest it could find some success.

Last May, Pepsi-Cola Co. pulled a TV commercial featuring rap star Hammer that showed a can of Coca-Cola after four Tokyo stations refused to continue running it. In August, two stations resumed play with the cans inked out and an audio reference to Coke bleeped.

Nissan Motor Sales broached the edge of discretion in 1988, when then-President Yutaka Kume named Honda's Prelude as the target for his company's Silvia coupe. Though Mr. Kume's comments at a press introduction were never part of advertising, they were criticized in the press.

Silvia sales overtook Prelude sales seven months after the car was introduced, but Nissan hasn't repeated any such similar move.

The new GM campaign has drawn widespread news coverage, but it's too early to determine how consumers here will react to it.

Yoshikazu Iino, deputy manager for PR at Yanase & Co., GM's distributor, says there has been no negative comment to date. And Hiroshi Kurebayashi, a manager at the Dentsu ad agency, which handles Ford Motor Co., says the GM ad "is done in a reserved tone and will be accepted favorably."

"Comparison advertising . . . does not fit the Japanese culture."

Chrysler Japan Sales, which handles most Chrysler business in Japan with agencies Saatchi & Saatchi Advertising K.K. for Jeep and Bozell Meitsu for Chrysler passenger cars, is using another tactic that's not so controversial as it is difficult.

The marketer isn't running any TV commercials because of the high cost, says Izumi Kato, member of the liaison division for Chrysler Japan Sales, but it's supplementing its print advertising with direct mail.

"The direct mail concept is just beginning in Japan," GM's Mr. Steinhagen says, because many Japanese have a concern for privacy, making it difficult to compile an effective list.

Detroit's Big 3 have made major efforts to expand sales in Japan. GM sales grew 8.8% to 9,261 units in 1991, despite a 10.7% falloff in the import segment during the same period. Ford sold 2,959 imported units, down 50.9%, and Chrysler sold 1,491 cars and Cherokees, up 4.1%.

Ford executives applaud GM's approach. "We think [the campaign] is a very good thing to improve the image of American cars," says Hiroo Tanabe, manager of external affairs for the Ford importer.

Ford has made its own effort to make a dent in the popular image of American cars. Last year, it invited several Japanese journalists to the U.S. for a 1,000-mile test drive from Dearborn, Mich., to Atlanta.

The resulting articles in Japanese car-enthusiast magazines were somewhat critical, says Mr. Tanabe. "But, overall, it was successful. At least they saw the vehicles as they are."

Ford Japan is discussing further ways to promote sales with Autorama, the sales channel jointly owned with Mazda that was set up to sell Ford imports and Ford-badged vehicles built by Mazda. Autorama introduced the concept of showroom sales to Japan when it was formed 10 years ago. ☐

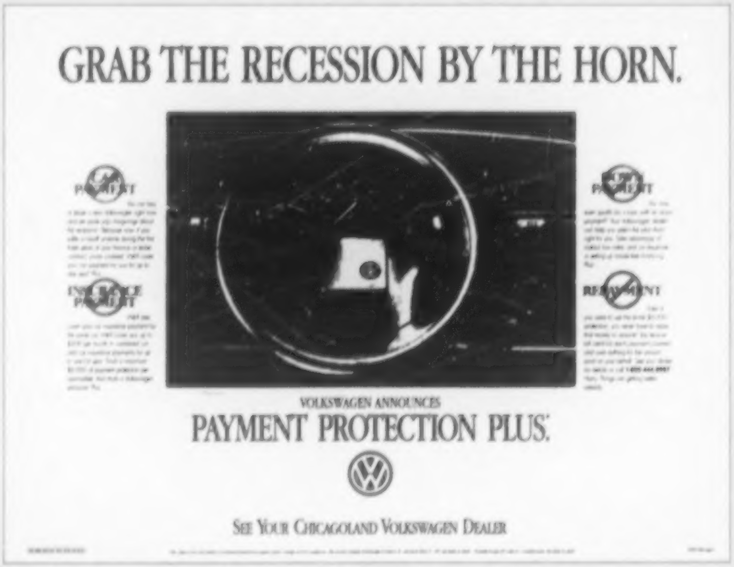
Quality, safety, durability and dash of style bring '92 advertising into focus

◀ Jeep claims the top of the mountain in a wry spot created for the Chrysler Corp. brand by Campbell-Mithun-Esty, Southfield, Mich. Ad executives for an unnamed auto company meet on a mountain with a TV commercial director to discuss a shoot that will demonstrate their product is as good as a Jeep. They solve the problem of how to get their vehicle to the top by agreeing to airlift it by helicopter. The executives then climb into Jeep vehicles to get down from the mountain, as one says, "This is going to be a great commercial."



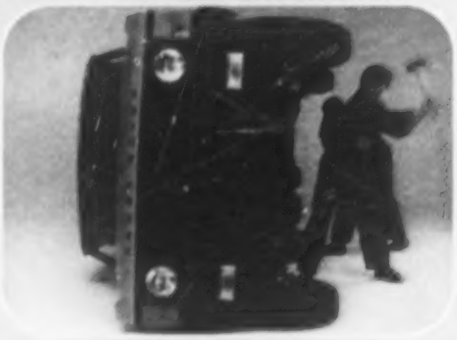
GRAB THE RECESSION BY THE HORN.

VOLKSWAGEN ANNOUNCES

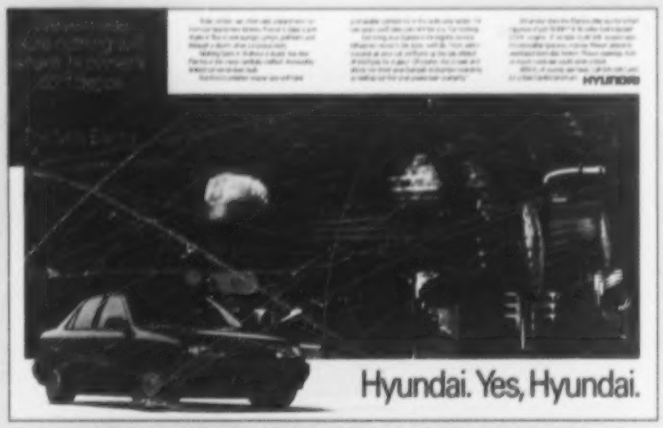
PAYMENT PROTECTION PLUS.

SEE YOUR CHICAGOLAND VOLKSWAGEN DEALER

Range Rover of North America's "Sledgehammer" TV spot for Land Rover stands out in a crowd. The commercial, created by Grace & Rothschild, New York, is set to "The Anvil Chorus" from Wagner's "Tannhauser." Two coverall-clad men use sledgehammers to pound on the underside of a Land Rover that's lying on its side, without damaging the vehicle. Voice-over then says, "before investing in a luxury car, may we suggest you do slightly more than kick the tires." ▶

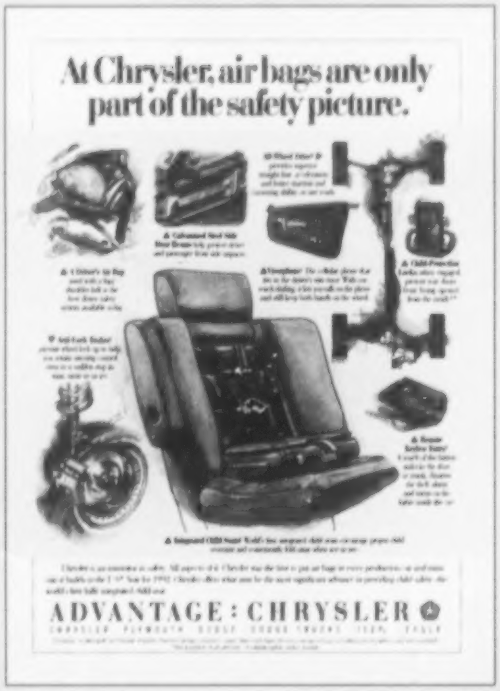


▲ Volkswagen of America broke new marketing ground with its "Payment Protection Plus" program for buyers of VW vehicles. The campaign sparked interest from recession-weary consumers after it was announced in January via TV spots and newspaper ads. Under the program, VW has offered to make up to 12 months of car payments for buyers who are later laid off from their jobs. Monthly payments, plus car insurance, will be paid up to $500. The strategy, developed by VW and DDB Needham Worldwide, Troy, Mich., was meant to restore consumer confidence.



Hyundai. Yes, Hyundai.

▲ Hyundai Motor America decided to address the issue of its product quality during the introduction last fall of the Elantra subcompact sedan. This ad focuses on vehicle testing by Hyundai; a similar TV spot features the Jerry Lee Lewis classic "Whole Lotta Shakin' Goin' On." The ad also introduces Hyundai's ValueCare ownership program, in which all scheduled maintenance for two years or 24,000 miles is free. "About all you pay for is gas," the ad says. Backer Spielvogel Bates, Irvine, Calif., handles the account.



At Chrysler, air bags are only part of the safety picture.

ADVANTAGE: CHRYSLER

◀ Chrysler Corp. staked out a position as a leader in safety, and now it's trying to expand that image by emphasizing a variety of vehicle safety features. The company was the first to offer an integrated child seat, beginning with its 1992 minivans, one of the items featured in this print ad. Bozell, New York, handles Chrysler corporate advertising.

HAVE YOU
DRIVEN
A FORD
LATELY?
Ford

For the 1992 model year, Ford Motor Co.'s Ford Division freshened up its nine-year-old theme line "Have you driven a Ford lately?" with new music and lyrics, still sung by vocalist Kacey Cisyk. A 90-second spot that launched the new style featured emotionally evocative visuals of Americans. J. Walter Thompson USA, Detroit, handles Ford. ▶

Until Seville STS
MOTOR TREND
CAR OF THE YEAR

◀ Cadillac's 1992 Seville and Eldorado advertising helped break down baby-boomer resistance to domestic cars. The General Motors Corp. division is capitalizing on press praise, such as being named car of the year by Petersen Publishing Co.'s *Motor Trend*. Such endorsements are important to skeptical baby boomers, according to marketing executives at Cadillac and its agency, D'Arcy Masius Benton & Bowles, Bloomfield Hills, Mich.

Sales dip, but vibes are good

WILLIAM R. DIEM
Assistant Managing Editor

Car and light-truck sales fell 2.9 percent, to 340,738, in the middle 10 days of March, but there were indications that business continues to get better.

Truck sales were up 2 percent over last year, and the lost car sales seem to have been program cars, sold to daily rental fleets.

"I never heard of a program truck," said Joel Pitcoff, Ford Motor Co.'s sales analyst, explaining why trucks are a good gauge of the retail market. He said that at Ford for the first 20 days of March, retail car sales were up 10 percent and non-program fleet sales were good. Overall, Ford car sales were up 3.5 percent for March 1-20 despite fewer sales to daily-rental firms.

"A year ago, we were in the second of three turn cycles in the daily-rental business," said Pitcoff. But since last spring, Ford has told rental companies to keep cars for six months or 15,000 miles. That means fleets will turn over twice a year instead of three times. Many of last fall's rental units will be due for replacement in April and May.

General Motors sales also are less dependent on fleets this year. "The fleet mix is off 2½ percentage points year to date," said spokeswoman Toni Simonetti. Overall sales are up 4 percent.

For the 10-day period, GM sales dropped 8.8 percent, "but it's tough to put too much emphasis on any 10-day period," said Simonetti. That is mainly because fleet sales are not spread out evenly. For instance, sales of the Cavalier, a popular fleet vehicle, were down more than 3,000 units to 6,020 during the period, indicating a sales bubble last year.

Cadillac sales rose 4.4 percent in the 10 days, thanks to the Seville. Year to date, said Simonetti, Cadillac's fleet mix is 5½ percentage points lower than last year, and "Seville is much stronger on the retail side."

Toyota Motor Sales U.S.A. Inc. had a great period, up 32.2 percent. Its U.S.-built Camry and Corolla models rose 2,911 units, or 38.8 percent.

American Honda Motor Co. Inc., which generally sells fewer than 10 percent of its cars to fleets, was down 11.5 percent for the 10-day period.

Chrysler Corp. sales were estimated to be off 6.6 percent for mid-March. *Automotive News* estimates sales for Chrysler and many imports. AN

ORDERS

Most dealers order for spring upsurge

continued from PAGE 1

President's Day weekend in February, Cunningham said.

Gus Russo, chairman of the Chrysler-Plymouth National Dealer Council, said consumer confidence is strengthening.

"I don't know what happened, but people coming in today have a better attitude and more confidence," Russo said. "And the customers have a better grade of credit-worthiness."

Frank Galeana, chairman of the Dodge National Dealer Council, said he is buying Chrysler Fifth Avenue and Dodge Shadow ES models from other dealers because of inventory shortages at his five dealerships in Detroit, South Carolina and Florida.

Galeana said floor traffic is up 40 to 50 percent over last year, and he is ordering 50 to 75 percent more vehicles than last year.

FORD: "DRAMATIC"

Dealer orders are up at both Ford and Lincoln-Mercury.

Ross Roberts, Ford Division general manager, said most dealers are ordering their maximum allocations, and factories supplying Ford vehicles are working on an ideal 15-day lead time.

"Last year, we were on a three-day lead time on dealer orders," Roberts said, "so this is a dramatic difference."

Roberts said orders were so scarce last year that he would decide on a Thursday if a plant would open the next Monday.

One big boost has been the 25,000 orders for the Crown Victoria police car, which began production this month.

At L-M, spokesman Chuck Snearly said 1992 dealer orders through mid-March are up 36 percent over the same period last year. Snearly said the big winners are the Mercury Sable, Grand Marquis, Topaz and Capri.

Ford and L-M dealers agree that consumer traffic is up.

"We're looking at a Ford year and maybe a Ford decade," said Elvin Poole, general manager of McInerney Ford Inc. in Orlando, Fla.

Poole said he has bought 100 Explorers from the factory and other dealers. "Every doctor in town has to have an Explorer," he said. "They all want green."

Jim North, owner of North Brothers Ford in Westland, Mich., is a member of the Ford Dealer Council. North said his dealer orders are up 15 percent this year, with trucks, Escorts, Tauruses and Tempos his hottest sellers.

GM: POCKETS OF PLUS

GM dealers are not as enthusiastic as Chrysler's and Ford's, although there are pockets of excitement.

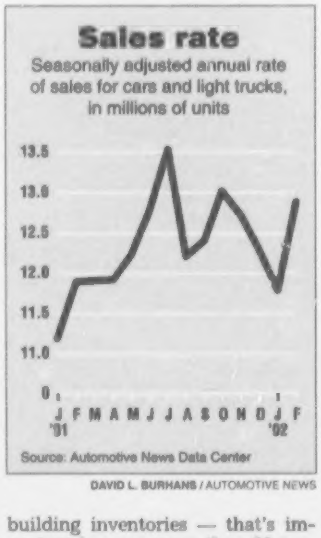
Spokesman Reginald Harris said Pontiac's order bank is up 19 percent as dealers clamor for Grand Ams, Trans Sports and Bonnevilles. "We had a meeting with the LAD (Lansing Automotive Division) people last week to ask for a lot more Grand Ams," Harris said.

Robert Coletta, Buick general manager of sales and service, said many Buick dealers and are planning to order more cars.

Chevrolet spokesman J. David Hudgens said the Chevrolet order bank is up, "particularly in our core, volume products. Dealers are building inventories — that's important because more than 80 percent of our sales are sold out of stock."

Sales rate

Seasonally adjusted annual rate of sales for cars and light trucks, in millions of units



Source: Automotive News Data Center

DAVID L. BURHANS / AUTOMOTIVE NEWS

Spokeswoman Jill Witzenburg said Oldsmobile already has experienced a dealer order surge, especially for the Achieva.

David Bean, owner of John Watson Chevrolet in Ogden, Utah, said he is ordering more vehicles than last year.

"We had a pretty good burst in January and February, but it's been quiet in March," said Bean. "I've seen more business in trucks than cars. What I'm moving in cars are the smaller ones like Geo Metros."

Larry Cummings, owner of Larry Cummings Oldsmobile-GMC in Crawfordsville, Ind., said, "We're having a good month.

"Because of Indiana tax laws, we get into the spring selling season earlier than other places in the country."

He said the Achieva is the hottest Oldsmobile product he has had in a decade. "We got our first Achieva on Jan. 7 and we had delivered 15 by March 7. Eleven of the 15 were leases." Oldsmobile offers a $199-a-month, four-year lease on the Achieva.

At the other end, Cummings said, "The Ninety Eight is extremely slow. The market at that price level is really slow right now."

JAPANESE: MIXED

There are voices of caution.

California megadealer John B.T. Campbell III, who has Saturn, Ford, Mazda, Buick, GMC, and Nissan franchises, said the outlook is mixed.

"It's not 1986 again, but it's better than last year and I'm not complaining," Campbell said. "Ford is doing pretty well. Buick and GMC business is OK. The new models of GMC trucks (Suburban and Yukon) have been in short supply, and that has hurt. But I'd rather have the plant build fewer trucks as long as the quality stays high. Nissan is the tough one right now."

Dave Conant, general manager of Norm Reeves Honda Superstore in Cerritos, Calif., is optimistic but doesn't see a break-loose recovery. "I'm seeing more lookers and buyers," Conant said. "The California recovery is going to lag behind the rest of the country."

At Toyota Motor Sales U.S.A. Inc., Art Garner, spokesman for Lexus Division, said there has been a surge in demand. "The biggest thing we're hearing from dealers is that buyers are suddenly a lot more serious — less lookers and more buyers."

And Executive Vice President Robert McCurry offered "guarded optimism" for the economy. He noted positive movement in housing and factory orders for durable goods.

But at Mazda Motor of America Inc., Sales Vice President Duke Hale said dealer order comparisons must be tempered by year-to-year analysis: "You have to look, in all cases, at what's being compared. A lot of our competition wasn't aggressive at all last year in the first quarter during the war. For them, it won't be hard to be up a lot over last year.

"But for us, we had a good first quarter last year compared to 1990, so if we're up over that, we're pleased. I'm hearing encouraging things from people in almost every region. This is especially noteworthy in the Northeast, which we all know has been hit the hardest."

EUROPEANS PREPARE

European luxury makes, which depend on the Northeast, expect a recovery. BMW, Jaguar and Mercedes-Benz all reported that orders are up as dealers build inventory for spring. Volvo Cars of North America believes a recovery is further away.

"There are a number of things fundamentally wrong with the economy," said Volvo spokesman Robert Austin.

BMW of North America Inc. expects its dealers to sell 16,000 cars in the second quarter compared with 13,000 last year, said spokesman Thomas McGurn, due in part to anticipated interest in the new 325i and the 318i.

Don Hicks, owner of Shortline Subaru-Hyundai-Suzuki in Aurora, Colo., said, "I'm very optimistic that sales in our area are going to get stronger still."

Wayne Williams, owner of Williams Auto World (VW-Audi-Subaru-Porsche-Mercedes-BMW) in Lansing, Mich., said he is very optimistic. He said the average time between initial consumer contact and actual purchase is about 10 days compared to the six or seven weeks last fall.

"We normally carry one or two VW Cabriolet convertibles, but I just bought five more for a total of seven," said Williams. "We're trying to get as many new and used Porsches as we can. When consumers make the decision to buy they want it now." AN

Managing Editor Edward Lapham wrote this story. It was reported by Staff Reporters Kristine Stiven Breese, Mary Connelly, Phil Frame, Jim Henry, Kathy Jackson and Arlena Sawyers.

BMW would find supplier pals in S. Carolina

LINDSAY CHAPPELL

Staff Reporter

If BMW AG wants to set up a North American assembly plant somewhere away from the influence of Japanese transplants, it's a little late.

The remote South Carolina town it is eyeing already has two Japanese parts ventures. And 14 other Japanese parts firms are operating within 100 miles of the site, employing at least 3,300.

The Anderson area, with a population of 140,000 in the northeast corner of South Carolina, has emerged as the leading contender for a BMW assembly plant.

The town is halfway between Atlanta and Charlotte, N.C., each 100 miles away on Interstate 85. The drive to Atlanta connects Anderson to Interstate 75, a Midwestern jugular that links scores of Japanese transplant factories with Detroit. The list includes Toyota Motor Manufacturing U.S.A. in Georgetown, Ky.

Other suppliers are nearby.

Michelin Corp., the French tiremaker and BMW supplier, has its North American headquarters 40 miles away in Greenville, S.C.

Conveniently, three of the nearby Japanese-affiliated suppliers are joint ventures with traditional BMW suppliers — Germany-based Robert M. Bosch Co. and Carl Freudenberg Co.

Bosch is a 50-percent partner with Nippondenso Ltd. in Anderson's Associated Fuel Pump Systems Corp.

Bosch is a 51 percent partner with Japan Electronic Control Systems Co. in Automotive Electronic Control Systems Inc., also in Anderson.

Freudenberg and its partner in the United States, Japanese-based NOK Corp., operate one of their joint-venture seal plants across the state line in Cleveland, Ga.

A fourth plant in the area, British-based Lucas Industries in Greenville, exports fuel injectors to BMW in Munich.

The potential German transplant would have immediate access to 170 traditional European supplier plants in the United States, points out Henry P. Allessio, partner with Easton Consultants Inc. in Hopkinton, Mass., who tracks the automotive supplier industry.

"There are enough German suppliers operating over here to give them a good start," he says. ■

BMW

Maker sees savings from U.S. plant

continued from PAGE 1

plant site in the United States has been narrowed to four from 215, "with only South Carolina mentioned specifically."

The Munich-based carmaker late last week confirmed the essence of the Thoms memo, but said no decision is likely to be made until mid-to-late May.

According to Thoms, Von Kuenheim said that BMW plans to "build a specific model in the U.S. and would not duplicate production in Bavaria."

Company sources confirmed last week that either a new entry-level car based on the 3 series or even a 3-series convertible or station wagon could be built outside Germany.

Because of the popularity of the new 3 series, BMW's plants in Germany are reaching capacity, the company said. The 3-series convertible has been approved for production and a go-ahead on the station wagon is expected.

The logic of a U.S. move stems from BMW's need to be present in a "dollar area" to make itself less vulnerable to currency fluctuations, company sources said last week. The company sold 53,343 cars in the United States last year, roughly 10 percent of its total production.

BMW prefers the United States over Mexico or Canada, the source said.

According to the Thoms memo, BMW does not want to locate in a state where the Japanese currently have production facilities, eliminiating Ohio, Kentucky, Illinois, Indiana, Tennessee and California.

"Another important condition is the proximity of a good international airport providing timely connections to Europe," the memo said. "Also, a good rail transportation system to a major port for shipping the cars is important."

Finally, "The BMW chairman said the availability of non-unionized workers was strongly preferred by his company."

Von Kuenheim has frequently complained that high wages in Germany, one of the most expensive countries in Europe, undermines the company's competitiveness. According to BMW, its workers are paid an average of $26.07 an hour, including social costs. Employees work 37 hours a week and receive six weeks of vacation a year.

In comparison, according to BMW, U.S. autoworkers earn an average $20.76 per hour — including social costs — work 40 hours per week and receive four weeks of vacation a year.

BMW is concerned with the "high hourly wages, work limitations, environmental restrictions, etc., that are a part of doing business in Germany," Thoms says.

According to Thoms, he was told by von Kuenheim that a U.S.-produced car would be sold in the United States and exported. The cars would be transported aboard the same ships that bring new BMWs to the United States, von Kuenheim is quoted as saying.

While BMW's search for a plantsite went as far west as Omaha, Neb., BMW does not want a plant more than seven times zones away from Germany "so that the managers would be able to talk to one another at reasonable hours," the memo says.

In his memo, Thoms tells the Bonn embassy he is certain BMW will decide to build a plant in the United States. ■

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

FORD MOTOR CO.	
1992 models	
April 1 to June 30. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Some rebates vary by regions.	
Ford Probe	$1,500
Thunderbird Sport, SC (Calif. only)	$1,500
Taurus SHO	$1,000
Other Taurus, Mustang	$500-1,000
Escort	$500-750
Thunderbird, Tempo, Crown Victoria, Festiva	$500
Ford Bronco, Econoline (RV)	$1,000
Ranger	$750-1,000
Aerostar	$500-1,000
F series	$400
Lincoln (all)	$1,500
Mercury Sable	$500-1,000
Capri	$750
Tracer	$500-750
Topaz, Cougar, Grand Marquis	$500
1991 models	
April 1 to June 30. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Some rebates vary by regions.	
Ford Thunderbird, Probe	$1,500
Mustang	$1,000-1,500
Festiva	$1,000
Escort	$750
Taurus SHO	$600-1,000
Other Taurus	$400-1,000
Tempo	$400
Ford Bronco, Econoline E150 RV	$1,000
Aerostar	$400-1,000
Ranger, F series, other Econoline	$400
Mercury Capri	$2,000
Sable, Cougar	$1,500
Tracer	$750
Topaz	$400
CONTINUING PROGRAMS	
CHRYSLER CORP.	
Expires March 31. Finance rates in lieu of rebates from zero to 9.9 percent.	
1991-92 models	
Chrysler New Yorker Fifth Ave., Imperial	$1,500
N.Y. Salon, LeBaron sedan	$1,000
LeBaron coupe, conv.	$500
Dodge Monaco	$1,500
Shadow, Spirit	$1,000
Daytona, Colt 3-dr.	$500
Dodge Ramcharger	$2,000
Ram wagon (van and conversion)	$1,000
Ram pickup (gas), Dakota pickup	$750
Ram 50 pickup	$500
Eagle Premier	$1,500
Talon	$1,000
Summit 3-dr., 4-dr., '92 wagon	$500
Jeep Cherokee	$1,500
Comanche	$750
Wrangler	$500
Plymouth Sundance, Acclaim, Laser	$1,000
Colt 3-dr., '92 Vista	$500
All minivans	$500
Northeast region only: LeBaron sedan, Acclaim, Spirit	$1,500
GENERAL MOTORS	
1992 models	
Expires June 4, unless otherwise indicated. In lieu of rebates, finance rates of 2.9 to 6.9 percent are offered.	
Buick (based on option package ordered)	
Riviera	$2,000
Skylark, Century, Regal, LeSabre	$250-1,000
Cadillac (expires March 31)	
DeVille, Fleetwood, Brougham	$1,500
Chevrolet Lumina; Geo Storm, Prizm, Metro (manual)	$750
Cavalier, Camaro	$500
Geo Metro (automatic)	$300
Chevrolet S/T Blazer	$1,000
S/T pickup, Lumina APV	$750
G van	$500-750
C/K pickup	$400
GMC S15 Jimmy (exc. Typhoon)	$1,000
Sonoma (exc. Syclone)	$750
Sierra (regular cab)	$400
GMC (expires March 31)	
G van	$500-1,000
Safari	$500
Oldsmobile (regional)	
Toronado, Silhouette, Bravada	$1,000-2,000
Custom Cruiser	$1,000-1,500
Cutlass Ciera	$1,000
Cutlass Supreme	$750-1,500
Ninety Eight, Eighty Eight	$500-1,250
Pontiac Grand Prix, Trans Sport	$750
Sunbird, Grand Am, Firebird, Bonneville	$500
1991 models	
Expires May 4, unless otherwise indicated. In lieu of rebates, finance rates of 2.9 to 6.9 percent are offered.	
Buick (based on option package ordered)	
Reatta	$2,000
(other rebates same as 1992 models)	
Chevrolet (same as 1992 models, cars and trucks)	
GMC (expires March 31)	
G van	$500-1,000
Safari	$400
Other GMC (expires May 4)	
Same as 1992 rebates on S15 Jimmy, Sonoma, Sierra	
Oldsmobile (regional)	
Cutlass Calais	$700-1,000
(other rebates same as 1992 models)	
Pontiac (same as 1992 models)	
HYUNDAI (expires April 2)	
Excel (1991)	$1,000
Excel (1992)	$500
Elantra (1992)	$1,000
Scoupe (1991)	$750
Scoupe (1992)	$500
Sonata (1991)	$1,500
Sonata (1992)	$750
MAZDA (1992 models, expires April 6)	
Protege, 626, MX-6	$1,000 plus free air conditioning or automatic trans.
Pickups	$400-1,200
MITSUBISHI (expires April 30)	
Eclipse (1991-92, national) 5.9 to 8.9 percent loans, based on down payment	
Pickups (1990-92, Southwest region)	$1,000
Mirage (1990-92, Southwest region)	$500
SUBARU (expires April 2)	
Loyale (1991-92)	$500
Legacy (1992)	$500

New Ford rebates run to June 30

ARLENA SAWYERS

Staff Reporter

Ford Motor Co. announced a customer rebate program that runs from April 1 through June 30. Payments range from $400 to $2,000 on 1992 and 1991 cars and from $400 to $1,000 on trucks.

Finance rates of 2.9 to 7.9 percent are also available.

The program is largely regional and is most generous for California residents.

For instance, the 49-state rebate on 1992 Thunderbirds and Cougars is $500. In California, it is $1,500 on the 1992 Thunderbird Sport and Super Coupe and Cougar XR7.

Other 1992 Thunderbirds and Cougars carry no rebates in California, although Ford has a cut-price deal on the T-bird LX. ■

Ford wants redo of Japan-based dealer channel

RICHARD JOHNSON

Staff Reporter

TOKYO — Ford Motor Co. and Mazda Motor Corp. are negotiating to restructure the Autorama dealer network through which Fords are sold in Japan.

Ford owns 34 percent of Autorama, Mazda owns 39 percent and nine other companies own 27 percent. The network sells more than 80,000 Ford-badged cars and trucks per year, although the lion's share is built by Mazda in Japan.

Ford bought its stake in Autorama in 1989. Last year, it named former Toyota Motor Corp. executive Konen Suzuki president of Ford of Japan to recharge the company's sales efforts here.

Suzuki has focused on trying to upgrade Autorama, which he described in an interview last week as "a nightmare for me."

"Autorama is far behind the ideal situation for a dealership at the distributor level and at the factory level," he said. "We are just starting to correct it. It can't be accomplished in six months; it will take several years."

The channel has 115 dealers and 340 sales outlets. Suzuki said the total must rise, but he said his first priority is to raise the standards of existing dealers.

Autorama is "far behind" industry service standards, he said. "And everyone contributed to the problem — the dealers, the distributor, Mazda, everyone."

He said service and repair is "only one example, although a big one. This is very, very important, especially for imported cars."

Suzuki would not comment on whether the equity relationship among the partners might change, but said he expects to see more cooperation. He said Ford plans no large-scale marketing effort in Japan until the Autorama matter is resolved.

Ford sold 1,600 imported vehicles through Autorama last year, down sharply from 1990. When sales of seven Ford dealers are added, volume was just under 3,000 units. This year, Suzuki expects to sell about 5,000, including 3,500 through Autorama.

Still, he regards the total as "nothing," and said his job is to set a foundation for the future.

Suzuki said Ford eventually hopes to achieve 5 percent of the Japanese market, with imports accounting for about half of that.

Car build for year tops '91

ANNE E. WRIGHT

Chief Statistician

Last week's estimated car production in the United States was the highest so far in 1992. And year-to-date, U.S. car production leads 1991 for the first time. The margin is 0.4 percent.

Last week's estimated U.S. car production was 120,435, up 10.5 percent from the prior week and 27.2 percent over the year-ago week, which included the Good Friday holiday.

Year-to-date, U.S. car production is 1,311,066.

Canadian car production last week was estimated at 26,265, up 0.6 percent from the prior week and 21.3 from the year-ago week.

So far in 1992, Canadian makers have produced 227,497 cars, down 5.6 percent from 1991.

U.S. truck production was estimated at 89,243 last week. That was a decrease of 1.3 percent from the prior week but an increase of 44.8 percent over the same week last year.

U.S. truckmakers have assembled 908,650 vehicles so far this year, an increase of 31.8 percent from the same period one year ago.

Canadian truckmakers' estimated production last week was 22,647, down 1.3 percent from the prior week but up 47.5 percent from the year-ago week.

Year-to-date, truck production in Canada is 279,746 an increase of 51.6 percent over 1991.

Last week's estimated daily build rate was 51,718 cars and light trucks in the United States and Canada, the most productive week so far in 1992.

Daily production was up 4.1 percent from the prior week and 7.0 percent from the year-ago four-day holiday week.

General Motors' Detroit-Hamtramck, Mich., facility ran overtime on the Buick Riviera, Cadillac Eldorado, Cadillac Seville, and Oldsmobile Toronado lines.

Work at GM's Wentzville, Mo., car plant has been reduced to one shift this week to adjust inventory in the field.

The postal line at GM's Moraine, Ohio, plant worked one shift of overtime last Saturday. The company's Janesville, Wis., truck plant worked two shifts of overtime last Friday.

In Canada, GM's Scarborough, Ontario, and Osahawa, Ontario, truck plants worked overtime last Saturday.

Ford Motor Co.'s Kansas City, Mo., and Louisville, Ky., truck plants and the St. Thomas, Ontario, car plant worked daily overtime last week.

The Louisville facility has worked the maximum hours of overtime permitted by the UAW contract permits since February 1990.

The overtime has been ordered to maximize output of the Ford Explorer.

Ford's Wayne, Mich., car facility will be idle this week for model changeover. The plant produces the Ford Escort.

Japanese car hike is $441

10 makes boost stickers in March; Big 3 don't

JOHN K. TEAHEN JR.
Senior Editor

The spring round of price increases on Japanese cars in the United States resulted in an average hike of $441, or 2.8 percent, an *Automotive News* analysis discloses.

Ten of the 12 Japanese makes have raised prices since March 1, with the boosts ranging from $100 for American Suzuki Motor Corp. to $1,790 for Lexus Division of Toyota Motor Sales U.S.A. Inc. Only American Isuzu Motors Inc. and Daihatsu America Inc. did not raise car prices last month.

The increases apply to cars built by Japanese transplants in the United States as well as to vehicles imported from Japan. All increases mentioned in this article are sales-weighted.

The March boosts followed President Bush's visit to Japan in January. He was accompanied by the chairmen of General Motors, Ford Motor Co. and Chrysler Corp.

Shortly after that visit, *Automotive News* reported that the presidents of Toyota Motor Corp. and Nissan Motor Co. Ltd., Japan's two biggest automakers, were considering hiking prices in the United States. The move was viewed as an effort to ease trade friction between the two nations as well as a way to shore up the Japanese firms' flagging — or nonexistent — profits in this country.

news

Sales up 2.3%; trucks lead way

Sales of new cars and light trucks rose 2.3 percent in March, marking the third consecutive monthly increase of 1992. The March gain pushed the *Automotive News* Seasonally Adjusted Annual Rate to 12.3 million, 3.4 percent above 11.9 million for three months last year.

March sales totaled 1,109,743, compared to 1,084,807 last year.

Trucks did the job in March with a gain of 9.9 percent over last year. Cars were down 1.4 percent.

But retail sales of cars appeared to be gaining strength. James Fitzpatrick, vice president of the General Motors communications and marketing staff, cited a "continuing strong retail performance" for GM.

Each of the Big 3 reported a sales gain over last year's weak performances. Sales of Japanese cars and trucks dropped 5.6 percent.

The March sales table is on Page 41.

Camry wagons start at $16,898

TORRANCE, Calif. — Prices of the recently introduced Toyota Camry station wagons start at $16,898 for the Deluxe four-cylinder model, Toyota Motor Sales U.S.A. Inc. said last week. An LE 4 wagon is $18,798 and an LE V-6 is $20,528.

Automatic transmission and

A vote for experience

Chrysler Corp. dedicated its $1 billion Jefferson North assembly plant in Detroit last week and made it a symbol of inner-city America and opportunity for minorities. Chairman Lee Iacocca, right, talking with UAW President Owen Bieber, said the plant may be urban America's last chance for success with the auto industry. Workers there average 51 years of age and 26 years of experience. Bieber said the plant should become the symbol of what can be achieved if the U.S. government aids the domestic auto industry. Piech's job: cut costs, keep gains by Hahn

Choice pleases some VW critics

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Ferdinand Piech, the Audi AG chairman who will likely be named Volkswagen AG's next chairman this week, will have to carry out his predecessor's global expansion plan while honing VW for tougher competition in Europe.

Piech is expected to get nod this Friday

Piech, who will be 55 on April 17, has been tapped by a VW supervisory board committee to succeed Carl Hahn next Jan. 1. As the selection was made, VW set the tone for Piech's tenure by confirming plans to cut 12,500 blue-collar jobs in Germany during the next five years.

Yoshino could replace Irimajiri in Honda troika

RICHARD JOHNSON
Staff Reporter

TOKYO — Honda Motor Co. Ltd. will decide by the end of April on a new top management format that is likely to result in Hiroyuki Yoshino returning from Ohio to replace product and manufacturing chieftain Shoichiro Irimajiri.

Honda's executive team was thrown into disarray with the March 18 resignation of Irimajiri for health reasons. President Nobuhiko Kawamoto and other company officials are immersed in the job of revamping the leadership tier, say company insiders. Company sources say changes will be announced in May.

A revised structure is likely to emerge, although it could be another troika.

Yoshino, now president of Honda of America Manufacturing Inc., could follow his friend and classmate Irimajiri into one more post, standing with Kawamoto and executive vice president Yoshihide Munekuni at the top of Honda.

Hiroyuki Yoshino is a friend and classmate of Shoichiro Irimajiri.

Kawamoto instituted the shared-responsibility troika a year ago to make the

Jeep-Eagle dealers rap new CSI-rebate plan

MARY CONNELLY
Staff Reporter

The Jeep-Eagle National Dealer Council has asked Chrysler Corp. to overhaul a program that pays dealers a monthly cash bonus for reaching sales and customer satisfaction targets. The program began last week.

Chrysler is trying to force dealers to improve their treatment of customers with the new program, dubbed "Dealer Drive for the Gold." Dealers can earn as much as $350 for each unit sold if monthly sales and customer satisfaction targets are met.

But Jeep-Eagle dealers say the plan is inequitable. The Jeep-Eagle National Dealer Council last week asked Chrysler to drop the per-unit reward. The council prefers a lump-sum, sliding-scale payment based on performance.

Chrysler's three national dealer councils have criticized the Dealer Drive for the Gold plan since it was proposed last November. The Jeep-Eagle, Chrysler-Plymouth and Dodge councils want Chrysler to reward high-performing dealerships, but they oppose per-unit incentives, claiming they

New look for Storm/Impulse

Prototypes of a redesigned exterior for the Geo Storm or Isuzu Impulse have been spotted undergoing winter testing. The new look is expected to be ready for the 1994 model year. Interior changes will include dual airbags. This prototype also sports flush-fit headlamps.

latenews

CONTINUED
from PAGE 1

driver-side airbag are standard equipment on all models, and air conditioning is standard on the LE versions.

The prices compare with $18,475 and $20,925 for Honda Accord wagons with automatic transmission, air conditioning and airbag.

The Camry wagons are built by Toyota Motor Manufacturing U.S.A. Inc. in Georgetown, Ky. Toyota plans to begin exporting them to Europe this summer.

Oshawa union OKs overtime

TORONTO — Workers at General Motors' complex in Oshawa, Ontario, have ratified a revised labor pact that allows mandatory overtime when needed to meet production schedules.

In March, Oshawa workers narrowly rejected a proposal to adopt a form of mandatory overtime. Afterward, GM said the vote could jeopardize the plant's future. The complex includes a truck plant and a car plant. The car factory has been mentioned as a possible candidate for closure under GM's downsizing plan.

Last week, 77 percent of the workers voting approved a program that will apply only if GM allocates a new product for Plant 2 beyond 1994. The agreement calls for a 30-day "demonstration period" of the overtime plan. It provides for two nine-hour days per week per shift between Monday and Thursday and a voluntary six-hour shift on Saturdays.

Bob White, president of the Canadian Auto Workers, said: "It's now time for General Motors to end the intolerable uncertainty for these workers, their families and the community."

— Jeremy Sinek

Ford recalls V-8 Mustangs

DEARBORN, Mich. — Ford Motor Co. is recalling about 150,000 1989 to 1991 model Mustangs with 5.0-liter engines for a possible loose connection in a wiring assembly.

The fault may cause the "Check Engine" light to illuminate, which could lead to unnecessary replacement of emission control components.

Ford also announced two recalls for vehicles sold only in California.

About 19,000 1988 and 1989 model Escorts with 1.9-liter engines and manual transmissions may exceed California emission standards. Dealers will replace three exhaust gas recirculation control devices and reset the engine ignition timing.

About 18,000 1988 model Ford Taurus, Mercury Sable and Lincoln Continental cars with 3.8-liter engines built for sale in California are also being checked for excessive emission levels. Dealers will replace the catalyst and the electronic engine control processor, deactivate the thermactor air pump and modify the evaporative emissions control system.

Ford extends engine coverage

DEARBORN, Mich. — Ford Motor Co. is providing owners of about 550,000 of its 1988-91 Ford Taurus, Mercury Sable and Lincoln Continental cars with extended coverage on the engine mounts for six years or 60,000 miles.

These cars, which are equipped with 3.8-liter engines, may experience deterioration of the right front or right rear hydraulic engine mount. If this occurs, the driver would notice a vibrating noise when the transmission is engaged or during acceleration.

'93 Ford Escort ready to roll

WAYNE, Mich. — The first unit of the updated 1993 Ford Escort will come off the line today, two years after an all-new 1991 model was introduced.

Minor changes include a new grille, rear spoiler and rocker panels. The new vehicles will be in dealer showrooms May 21 at the same price as the 1992 models.

Escort sales through March 31 were 58,820 compared to 61,477 a year ago.

Allison Turbine up for sale

DETROIT — General Motors confirmed last week that its Indianapolis-based Allison Gas Turbine Division is among the non-automotive properties that the corporation is trying to sell.

Allison Gas Turbine makes turbine engines and components for aircraft; vehicle, industrial and marine power systems; locomotive parts; and precision bearings and gears. It has been part of GM for 63 years.

While announcing sweeping cutbacks in late December, GM Chairman Robert Stempel said the company also was stepping up its efforts to sell non-automotive properties. Allison Gas Turbine was widely considered to be on the block, although GM didn't confirm that until last week. GM previously disclosed that it wanted to sell its Electro-Motive Division (locomotives) and Allison Transmission Division (heavy-truck automatic transmissions).

Mexico workers OK Ford pact

Workers at Ford Motor Co.'s Cuautitlan, Mexico, engine and assembly plant ratified a new wage package last week.

The deal completes contract negotiations at Ford's three Mexican plants. Contracts were also renegotiated and approved earlier this year at Ford's Chihuahua engine plant and the Hermosillo Escort/Tracer plant.

Details of the Cuautitlan contract were unavailable. A Ford spokesman said the agreement is almost identical to the wage arrangements made in the two other contracts. Those pacts included 15 percent increases, about the rate of inflation.

Cuautitlan employs about 4,500 hourly workers. Last year, the plant built about 115,000 cars and trucks for the Mexican market.

— Lindsay Chappell

briefly

Will he stay or will he go?

Will David Hermann leave **Saab Automobile AB** by the end of 1993? The *Wall Street Journal*, quoting a Swedish newspaper last week, said he would. And it is very possible that Herman, who was entrusted two years ago with putting the 50-50 joint venture with **General Motors** in the black, could reach his mission by the end of next year. But for the record, here's a Swedish journalist's transcript of Herman's meeting with the press, starting with when he was asked if this was a farewell interview. "I hope that I can remain at Saab at least another year," said the president. "I continue to think that I will." Herman was then asked what would happen if GM offered him another job. "I won't get that offer because it doesn't make sense. But if I got that offer or any other I would repeat my desire to remain here."

NOT STOCKING UP — If it could have, **Chrysler Corp.** would have dumped all its **Mitsubishi** stock March 27, says analyst Maryann Keller with Furman-Selz in New York. Two years ago, Chrysler sold a bunch of Mitsubishi at $7.70. This time the same friendly buyers, including some in the Mitsubishi group, paid only $4.70 a share. Why didn't they take the other 50 million at those bargain prices? Bargain or not, they don't seem to have the cash. Japan's stock market — the historic source of capital — is in the dumper. Its Nikkei index has fallen below 20,000, down almost half from the peak.

NEW KICKS — **Nissan Motor Co.** may have problems with its car business, but it runs one of the best soccer teams in Japan. Industry-supported sports teams rival many professional sports outlets in Japan. They are seen as promotional assets for the companies. Players are considered "amateurs" who supposedly work for the companies that sponsor the teams. Nissan's "employee" soccer team won the Emperor's Cup this year and narrowly missed taking the league championship. But now the league has decided it has enough public support to go professional. So Nissan has set up a subsidiary, Nissan Football Club Corp., to manage its professional team. The president and chief executive officer is Kooichi Takagi, a Nissan director. The team will be renamed the Nissan F.C. Yokohama Marinos.

TRUSTY STEED — The automaker-backed Coalition for Vehicle Choice has been saying right along that new fuel economy standards mean smaller, more dangerous, more expensive cars that consumers don't want. The group, headed by Diane Steed, administrator of the National Highway Traffic Safety Administration during the Reagan years, says it now has an antidote to the poisoned surveys that claim consumers want more government fuel economy mandates. The group says a survey scheduled for release today shows fuel economy related price increases of as low as $500 were opposed by 60 percent of the respondents. The poisoned polls find false consumer support because these polls never point out the downside, such as higher prices, reduction in size and performance, and reduced crash protection, the group said.

Steed: poison control

PIECH

Europe and world linked in VW job

continued from PAGE 1

If the full board rubber-stamps the move this Friday, Piech will be in line to inherit a company far different than the one Hahn took over a decade ago.

Under Hahn, VW has shrunk drastically in the United States, but he has earmarked more than $20 billion for new or expanded ventures in Spain, China, Mexico, eastern Germany and Czechoslovakia. By the end of the decade, they will help give VW an additional 1 million units of worldwide capacity annually.

VW now is solidly at the top of the European sales standings. In 1991, VW sold 2.23 million cars in Europe, good for 16.5 percent of the market. The new Golf has a five-month backlog of orders. But VW is also a high-cost producer. Analysts say VW must streamline and cut costs before Europe's limits on Japanese sales expire at the end of the decade.

Hahn, 65, was given a contract in late 1990 that ran until the end of 1993. But on March 28, a four-member supervisory board committee tapped Piech for the job at the end of this year.

The company gave no explanation.

The full supervisory board will vote on the committee's recommendation this Friday. Piech's approval is viewed as formality.

The announcement pushes Piech ahead of Daniel Goeudevert, the board member in charge of the Volkswagen Division, who had been seen as Hahn's successor. The committee picked Goeudevert as deputy chairman.

Goeudevert, a charismatic Frenchman and former Ford of Germany head, has been a strong advocate of environmental causes.

Piech, meanwhile, has added some financial credits to his reputation as a brilliant engineer during his four years as Audi's chairman. He joined Audi from Porsche AG in 1972 and was Audi's vice chairman in charge of research and development before becoming chairman in 1988.

Shortly after taking over, Piech put in place a 13-point cost-cutting program that Audi estimates is saving about $242 million annually. During his tenure, Audi's pre-tax profits as a percentage of sales have increased from 1.3 percent to 6.1 percent.

Piech's appointment will likely appease critics who say that VW has overextended itself under Hahn.

"They were on a highway to nowhere with the cost situation in Germany," said Stephen Reitman, an analyst with UBS Phillips & Drew in London.

Reitman expects VW earnings to decline in the coming years, in part because the company will no longer be permitted to accelerate depreciation on its main plant in Wolfsburg. Prior to German reunification, West German companies with operations near the border of the former East Germany could speed up write-offs as compensation for being in a blighted zone.

"They have put into the job the guy who won't shrink from making difficult decisions on what has to be done with VW," said analyst Carl Ludvigsen of Ludvigsen Associates Ltd. in London.

"Piech knows what he wants and is not worried politically about what may or may not happen — he is secure in life," Ludvigsen said.

Austrian-born Piech is known as a tough, no-nonsense executive with a passion for cars. He is the grandson of Ferdinand Porsche, the developer of the VW Beetle, and Piech's family still controls Porsche AG.

His technical innovations at Audi include the turbocharged, intercooled engine system; the Quattro all-wheel-drive system; and the fully galvanized steel body shell.

Speculation that Piech would replace Hahn has grown stronger in recent months. Audi's strides in engineering have been showcased at this year's auto shows, where the company has stolen the spotlight with new concept cars, including a low-slung aluminum-bodied roadster called the Spyder.

The car is expected to go into production. But that could create a conflict of interest for Piech, whose seat on the Porsche board has not been challenged by VW because the two makers currently don't compete squarely against each other. The Spyder would be VW's first entry onto Porsche turf.

VW said the 12,500 jobs will be cut through attrition and retirements rather than layoffs. Since's VW's normal rate of attrition would easily meet the reduction goal of 2,500 jobs a year, analysts believe that number could be increased.

Several months ago, Goeudevert was also rumored to be the successor to Raymond Levy, who will retire as chairman of Renault this year when he turns 65. Goeudevert told French television recently that he thought Renault would be best run by a company insider.

Piech's forceful management style has VW watchers speculating that he and Goeudevert will clash. "Qualities that make him (Piech) suitable may not foster collegiate management," Reitman said.

VW had a record year in 1991 with worldwide sales of 3.3 million of its VW, Audi, Seat and Skoda vehicles.

But its 1991 earnings were lower than expected. Group profit after taxes was the equivalent of $691 million, up from $654.9 million in 1990.

VW dealers express cautious optimism

CHARLES E. RAMIREZ
Special Correspondent

U.S. Volkswagen dealers seem to support the German automaker's selection of Ferdinand Piech as apparent successor to VW chairman Carl Hahn.

Many dealers interviewed last week were unaware of the decision.

VW's supervisory board designated Piech nine days ago and is expected to make a final decision at its April 10 meeting.

Piech, 54, is currently chairman of VW's Audi luxury car division and could replace Hahn as early as Jan. 1.

"Hahn had a great knowledge of the U.S. market and dealers always felt they had a sympathetic ear with him and an advocate on the board," said Ben Hulsey, a former chairman of the VW national dealer council and owner of Mahan VW in Houston. "He was on our side."

"Unfortunately, that feeling never went too much farther than him," Hulsey said. "Judging by actual practice over the last two or three years, either I've overestimated his influence in the company or underestimated the strength of his staff."

Hulsey said Hahn is a true gentleman with a strong personality whom VW should have used to market its cars like Chrysler used Lee Iacocca.

The dealer said he respected the company's decision and Piech's skill. "The board members think he can do the job and I've got to trust their decision," Hulsey said. "Piech has a great love of and a special feeling for cars. You can see it by looking at the cars he's built for Audi."

Hulsey said although Piech has a great reputation as an engineer, his ability to run the company is a concern because he is not a "consensus builder like Hahn."

Wayne Williams, owner of Williams Auto World in Lansing, Mich., and current Audi dealer council chairman, agrees that Hahn is like Iacocca.

"Hahn is to Europe what Lee Iacocca is to Chrysler," Williams said. "He is a firm believer in global marketing and had a tremendous vision of global expansion.

"Piech is a brilliant engineer and is one of the best minds we have in the automotive world today. He knows cars and he knows how to build them," Williams said, noting that Piech was responsible for Audi's Quattro Drive System.

"If Piech is the successor, some real refreshing things could happen in our business. He is a young man that still has vision and creativity. If he can form the same relationships Hahn had, we could see great things for Volkswagen and Audi," Williams said.

Jack Price, owner of University VW in Albuquerque, N.M., said dealers have always had the utmost respect for Hahn and felt he had a big interest in the U.S. market.

"We've been disappointed with the sales of VW in America. And although the market has substantially deteriorated, he has done an outstanding job worldwide," Price said. "We're expecting five new models within the next 10 months and we're looking for a big rebound."

Vehicles provide little to '91 trade deficit drop

LINDSAY CHAPPELL
Staff Reporter

The recession slashed the overall U.S. trade deficit by 35 percent last year, but the automotive contribution to that improvement was minimal.

The tough sales year in this country meant that fewer cars and trucks were imported, but higher product values from Japan and Canada held the decline in the automotive deficit to only 4.6 percent from 1990.

The average value of vehicles imported from Japan rose $1,006 last year, and the average value of vehicles imported from Canada rose $556.

Also contributing to the dip in the automotive trade imbalance was an increase of $1.6 billion in the value of vehicles exported from this country. A number of U.S. manufacturers, including Japanese transplant factories, increased exports last year.

But the overall effect was modest. While the total U.S. merchandise trade imbalance with the world fell from $101.7 billion in 1990 to $66.2 billion in 1991, the automotive trade imbalance fell only $2 billion — to $40.7 billion.

Japan exported 98,600 fewer passenger vehicles to the United States in 1991 than in 1990. Yet the value of last year's exports was $1.1 billion higher than a year earlier, according to the latest data from the U.S. International Trade Commission.

In 1990, the average value of a Japanese import was $9,774. In 1991, it was $10,780.

The rising value reflects the trend toward larger and more expensive cars from Japan, such as Lexus and Infiniti.

Canadian factories, owned by U.S., Japanese, Korean and Swedish manufacturers, shipped 50,600 fewer passenger vehicles to the United States in 1991. While the value of those shipments rose nearly 1.5 percent, the value of U.S. exports to Canada rose 11.7 percent.

The value of the average Canadian-made import was $12,278 in 1991, up from $11,722 in 1990. While Canada is included in the U.S. trade figures, manufacturers usually don't consider those vehicles as imports because of a free-trade agreement between the countries.

Imports from Mexico continued to climb last year, both in dollar volume and in number. Mexican plants owned by the Big 3 and Volkswagen AG shipped 261,000 vehicles worth $2.8 billion to the United States last year. In 1990, Mexico shipped 234,000 vehicles worth $2.4 billion.

At the same time, the value of vehicles shipped by automakers in Italy, Germany, Sweden and the United Kingdom declined 23 percent last year.

The group's combined decline of $1.95 billion was offset by the $1.8 billion increase in vehicles imported from Japan, Canada and Mexico.

The U.S. vehicle-trade deficit with Japan and Canada combined was $33.4 billion last year, 81.9 percent the total deficit.

PRICES

Japanese stickers up $441 in March

continued from PAGE 1

The trade angle was that higher prices on Japanese cars might make them a bit less attractive to American buyers and give the Big 3 a better shot at the market.

It is too early to assess the effect of higher prices on the sales of Japanese cars. The new stickers took effect at varying times during the month, and March sales do not provide a definitive reading. Most dealers were selling pre-increase cars last month.

From a profit standpoint, the Japanese importers have not given away their added revenue in a rash of higher rebates. Incentives during March were just about the same as they were before the price hikes. Most of them were importer-to-dealer payments.

Some of the incentive programs expired in early April, and no information on revisions or extensions was available last Friday.

So far, the Big 3 have not raised their own prices and thrown away any marketing edge the Japanese hikes may give them. Since March 1, Saturn has posted the only Big 3 increase. It averaged about $175, but it raised the average price of a Big 3 car only $2.49 on a sales-weighted basis.

In raising prices, most of the Japanese importers blamed the strengthening of the yen against the dollar. Richard Recchia, Mitsubishi executive vice president, was the only leader to acknowledge publicly the political aspect.

In late February, he told the International Motor Press Association, "If Mitsubishi raises prices, it will be a combination of everything, politics included. It would be naive to think that politics didn't have some part in it."

A trend beyond the trade issue and currency exchange goes in the same direction. Companies in Japan have been debating the wisdom of repositioning Japanese cars at the high end of the segments in which they compete around the world.

Yutaka Kume, president of Nissan and deputy general director of the Japan Automobile Manufacturers Association, was the first automotive leader to embrace the goals publicly. Last year, Sony Corp. chairman Akio Morita proposed that all Japanese manufacturers consider repositioning their products upward.

Tying a price increase to the change in the yen-dollar relationship is a two-edged sword. At the beginning of the 1992 model year last Oct. 1, shortly after the annual price boost, the yen was trading at 133.20 to the dollar. By early February, when the Japanese were mulling their price hikes, it was 126.25. The gain of 5.5 percent was more than the recent Japanese price increases.

But last Thursday, the yen was listed at 133.72 to the dollar, a bit lower than on Oct. 1. None of the Japanese importers have rescinded or trimmed their March price increases.

Last week brought price action from Subaru of America Inc. and Mazda Motor of America Inc.

Automotive News estimates the Subaru hike averaged $326, or 2.1 percent. Increases were $300 on the Justy, $250 on the Loyale, $350 on the Legacy and $1,250 on the SVX sport coupe.

Mazda's increase is estimated at $732, or 5.1 percent. It was a two-part action that included the pricing of three redesigned lines of cars that will be marketed as 1993 models.

Early in March, Mazda priced the 1993 MX-6 and RX-7 coupes and boosted the sticker on the 929 sedan. Last week, it pinned new labels on the 323 and the Protege and priced the 1993 models in the 626 line.

On a sales-weighted basis, the three new lines accounted for $594 of Mazda's $732 average increase on cars. Additional equipment played a part in the boost; a driver-side airbag is standard on the 1993 MX-6, RX-7 and 626.

Mazda also hiked its MPV minivans $625 to $675. Toyota raised its Previa minivans $1,000 to $1,460. AN

CHRYSLER

Jeep-Eagle council rips CSI-rebate idea

continued from PAGE 1

put some dealers at a competitive disadvantage.

The Chrysler-Plymouth and Dodge councils did not join the Jeep-Eagle group last week in asking the company to start over. Chrysler announced details of the program to its dealers Tuesday.

The program is strictly a cash-to-dealer arrangement. It will not affect the rebates Chrysler offers to customers.

Theodor Cunningham, Chrysler executive vice president of sales and marketing, said Drive for the Gold is needed in today's market.

"The whole world is changing so rapidly, customers are becoming so demanding of satisfaction today that if we are going to be the satisfaction leader, we are going to have to take very dramatic action to get our dealers truly involved," Cunningham said.

"The customer of the '90s is telling us he is going to buy only from those who are very concerned about the customer," he said. "The vast majority of our dealers, 80 percent, do a terrific job with their customers. But some dealers have not adopted modern methods of customer satisfaction. To move that 20 percent, you have to affect their profitability."

DOLLARS AND CENTS

Chrysler has hammered dealers with the message that higher Customer Satisfaction Index ratings result in greater profitability. In whistle-stop tours around the country, E. Thomas Pappert, vice president of sales, has used real-world examples to show that a dealer with higher CSI outperforms financially a weaker dealer in the same market.

"We have been trying to sell this to dealers in dollars and cents," Cunningham said. "We have met with dealers for the last several years and quantified for them in dollars and cents that the dealers with higher CSI have higher grosses, better service business, better repeat business and better customer loyalty."

Drive for the Gold demands that dealers reach both sales and customer satisfaction targets.

"A dealer has a responsibility to us and a responsibility to his customer. We are touching both," Cunningham said.

But dealers who fail to reach 60 percent of a monthly sales objective receive no payment, regardless of their CSI performance. A dealership's monthly sales objective is based on sales during the previous 60 to 90 days.

CSI targets vary by dealership size. Within the size categories, the highest payments are awarded to dealerships reaching CSI rankings of bronze, silver or gold.

For example, Chrysler's largest dealers must achieve a CSI rating of 2.85 on a 4.0 scale for a bronze ranking, 3.0 for a silver ranking and 3.20 for a gold ranking. Medium-sized dealers must achieve 2.95 for bronze, 3.20 for silver and 3.40 for gold.

ALL BUYERS TO BE POLLED

Per-unit payments are scaled to reflect CSI performance. The payments also are scaled within volume rankings.

Chrysler will use a 100 percent statistical base to determine a dealership's CSI. All of a dealership's new-vehicle customers will be surveyed three months after purchase. A second survey will be made at 12 months. The CSI rating will be a three-month average based on the performance in the current month and the two previous months.

All new vehicles a dealership sells or leases at retail will be used in computing the sales objectives.

But not all vehicles are eligible for the monthly per-unit reward. Vehicles covered by any other dealer incentives are out. For example, the Dodge Dynasty and Stealth; the Chrysler Imperial, New Yorker Fifth Avenue and Salon; and the Jeep Cherokee are currently excluded. (See Incentive Watch, Page 46.)

Cunningham said he has a "large" budget for the program but would not say how large.

Chip Duane, chairman of the Jeep-Eagle National Dealer Council, said Chrysler has formed a task force to study the complaints.

"We have asked them to change the program completely," he said. "A CSI reward program should be based on performance over a year's period or perhaps connected to the 5-Star Service Award. It should not be tied to dealer incentives on a per-car basis."

A DIFFERENT BREED

The council also claims it is unfair to force Jeep-Eagle dealers to reach the same CSI targets as Chrysler-Plymouth and Dodge dealers.

Jeep-Eagle overall is 0.08 percent below Chrysler-Plymouth and Dodge in its CSI rating. Within Chrysler's matrix formula, that small percentage is statistically significant and could affect payments to dealers, Duane said.

The Jeep-Eagle council also believes its more upscale customers are more demanding. Jeep-Eagle's CSI targets should vary from those of Chrysler-Plymouth and Dodge to reflect the different expectations, Duane said.

The Jeep-Eagle dealer council also has asked Chrysler to determine whether the regional variations in customers' expectations could affect dealer's performance on the matrix.

"We do support Chrysler for rewarding dealers with high CSI," Duane said. "It takes a lot of effort on the part of the dealer. It's significant that they're trying anything. But we want things on an even playing field."

C-P, DODGE VIEWS

Gus Russo, chairman of the Chrysler-Plymouth National Dealer Council, said the reward program will be successful only if dealers use the money to strengthen the dealership.

"If we use the money to try to beat the guy down the street by giving away the $50 on a car deal, it's a big waste," Russo said.

"Dealers should plow the money back into the store. Buy new service equipment. Hire a better grade of employee. Upgrade the facility. Then this program will work."

Frank Galeana, chairman of the Dodge National Dealer Council, said, "I don't think any dealer across the country would knock the company for trying to bring up CSI. We are trying to take care of the customer."

The reward program is part of a two-pronged effort.

Chrysler also has said it is beginning "a cultural revolution" at its 4,900 dealerships. "Cultural training" programs begin in June, Cunningham said.

Chrysler wants to overhaul the attitudes and atmosphere at its dealerships by using the techniques of customer-oriented companies such as Walt Disney Co. AN

Asia Motors readies minivehicles

OLES GADACZ
Staff Correspondent

SEOUL — Later in April, Asia Motors Co. Ltd. will challenge Daewoo Shipbuilding's uncontested reign in South Korea's growing market for minivans and minitrucks.

Despite a snafu over a name, Asia Motors is pushing forward the introductions of its 800cc pickup trucks and vans. Asia had chosen the name Towner for the line but then discovered the name had been copyrighted. A replacement is being sought.

Asia's new model will be offered in three variations: pickup truck, cargo van and seven-seat passenger van. Prices have yet to be announced, but they will probably be near four million won ($5,300).

Asia Motors, a subsidiary of Ford Motor Co. partner Kia Motors Corp., will continue to leave the minicar segment to Daewoo.

Daewoo Shipbuilding & Heavy Machinery Co. Ltd., the maker of the Tico minicar, Labo minitruck and Damas minivan, has captured 6.1 percent of the entire South Korean market with its line of minivehicles, which were introduced less than a year ago.

Asia's three-cylinder minitruck and minivans are based on Daihatsu's HiJet; the vehicle has a larger engine to meet Korean standards. "Our trim level is higher than Daewoo's," said spokesperson Ahn Suk-Woo.

Redesign work and tooling costs required an investment of $266 million, said Ahn. The project started 30 months ago. Asia hopes to sell 44,400 units by the end of the year, all in Korea.

The vehicles are built at Asia's plant in Kwangju, 180 miles southwest of Seoul. Capacity is 100,000 units.

In an experiment, Asia has recruited 104 independent dealers to reinforce the 70 stores operated by the company.

"Exports are our wish, but there's nothing definite as yet," said Ahn.

Han Jung-Rok, auto equities analyst for the Seoul office of Schroder Securities Co. Ltd., said Asia will have a harder time because Daewoo got to the market first.

"I think the reception will be a lot less favorable than for Daewoo," said Han. "Also, the situation is unfavorable because the economy is cooling down and so is construction activity. Potential demand will be decreasing among major buyers."

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAMS	
CHRYSLER CORP. (1991-92 models; expires June 30)	
Chrysler Imperial, New Yorker Fifth Avenue and Salon	$1,000-2,000, based on number sold
Dodge Dynasty	$1,000-2,000, based on number sold
Stealth	0-$1,000, based on number sold
Jeep Cherokee	$750
VOLVO (1992 models; expires May 31)	
240-GL, 940-GL	$1,000
CONTINUING PROGRAMS	
ACURA (1991 models, expires May 1)	
Legend sedan	$2,500
Legend coupe	$3,000
AUDI (1991 models, no expiration date)	
Audi 100 and 200	$1,500
Audi 90	$1,000
Rebates apply to models purchased by dealer from Audi of America port stocks.	
BMW (no expiration date)	
750iL (1991)	$10,000
CHEVROLET (expires May 4 on 1991 models, June 4 on 1992 models)	
Corvette ZR-1	$2,000
Other Corvette	$1,000
HONDA	
Accord, Prelude (1991, no expiration date)	$500
ISUZU (No expiration date; 1990-92 models unless otherwise noted. Rebates vary by regions.)	
Impulse	$1,300-2,500
Stylus S	$600-800
Stylus S (Calif. only)*	$1,250
Stylus RS	$600-800

Chrysler, Volvo revise programs

ARLENA SAWYERS
Staff Reporter

incentive
WATCH

Chrysler Corp. announced a new round of customer rebates and factory-to-dealer incentives last week, and **Volvo Cars of North America** extended payments to customers on two models.

Chrysler's program runs through June 30; Volvo's expires May 31.

Customer rebates range from $500 to $1,500 on 1991 and 1992 Chrysler, Dodge, Eagle and Plymouth cars and $500 to $2,000 on 1991 and 1992 Dodge trucks and Jeeps. Minivan rebates are $1,000 in California and Hawaii, and $500 in other states.

Dealer rebates on the 1991 and 1992 Chrysler Imperial and New Yorker Salon and Fifth Avenue and 1991 and 1992 Dodge Dynasty are $1,000 to $2,000, based on the number sold. Dodge Stealth sports cars carry dealer rebates of zero to $1,000, based on the number sold.

Dealers earn $750 on each 1991 and 1992 Jeep Cherokee sold.

Consumer rebates on Chrysler vehicles for special classes of buyers include:

- $400 to first-time buyers of 1991 and 1992 Jeep Wrangler, through June 30.
- $500 to college graduates on 1992 and 1993 Chrysler Corp. vehicles except Dodge Viper, through Dec. 31.
- $500 reimbursement to disabled customers for adaptive equipment installed on 1991 and 1992 Chrysler Corp. vehicles and 1993 Jeep Grand Cherokee, through Sept. 30.
- $1,000 matching of suppliers' new-vehicle purchase incentive for employees, through April 30.

Through May 31, Volvo will pay dealers $1,000 on sales of 240-GL sedans and 940-GL sedans. The payments involve only 1992 models and are lower than the rebates of $1,800 and $1,500 that expired March 31. Volvo has dropped dealer rebates on 1991 models.

Special Correspondent Charles E. Ramirez contributed to this report.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS	
CHRYSLER CORP.	
Expires June 30. Finance rates in lieu of rebates are 0 to 9.9 percent.	
1991-92 models

5.9 to 8.9 percent loans, based on down payment	
Pickups (1990-92, Southwest region)	$1,000
Mirage (1990-92, Southwest region)	$500

Daewoo loses $195 million in fiscal '91

OLES GADACZ
Staff Correspondent

SEOUL — Daewoo Motor Co. Ltd. lost 146.7 billion won ($195 million) in 1991, according to an annual financial statement filed with the Securities Supervisory Board.

Sales reached $2.1 billion, for a year-on-year increase of 3.4 percent, the smallest such gain among Korean automakers.

Daewoo, a 50-50 partnership between General Motors and the Daewoo business group, has posted losses for four of the last five years, but a $14.6 million profit in 1990. GM has said it is in the process of "renegotiating its partnership" to reduce its stake in the troubled partnership.

The company was rocked by a major labor dispute last spring that forced a lockout that led to sales losses of over $69 million.

Despite the introduction of the compact Espero, its market share has been on the skids in recent years. Daewoo's share of the market slipped from 11.2 percent in February 1991 to 10.5 percent this February.

According to the Korean Automobile Manufacturers Association, Daewoo's unit sales rose 11.6 percent to 202,647 units last year. They were boosted by a 50 percent increase in exports, to 51,253.

Substantial export sales increases were registered for passenger cars in Canada, Taiwan, Nigeria and Algeria, and for buses in Thailand.

The company opened new markets in South America.

Exports of the Pontiac LeMans to the United States rose by just 4.8 percent, but company earnings were boosted by engine sales to Adam Opel AG.

Tougher mpg, safety, emissions rules expected

JACK KEEBLER
Staff Reporter

Emissions, fuel economy and safety standards will become more restrictive over the next eight years, says the Delphi VI Forecast and Analysis of the U.S. Automotive Industry Through the Year 2000.

The study, published by the Office for the Study of Automotive Transportation at the University of Michigan Transportation Institute, is a detailed analysis of forecasts by three panels of automotive industry executives, directors, managers and engineers expert in the areas of technology, materials and marketing.

The authors claim that the study is not a "crystal ball" of predictions. Rather, it is the well-informed estimates, perspectives and opinions of high-level executives in positions where they can influence trends. Survey topics range from projected fuel costs to safety and emissions regulations.

Automakers oppose bill to put VIN on more parts

MAX GATES
Staff Reporter

WASHINGTON — U.S. automakers oppose provisions of an auto-theft bill that would require them to increase labeling of vehicles and components.

The bill would require that the Vehicle Identification Number be stamped indelibly on every major auto part. Current marking rules for some cars would be extended to all cars as well as light trucks, vans and sport-utilities. The provisions are aimed at thwarting auto thieves and "chop shops" that strip cars and sell parts to legitimate repair shops.

Since 1984, automakers have been required to label the engine, transmission and major body panels on the most frequently stolen cars. The labeling requirements cost automakers $15 million a year, said Thomas Hanna, president of the Motor Vehicle Manufacturers Association.

"There is no evidence that the existing parts-marking requirements are reducing vehicle theft or lowering insurance premiums," Hanna said.

In testimony before a House subcommittee on crime and criminal justice last week, Hanna cited a U.S. Transportation Department study, which concluded that marking cars didn't reduce thefts, didn't increase owners' recovery of stolen cars or car thief conviction rates and didn't reduce insurance premiums.

The bill's sponsor, Rep. Charles Schumer, D-N.Y., contends that increased marking would cut auto theft in half. He says the cost would be made up by reductions in auto insurance premiums.

Hanna supported three other provisions of the Schumer bill. They would:

- Create a nationwide computer network for state motor vehicle bureaus to stop title fraud.
- Empower U.S. Customs inspectors to check cargo ships for stolen cars bound for overseas buyers.
- Toughen federal penalties for auto theft and make "car-jacking," or stealing a car at gunpoint, a federal offense. AN

U.S. cars hike lead over '91

ANNE E. WRIGHT
Chief Statistician

For the second week in a row, U.S. car production leads 1991 for the year-to-date. For the first 2½ months of 1992, truck output was strong, but cars trailed the weak 1991 pace. Now, both cars and trucks are ahead of last year.

U.S. car production was estimated at 115,088 last week, down 1.4 percent from the prior week but up 21.0 percent from the year-ago week. Thus, the manufacturers padded their lead over 1991.

So far this year, U.S. car production is 1,422,419, topping 1991 by 1.7 percent.

Canadian car production last week was estimated at 25,243, down 4.7 percent from the prior week but up 11.9 percent from the same week in 1991.

So far in 1992, Canadian automakers have produced 252,975, down 4.4 percent from 1991.

Last week's U.S. truck production was estimated at 86,483, a decline of 3.0 percent from the prior week but up 28.7 percent from the same week one year ago.

Truckmakers in the United States have assembled 995,038 vehicles this year, an increase of 32.1 percent over 1991.

Canadian truckmakers estimated production at 22,874 last week, down 0.8 percent from the prior week but up 36.2 over last year.

Year-to-date, truck production in Canada is 303,035, up 47.8 percent over last year.

Last week's estimated daily build rate was 49,938 cars and light trucks in the United States and Canada, down 2.2 percent from the prior week but up 23.8 percent from the year-ago week.

General Motors' Arlington, Texas, car plant will be idle until May 5.

The plant is being retooled for production of the 1993 Cadillac Brougham.

GM's Janesville, Wis., truck plant scheduled overtime last Friday — one shift on the medium-duty line and two shifts on the Suburban line.

In Canada, GM's Scarborough, Ontario, and Oshawa, Ontario, truck plants worked overtime last Saturday.

Ford Motor Co. has idled four plants this week: Dearborn, Mich.; Michigan Truck (Wayne, Mich.); Norfolk, Va.; and Ontario Truck (Windsor, Ontario). All four plants have been closed because of slow sales.

Ford scheduled daily overtime last week at the following facilities: Atlanta; Chicago; Lorain, Ohio; Louisville, Ky.; and both the car and truck lines at the Kansas City, Mo., plant. The truck line at Kansas City was also scheduled for Saturday overtime last week.

Chrysler's Windsor, Ontario, truck plant worked overtime last Saturday. The plant produces the Dodge Caravan, Dodge Caravan C/V and the Plymouth Voyager minivans. AN

THE COUP AT GM

Jack Smith told to shape up giant

PHIL FRAME
Staff Reporter

Tired of seeing their company bleed to death, many General Motors executives and managers quietly support the move by outside board members to replace President Lloyd Reuss and Chief Financial Officer Robert O'Connell.

The GM board replaced Reuss with John F. "Jack" Smith Jr. and O'Connell with William Hoglund because it wanted more aggressive managers who would deal swiftly with the company's problems.

The moves shattered Chairman Robert Stempel's hand-picked team of executives installed when he took over in August 1990. Stempel himself lost the chairmanship of the executive committee to board member John Smale, the retired Procter & Gamble Co. chairman who led the board's revolt.

Some GM execs and managers thought the changes were overdue.

"Why not sooner? That's what everybody here thinks," said a mid-level manager at a marketing division. "I think the people here think it's real positive. I don't think the big one who was replaced (Reuss) could make a decision."

Stempel hammered home the need to accelerate reforms at a previously scheduled meeting of GM's top 100 officers, held last Wednesday in Detroit.

JOE WILSSENS/AUTOMOTIVE NEWS

The executive line-up that took power at GM Aug. 1, 1990, was changed last week. From the left, Robert O'Connell LOST the chief financial officer job; William Hoglund WON chief financial officer job; Lloyd Reuss LOST the president's job and his board seat; Chairman Robert Stempel LOST face; Jack Smith WON the president's job; Robert Schultz KEPT his vice chairman job; and F. Alan Smith LOST his seat on the board.

While top executives privately expressed sympathy for Reuss, 55, his internal support collapsed after the announcement of his demotion. Jack Smith, who turned 54 the day the board promoted him, is held in high esteem for turning around GM's international operations. In the past two years, GM made $4.5 billion overseas under Smith while losing $11.7 billion in the United States under Reuss.

Smith established the world's first three-shift car plant, in Spain. He consolidated production at two plants in Belgium. He initiated an innovative scheduling plan and upgraded productivity and quality at GM's operations in the United Kingdom. He also led GM into Eastern Europe.

Smith is known not as a cutter and slasher, but as a pragmatist with sharp perceptions about the way an auto enterprise should run and the ability to act with dispatch.

Smith will be expected to work the same magic now in North America. Smith, who has been with GM for 30 years, reportedly was the board's first choice as president two years ago, before Stempel exerted his influence on Reuss' behalf.

Smale could redo marketing

RAYMOND SERAFIN
Crain News Service

Former Procter & Gamble Co. Chairman John Smale may provide ailing General Motors with a badly needed infusion of customer-focused, market-driven thinking.

Smale is expected to push for aggressive change.

That, at least, is the optimistic assessment of marketers inside and outside GM, in reacting to last week's dramatic executive shakeup. The marketers say that Smale, whose name rhymes with "snail," has a strong marketing record at consumer-product juggernaut Procter & Gamble. Smale's heightened involvement with General Motors could translate into a re-

Citroen to build car in China

PARIS — Automobiles Citroen, a unit of France's Peugeot Group, said it has concluded a $1 billion deal to begin producing its ZX subcompact in the central China province of Hubei.

The project, which is heavily backed by French government guarantees, will begin producing 12,000 units a year from kits at a temporary plant beginning in 1993. Output will increase to 37,500 units a year when an assembly plant is built by 1997, Citroen said. Capacity can be boosted higher, depending on demand, it said.

A plant for engines, gear boxes and suspensions and an aluminum foundry will be located in Xiangran and start production in 1995, Peugeot said.

The project will be a joint venture with Dongfeng Co., China's leading truckmaker, which will hold a 70 percent interest. Citroen will hold 25 percent with two French

Toyota steps past McCurry, Togo era

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES -- Toyota Motor Corp.'s choice of a low-key finance executive to replace U.S. sales boss Robert McCurry sets the stage for a series of changes that will spread power throughout the company.

On June 1, Yale Gieszl, 50, will succeed McCurry, 68, as executive vice president of Toyota Motor Sales U.S.A. Inc.

Shinji Sakai, 55, takes over for Yuki Togo, 67, as president. Togo will become chairman and McCurry vice chairman, but both will no longer have day-to-day duties.

In their eight years together, Togo and McCurry have made Toyota a powerhouse that now sells more than 1 million units annually. But Toyota will give their successors the chance to handpick a new management team.

Gieszl's new title does not specify responsibility for "sales and operations," as McCurry's does. Gieszl, currently senior vice president of finance and administration, has strong business credentials but lacks experience in sales, marketing and dealer relations. That leaves open opportunities for other executives whose skills dovetail with Gieszl's.

Gieszl has a strong finance background.

McCurry left a deep imprint on the company.

"The management group will begin to take shape as Yale (Gieszl) and Shinji (Sakai) make those decisions," said James Olson, vice president of external affairs. "There will probably be more shared responsibilities and a crop of vice presidents and group vice presidents who'll work with Yale, but that hasn't been decided yet."

Some likely candidates for a greater role in leading Toyota are:

- J. Davis Illingworth, 49, group vice president and general manager of Lexus Division.
- George Borst, 44, vice president

Smaller Japanese automakers get larger export allocations

RICHARD JOHNSON
Staff Reporter

TOKYO — Japan's Ministry of International Trade and Industry has moved to the aid of the country's smallest carmakers by increasing their relative share of exports to the United States.

The agency last month cut the industry's voluntary ceiling on passenger-car exports to the United States to 1.65 million units a year, down from 2.3 million. The new ceiling is about 5 percent below actual exports to the United States for the fiscal year ended March 31.

Although the new MITI allocations will not be announced, corporate sources confirmed last week that U.S. shipments by Toyota Motor Corp., Nissan Motor Co., Honda Motor Co., Mazda Motor Corp. and Mitsubishi Motors Corp. will be cut 5 to 7 percent below their actual exports in the just-ended fiscal year.

Under the new plan, Toyota will lose 34,000 potential exports a year (6.6 percent); Nissan, 23,000 (7.1 percent); Honda, 20,000 (5.8 percent); Mazda, 13,000 (6.3 percent); and Mitsubishi, 8,000 (4.9 percent).

In contrast, financially troubled Isuzu Motors Ltd. and Fuji Heavy Industries Ltd., the maker of Subaru, have been given allocations higher than their actual exports. Isuzu's allocation will increase as much as 16,000 units a year (17.0 percent), although the figure wasn't clear, while Subaru will gain 9,000 (17.6 percent). Some of the extra volume granted those

corrections

- A reference to Nissan's growing production in a story April 6 was unclear. In March, Nissan Motor Co. produced its 40 millionth passenger car. The 20 millionth was built in 1975, and the 30 millionth was built in 1986.
- An April 6 headline, "No obvious replacement for Irimajiri," should have said "No obvious replacement for Yoshino."

banks owning the balance.

The venture will be Peugeot's second in China. The company produces 17,000 Peugeots a year at a plant in Guangzhou, located in southern China.

States woo BMW boss

BMW AG's dance card keeps filling up with potential suitors, as the German automaker debates whether to build a plant in the United States.

South Carolina is said to have the inside track for a possible BMW plant, but that hasn't stopped others from trying. Politicians from several states sought out BMW Chairman Eberhard von Kuenheim when he visited Washington last week on previously scheduled business unrelated to the site search. The chairman reportedly turned down meetings not already on his schedule.

South Carolina Gov. Carroll Campbell visited BMW in Munich last month. So did Gov. William Weld of Massachusetts, who pitched the Bay State as a site for a possible BMW plant.

Raymond Howell, Weld's press spokesman, said Weld came away with the impression that BMW already had narrowed the field to sites in other states, but the company didn't say where.

Europe wants Japan cutback

FRANKFURT — The European Community last week asked Japan to cut its vehicle exports to Europe by 100,000 units this year because of declining demand in several key markets, particularly Germany. Japan exported 1.26 million vehicles to the 12-nation European Community last year.

The request, submitted in talks between the European Commission and Japanese officials last week, was referred to Tokyo for study. Japanese negotiators, however, reportedly declined to accept the commission's estimates of lower European vehicle sales this year.

Japan agreed last year on limits for Japanese imports between 1993-1999, but the accord did not include 1992.

— Diana T. Kurylko

Dingell whacks at Japanese

WASHINGTON — Big 3 advocate Rep. John Dingell, D-Mich., last week compared the Japanese to a mule that has to be hit over the head with a two-by-four to get its attention.

And the Gephardt-Riegle trade bill is his lumber, Dingell said at a Congressional hearing. "This is the only tool I've got and I intend to use it as vigorously as possible."

The bill would require Japan to reduce its $43 billion trade surplus with the United States by 20 percent a year or face limits on the number of cars they can sell in the United States.

Chrysler Corp. has endorsed the bill, while Ford Motor Co. and General Motors oppose it. Heads of the National Automobile Dealers Association and the American International Automobile Dealers Association said the U.S. needs to be a tougher negotiator.

— Max Gates

Ford announces emissions recall

DEARBORN, Mich. — Ford Motor Co. is recalling about 212,000 1989 model Ford Thunderbirds and Mercury Cougars equipped with the 3.8-liter V-6 engine to correct an emissions problem.

Ford said that on some cars the fuel vapor hose may not be connected at the fuel tank vapor valve, allowing the vehicle to exceed evaporative emission standards.

Ford also is recalling about 175 1992 model Lincoln Town Cars built as limousines for sale in California to replace the electronic engine control processors. The vehicles were built with the incorrect processor and may exceed exhaust emission standards.

Chrysler recalls Alliance, Encore

HIGHLAND PARK, Mich. — Chrysler Corp. is recalling 380,000 1983 through 1987 Renault Alliance and Encore cars to replace a cooling system component.

The heater core could fail, causing engine coolant to splash inside the vehicle. There have been some reports of minor burns as a result of the component failure.

Renault models will be serviced at Chrysler Corp.'s Jeep-Eagle dealerships. American Motors built the models until 1987.

Power windows spur GM recall

DETROIT — General Motors is recalling 69,000 compact cars in two campaigns to fix accelerator cables and electronic controllers for power windows.

About 39,000 1991 Oldsmobile Cutlass Calais, Buick Skylark and Pontiac Grand Am models with express-down power windows are being recalled because moisture can leak into the electronic controller. Notification letters called the problem "undesirable continuity" — the window may go down by itself and stay down and the electronic controller may overheat and cause a fire in the door panel.

The other recall involves 30,000 1992 Pontiac Sunbirds with the standard 2.0-liter, four-cylinder engine. The accelerator cable may have been kinked during assembly, causing loss of throttle control, cable breakage, or sticking.

— Phil Frame

Reynolds signs deal for Norick

Reynolds and Reynolds Co. has signed a letter of intent to acquire Norick Brothers Inc., an Oklahoma City-based business forms manufacturer, for an undisclosed amount.

"Both Reynolds and Norick have provided automobile dealers with paper-based information management systems for over 80 years," said David Holmes, Reynolds' chairman and president.

The companies expect the acquisition to be completed in June. Reynolds and Reynolds reported fiscal 1991 sales of $599.3 million. Norick, a privately held company, had fiscal 1991 sales of $33.8 million.

Reynolds and Reynolds, headquartered in Dayton, Ohio, is a major supplier of information processing systems.

Norick Brothers Inc. is a manufacturer of business forms for the automotive, heavy equipment and insurance industries.

— Charles M. Thomas

briefly

Will dealers take coupons?

Now that Procter & Gamble veteran John Smale has greater influence at **General Motors,** some Detroiters are wondering when there will be marketing deals like two-fers and products like the "new, improved Pontiac Grand Prix," or "giant, family sized Chevrolet Caprice." Will GM start sponsoring the afternoon soap operas? Are coupons far off?

BUT IS IT SAFE TO GO BACK? Tuesday, the day after **GM's** management shakeup, Donald Runkle, vice president in charge of advanced engineering, spoke at a Detroit luncheon. He said, "I want to thank you guys for inviting me. It's a good day to get out of the office. It's dangerous around there."

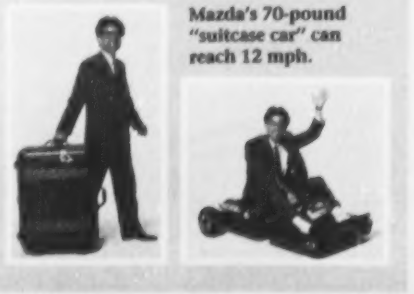
DID HE OR DIDN'T HE? Did **Chrysler Corp.** Chairman-designate Robert Eaton have a crystal ball and suspect a shakeup at **GM?** Could that be a reason he jumped ship? "I found out about it (the shakeup) on the radio on the way to work last Tuesday, just like everybody else," said Eaton last week.

THE AMERICAN WAY — Matt Darcy, the salesman fired by Gordon Stewart of Gordon Chevrolet in Garden City, Mich., is suing his former employer for $10,000 for lost wages and mental and emotional distress. Darcy was allegedly fired for remarks he made on "60 Minutes." Darcy told the interviewer: "If America makes a good product, buy it. If they don't, I buy what's good for my money."

A PAGE OF HISTORY TURNS — Dust settled on Detroit's west side at the site of one of the former **DeSoto** plants last week. The factory has been demolished and with it memories of the days when **Chrysler Corp.** had DeSoto, **Dodge, Chrysler** and **Plymouth** lines. DeSoto, which had 1,500 exclusive dealers in 1929, one year after introduction, was credited with helping Chrysler in 1936 move to the No. 2 slot among the Big 3. The last U.S. DeSoto was built in November 1960.

REGAL TIES — Dust off your tiaras, girls. It may be hip to be a beauty queen again, if new campaigns for Diet Coke and **Buick** are any indication. Coca-Cola Co. has a 30-second TV spot starring Miss Universe. And Buick dealers are enlisting Miss U.S.A. for a regional Skylark campaign, reports *Advertising Age.* The deals are music to the ears of pageant organizers, who admit advertisers have shied away from beauty queens.

PACK YOUR CAR — **Mazda** will display a "suitcase car" at this week's New York auto show. The 70-pound concept vehicle opens like a standard piece of luggage to provide a "Go-Kart-like" driving position. Assembly time for the bag buggy is one minute. Power is provided by an air-cooled two-stroke engine; top speed is 12 mph.



Mazda's 70-pound "suitcase car" can reach 12 mph.

Ford hikes auction-car fee

KATHY JACKSON
Staff Reporter

The factory says it needs more money to support local dealer advertising associations, but many dealers think they're being squeezed.

That is the reaction to an April 3 memo to Ford and Lincoln-Mercury dealers that said the buyer fees charged at the company's closed auctions will change to 1 percent of the selling price, effective April 20.

Most of the vehicles purchased at the closed auctions are the nearly new vehicles used by Ford's management or that the automaker repurchased from rental car companies.

Dealers now pay a $75 fee for each Ford and Mercury vehicle they purchase at auction; the current fee is $125 for Lincoln cars.

The memo from Ford Division General Manager Ross Roberts and L-M General Manager Lee Miskowski said the increase will amount to an average $24 for Ford and Mercury vehicles and $69 per Lincoln.

On Ford and Mercury models, an average fee of $99 would mean an average purchase price of $9,900.

The memo said the money primarily will support local Ford and L-M ad associations, which buy joint advertising for all dealers in a certain geographic area.

The company also generates money for the local associations by assessing the dealers a 1 percent fee based on the sticker price for each new vehicle ordered from the factory for retail sales. Fleet vehicles purchased by dealers are exempt from that fee.

Still, dealers are hot.

"I know that most of the dealers are not happy with this," said Ed D'Amico, president of D'Amico Lincoln-Mercury Inc. in East Brunswick, N.J., and chairman of the Lincoln-Mercury Dealer Council.

D'Amico explained that fewer cars have been going through the auctions since the automaker changed its policy last spring. Rental cars now must be in service for at least six months or 15,000 miles, compared with four months and no minimum miles under the former program. Consequently, advertising contributions are down.

"I know a lot of the dealers don't buy that," D'Amico said, "and I don't like to see the factory transferring costs to dealers either, but sometimes it has to be done."

Dealers are angry.

Ford dealer Bill Jenkins said Taurus models go for an average $13,500 at auction, which means his new fee will be $135 compared with the current $75.

"What they're doing is trying to gouge you every place they can," he said.

Jenkins, who owns Don Jenkins and Sons Ford in Fuquay Varina, N.C., said Ford dealer profit levels have been up nationally this year. He thinks the factory is looking at those profits and saying, 'Hey! Let's get some of that.'

"I'm just disgusted with Ford," Jenkins said.

D'Amico said one of the biggest dealer misconceptions is that the money goes for non-advertising purposes. "The 1 percent has been a thorn in their sides," D'Amico said, "especially with luxury cars because that can amount to a lot of money." D'Amico said advertising costs rise about 10 percent annually so the additional funds are needed.

But Ford dealer Clark Spikes wonders: "Why don't they ever raise warranty and labor rates to the dealers to account for inflation?"

Spikes, owner of Spikes Motor Co. Inc. in Mission, Texas, said the increased buyer's fee "is just another encroachment by the manufacturer on the dealer."

Stephen Lyons, general marketing manager for L-M, said the company went to a percentage formula on auction cars because it is easier than readjusting amounts to account for inflation.

Last August, the company implemented a set 1 percent fee for new cars ordered from the factory for retail sales.

Lyons said additional revenue has increased Lincoln-Mercury advertising volume 20 percent and "more ads help sales."

Salespersons begin NADA certification

CHARLES M. THOMAS
Staff Reporter

CLEVELAND

When area car salespersons were asked what they should charge a long-time customer for a car even though there were 30 of the vehicles on the lot, one answered quickly: "A thousand dollars over MSRP."

Car salespersons have the legal aspects of selling down pat. But some of them have a long way to go in recognizing the varying shades of gray in their ethical practices.

For them, the money grab is far more important than customer satisfaction and building customer retention. It is a dilemma the National Automobile Dealers Association hopes to resolve through its recently launched sales certification program.

But if the first session on ethics and state laws regarding selling cars held last week in Cleveland is any indication, then the battle is uphill and the program long overdue.

Some of the 30 pupils enrolled used the session as a forum to voice festering grievances about their pay and working conditions.

According to NADA, the average compensation for sales personnel is just $22,000. Salespersons also complain their hours are long and benefits few.

More than 200 Cleveland salespersons have enrolled in the certification program. Some said dealers ordered them to attend, while others genuinely are seeking certification.

"I want to better myself and to see if I can improve my image and my income," said Cal Huebner, who has been a salesman for seven years at Dowd Transportation Center, an Oldsmobile-Mercedes-Toyota dealership.

Huebner is not the garden-variety car salesman. A retired police captain, he works part time at the dealership making $25,000 to $30,000 annually.

9.8% gain in truck sales boosts first quarter results

FIRST QUARTER SALES

An increase in car sales to individuals and non-rental fleets overcame ebbing Big 3 sales of program cars in the first quarter, and truck sales rose sharply to carry the market to a 4.1 percent gain.

Car buyers continue to switch to trucks. Sales of minivans and sport-utilities led a truck surge of 9.8 percent in the quarter, while cars barely eked out a 1.3 percent gain.

Another long-term trend seems to have faltered: Japanese nameplates are no longer inching up in market share for the total vehicle market. The Japanese first-quarter share fell 0.5 points, and the Big 3 gained 0.8 points.

Automotive analyst Maryann Keller, speaking at the Economic Club of Detroit last week, said the bubble has burst for the Japanese industry, and it may be forced to trade market share for profits in the next few years (see Page 6).

While manufacturers do not release fleet sales figures, the companies have been indicating all quarter that sales to rental companies — which are usually characterized as money-losing — are below last year's levels.

If there is a "Buy American" trend, it is manifesting itself most obviously in truck sales, where the Big 3 moved from 82.5 to 85.3 percent of the market.

Minivans from Chrysler Corp. and Ford were up more than 10 percent.

The Jeep nameplate was up 52 percent.

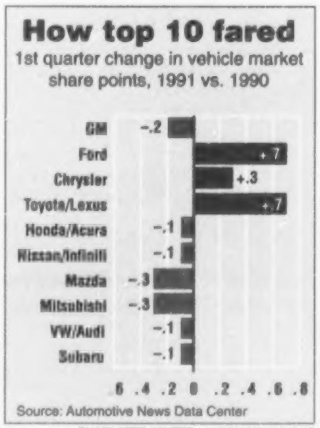
Truck sales by Japanese companies were down 7.2 percent, although Toyota bucked the trend, thanks to 5,644 pickups built on its new line at New United Motor Manufacturing Inc. in California.

Although Chevrolet's C/K pickup was the market leader, S10 sales fell.

General Motors has Saturn to thank for keeping it afloat in market share.

Saturn sold 33,118 more units this year than last, and the rest of GM was up just 842 units.

— *William R. Diem*



CHARLOTTE WINTER / AUTOMOTIVE NEWS

Chrysler

Strong sales of minivans, Jeeps and Dodge Dakota pickups offset a sharp drop in car sales, giving Chrysler Corp. a 6.3 percent sales gain in the first quarter.

The car sales decline reflected Chrysler's decision to reduce its vehicle fleet sales in favor of higher-margin retail sales. Retail sales rose "significantly" in the quarter, the company said.

"We could have looked good by pumping cars into the rental fleets, but chose not to do that," Chrysler Chairman Lee Iacocca said earlier this month.

Sales of the company's mainstream sedans formerly sold into rental fleets were down significantly: Plymouth Acclaim sales dropped 41.2 percent, Dodge Spirit was off 43.1 percent, and Dodge Dynasty fell 30.1 percent.

But there was one hot spot for cars. Sales of the heavily incentivized Plymouth Sundance subcompact rose 62.7 percent in the first three months of the year, while

New GM Europe President Louis Hughes is a hands-on manager.

Hughes will lead GM Europe by 'doing'

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Louis Hughes, named last week to succeed Robert Eaton as president of General Motors Europe, isn't packing his bags yet for a move to headquarters in Zurich, Switzerland.

All this week, the 43-year-old chairman of GM's Adam Opel AG division will be sitting alongside new employees in a classroom in the automaker's new factory in Eisenach, Germany, taking an orientation course on lean production methods.

"You can't preach; you've got to do," Hughes said in a telephone interview last week, explaining the management philosophy that has marked his success at Opel.

Hughes, who has headed Opel since April 1989, oversees a company with 56,000 employees and $14.2 billion in annual revenue. The unit accounts for 45 percent of GM's sales in Europe.

The Eisenach plant, GM's biggest project in the East, is largely a Hughes creation. And it's a sign of where the company wants to be in Europe.

The Eisenach plant will incorporate lean-production methods learned from GM's joint-venture partners at plants in Canada with Suzuki Motor Corp. and in California with Toyota Motor Corp.

While many of Opel's projects were underway long before his arrival in 1989, Hughes has been the biggest proponent of making the new plant GM's cutting edge against Japanese competition.

"I guess you could say I was the primary sponsor of lean production. Every project has to have a champion and that was mine," Hughes said.

Eisenach, which at scheduled capacity will produce a combined 150,000 Astra and Corsa models a year, is GM's "beachhead in the east," said Hughes.

"Any greenfield project that we make, in Eisenach or Portugal, has to demonstrate that we have taken all we learned from ourselves and the competition and come in with most efficient plant possible."

But the project is even more important because Hughes wants to demonstrate that lean production can work in a former communist state with a "work force not accustomed to such techniques."

"In GM Europe, we have a vision regarding a lean production system, and we have to implement that vision. The entire organiza-

Science academy fuels CAFE fire

Government panel pans current rule

MAX GATES
Staff Reporter

WASHINGTON — Far from settling the simmering feud over automobile fuel economy standards, a long-awaited National Academy of Sciences report has virtually all the combatants claiming victory.

Eleven months after it convened, the panel issued its report last week, concluding that "an average fuel economy level of between 34 and 37 miles per gallon by the year 2006" is technically possible. The committee said, for example, that large-sized cars could average 30 to 33 mpg, compared to an average 23.5 mpg today.

But the committee said those improvements in fuel economy carry a cost — reduced safety, less consumer choice and major development costs for the auto industry.

The committee suggested that the best way to reduce fuel consumption would be to raise the price of gasoline through a tax.

The panel criticized the current system for setting corporate average fuel economy standards. It said CAFE rules put a heavier burden on full-line automakers, who must balance their gas guzzlers by pushing small car sales. It also said the system works against market forces, such as the current consumer trend toward larger, more powerful cars.

The Motor Vehicle Manufacturers Association said the report proves that fuel economy should stay on the Congressional backburner because it "confirms that proposals in Congress calling for steep increases in fuel economy standards are unrealistic."

But a spokesman for Sen. Richard Bryan, D-Nev., said the report is evidence that Congress should get moving on Bryan's bill to raise fuel economy by 40 percent by the year 2001.

"The bottom line is, this report says we can increase fuel economy and we can do it safely," said Bryan spokesman Jim Mulhall. "So let's get going."

The Department of Transportation asked the independent National Academy of Sciences to review fuel economy technology last year when Congress began to consider increasing the CAFE standard from the present 27.5 miles per gallon.

Congress quit debating CAFE last year as too controversial, but it could be revived this spring. Bryan may try to attach CAFE to the Japan trade bill being examined in House and Senate hearings, Mulhall said.

In its 279-page report, the committee suggested, but stopped short of recommending, a CAFE system that would set targets for new cars by weight class. That system would spread the burden evenly over all manufacturers.

The committee suggested that a gasoline tax — which it labeled "price correction" — would be a better way to improve fuel economy, giving motorists an incentive to purchase more efficient cars. It did not consider how big a "price correction" would be needed.

The committee also suggested a "feebate" system — a tax on purchases of gas guzzlers and rebates to buyers of gas-sippers. But again, it gave no guidance on how this would be implemented.

Safety concerns have been over emphasized in the CAFE debate, the report said. Fuel economy improvements would probably require no more than 10 percent downsizing in vehicle weight, and most safety sacrifices caused by weight reduction could be offset by improved design and technology, the panel said.

The big, the fast to bow in N.Y.

New York
'92

NEW YORK — For the second straight year, the New York auto show's theme is "Responsible Motoring," but its only world debuts will be big and fast.

The big one, the 1993 Cadillac Brougham, carries a 5.7-liter V-8 and will retain its title as the longest American production car.

The fast one, the 1993 IsoRivolta Grifo, is a $225,000 sports car made in Modena, Italy.

BMW's 525i wagon makes its North American debut at the New York show.

The show's theme will be spotlighted in a separate display focusing on safety, fuel efficiency, pollution control and alternative-fuel vehicles. It will include the flexible-fuel Subaru Rioma, the hydrogen-powered Mazda HR-X and the 100-mpg Ultralite concept sedan from General Motors.

Products making their U.S. debut include the 1993 BMW 525i Touring Sport wagon, the Volkswagen Passat GLX and Nissan's restyled 1993 pickup.

The New York International Automobile Show is the nation's oldest and best attended, drawing more than 1 million people. Sponsored by the Greater New York Automobile Dealers Association, it runs April 18 to 26 at the Jacob K. Javits Convention Center.

VW's VR6-equipped Passat as it appears in Europe; the U.S. version will be called Passat GLX.

Chrysler Corp. Chairman Lee Iacocca will kick off this week's press events Wednesday with an address to the New York-based International Motor Press Association. He could make an announcement regarding Chrysler's electric-powered minivan project.

Chrysler has been working with the Electric Power Research Institute to develop an electric-powered minivan.

Domestic makers still ahead in installation of safety items

CHARLES E. RAMIREZ
Special Correspondent

Domestic automakers continue to lead the imports in installation of anti-lock brakes, traction control and driver-side airbags in passenger cars, according to an *Automotive News* analysis.

The analysis of 1991 model production figures of some manufacturers shows that the trend of equipping cars with the safety devices appears to be growing.

Chrysler Corp. leads most domestic and import makers in driver-side airbags with a 96.2 percent installation rate in 1991 and 1990 for domestic-built cars.

General Motors leads in installation of ABS, with a 24.4 percent installation rate on its 1991 domestic-built cars. GM had a 36.4 percent rate for driver-side airbags.

In 1990, GM had an 8.4 percent ABS installation rate and a 14 percent driver-side airbag rate.

Ford Motor Co.'s domestic-built cars had a 17 percent installation rate for ABS and a 50 percent rate for driver-side airbags in 1991, up from 13 percent for ABS and 49 percent for airbags in 1990.

Imports, generally slower in equipping vehicles with these safety items, showed increases.

All BMW, Saab, Porsche and Mercedes-Benz models had 100 percent ABS and airbags rates. Volvo, Acura, Infiniti and Jaguar had 100 percent ABS rates. Alfa Romeo, Isuzu and Audi had 100 percent driver-side airbag rates.

Of the four highest-volume Japanese makes, Toyota led in the installation of driver-side airbags with a 30.2 percent rate in 1991 for imported cars, up from zero in 1990. Nissan was first in ABS installation rates with almost 20 percent in 1991, an increase from 9.3 percent in 1990.

Customer pressure on automakers to focus on these safety features and technology will raise safety installation rates in 1992.

Airbag installation rates are expected to escalate as carmakers try to catch up with market demand. Federal law requires all passenger cars to have driver- and passenger-side airbags in 1998 and all trucks to have airbags by 1999.

Adcox vows to protect reputation, fight lawsuit

The Associated Press

CHATTANOOGA, Tenn. — A prominent Chattanooga auto dealer accused of shady business practices is fighting back with a universal sales tool: advertising.

Herb Adcox, whose Chevrolet dealership was hit with a $15 million class action lawsuit earlier this month in U.S. District Court, ran a full-page newspaper ad rebutting the allegations.

"There's nothing in there that we can't defend," said Adcox, the National Automobile Dealers Association director from Tennessee who has operated Herb Adcox Chevrolet for 40 years.

Adcox: "This is my reputation at stake."

Fifteen plaintiffs contend the dealership has charged exorbitant interest rates, used questionable selling techniques and tricked customers into signing blank finance contracts.

Adcox, in an ad in the *Chattanooga News-Free Press*, denied the allegations. He said his advertising "is the most honest and truthful of any car dealer in the United States."

The ad compared the plaintiffs to Chicken Little, the fable character who warned everyone the sky was falling after he was hit in the head by a falling stick.

In an interview with *The Chattanooga Times*, Adcox vowed to fight the accusations in court: "This is my reputation at stake."

William Brown, a Cleveland, Tenn., attorney who filed the suit, said 150 people have asked to join in the lawsuit, and the Chattanooga Better Business Bureau says the allegations are not new.

"We have gotten several complaints, and they do seem to follow a pattern," said Better Business Bureau President Kathryn Conklin. "They seem to have to do with selling practices and advertising issues."

Better Business Bureau files indicate Adcox charges nearly 20 percent annual interest on some new-car loans. The lawsuit contends the dealership encouraged buyers to sign blank finance contracts with a certain monthly payment, then filled in higher interest rate figures than the advertised 11.9 percent.

The plaintiffs also contend that Adcox salespersons used "bait and switch" tactics. In 1990, the Tennessee Motor Vehicle Commission investigated similar bait and switch complaints against Adcox but found no evidence of wrongdoing. Adcox is a member of the commission, as well as a former president of the state auto dealers association and the Chattanooga Area Chamber of Commerce.

Adcox said he has met state advertising guidelines requiring dealers to state at least one stock number for each car advertised. He denied altering finance contracts.

Adcox defended the high interest rates as part of a tiered rate structure that allows him to finance poorer credit risks. Buyers with good credit qualify for lower rates, he said.

GM takes its time to get redesigned vans right

JOSEPH BOHN
Truck Editor

General Motors, mindful of rushing some new trucks too quickly to market as it did with the APV minivans, is still researching its next generation of full-sized G-vans, due in 1995.

Ford Division brought out its redesigned Econoline/Club Wagon this past year.

Dodge Division will introduce its restyled Ram Vans and Ram Wagons next spring as 1994 models, confirmed Kelly Mankin, Dodge truck marketing plans manager.

But the revamped Chevrolet Chevy Van/Sportvan and GMC Vandura/Rally Wagon will not bow until fall 1995 as 1996 models.

GM officials privately say they rushed some new products to market, like the APV minivans.

The heavy, plastic-bodied minivans debuted in the 1990 model year with a three-speed automatic transmission and 3.1-liter V-6 engine. Sales were hurt by their slugglish acceleration.

The 1992 Chevrolet Lumina APV, Oldsmobile Silhouette and Pontiac Trans Sport now offer a four-speed automatic transmission and GM's powerful 3.8-liter engine.

Officials are researching the full-sized vans more thoroughly. After two years of planning, they are querying body builders and upfitters on such things as color and preferences for sliding or conventional doors.

The new vans are in the clay model stage; GM plans a ground-up revision.

In addition to more aerodynamic styling, the vehicles will have all-new suspension systems for better ride and handling, revised wheelbases, and higher gross vehicle weights and payload-carrying capacities, according to commercial body builders and upfitters.

The vans will debut with a complete complement of safety equipment, such as driver- and passenger-side airbags, crush-reinforced roofs and side impact protection in the doors.

By contrast, Dodge's van and wagon changes will be mostly in styling, including new front and rear treatments.

The Dodge vans had their last major facelift in 1979.

In 1986, the vans had a partial facelift, with new grilles, lights and ornamentation.

GM's vans haven't had a major update since the 1977 model year. But GM has continued to add new models, such as the 15-passenger version it introduced in 1990.

The commercial and conversion markets are very important to full-sized van sales, which is why GM is querying body builders so intently.

Full-sized cargo vans accounted for 80.1 percent of this market during the first quarter of 1992 and passenger versions accounted for the balance, according to *Automotive News* tabulations based on Motor Vehicle Manufacturers Association sales reports.

About half of the cargo vans end up as personal-use vehicles, however, after being finished by van converters.

Both markets strongly rebounded this year. Full-sized cargo van sales totalled 66,283 units in the first quarter, an 18.5 percent increase over the first quarter of 1991, according to MVMA and *Automotive News*.

Wagon sales totaled 16,438 units during that same period, up 52.3 percent over the year-ago mark.

During the first quarter of this year, sales of Ford's redesigned Econoline were up 20.6 percent and Club Wagon sales were up 86.8 percent.

The redesign also boosted the Club Wagon's share of the full-sized passenger van market during the same period to 48.0 percent, up from 39.2 percent a year ago. The Econoline's share of the full-sized cargo van market increased to 41.1 percent, up from 40.4 percent in the first quarter of 1991.

GM officials concede they will have to use some very aggressive marketing efforts over the next couple years to fend off Ford until the automaker's new vans hit the market.

Combined sales of Chevrolet and GMC vans totaled 26,301 units in the booming first quarter, up 16.1 percent. But GM's share of the full-sized market slipped to 39.7 percent, down from 40.5 percent a year ago.

Its share of the full-sized wagon market fell to 15.9 percent during the quarter, down from 19.5 percent a year ago, according to *Automotive News* tabulations.

Dodge's share of the big van market held steady at 19.2 percent. Its share of the big wagon market dropped to 36.1 percent, down from 41.3 percent a year ago.

Mankin said Dodge has been exhorting dealers to become more aggressive in the commercial van market by stocking such vehicles.

Chrysler Corp. also has been running direct mail and other marketing programs to target small businesses in its quest to expand commercial sales. AN

Japan sales fall 3.8% for fiscal year

MARY ANN MASKERY
Staff Reporter

TOKYO — New vehicle sales in Japan registered their first annual decline in 11 years in the just-ended fiscal year as sales fell 6.5 percent in March, traditionally the strongest month.

The March decline, to 694,518 units, marked the 11th consecutive month of weaker sales and closed out the fiscal year with a 3.8 percent drop to 5.7 million units. Including mini-vehicles, the market was off 4.8 percent for the year to 7.4 million units.

For the quarter, sales excluding minis fell 4.3 percent from a year earlier to 1.47 million units.

Analysts attributed a small part of the March decline to buyers waiting for a scheduled cut in the car-sales tax, which takes effect this month.

The deferral effect "may have cost a couple of points of sales," according to analyst Steve Usher of Kleinwort Benson International in Tokyo. "But overall, the market remains very weak."

Alone among the industry's five biggest producers, Mitsubishi Motors Corp. scraped out a 1.8 percent sales gain last month to 64,209 units.

But Toyota Motor Corp. was down 5.8 percent to 290,359; Nissan Motor Co. fell 8.6 percent to 168,572; Mazda Motor Corp. fell 6.2 percent to 49,534; and Honda Motor Co. sales slipped 5.9 percent to 48,463.

Import sales in March slid a steep 21.6 percent from a year earlier to 17,398, continuing a decline now in its 15th month.

Volkswagen sales slid 47.8 percent to 2,056 units; Audi fell 42.5 percent to 1,247, and Mercedes-Benz fell 18.5 percent to 3,088.

Countering the market, General Motors sales rose 7.4 percent to 1,030 units. Officials said the upturn reflected positive response to a comparative ad campaign launched by GM in early March. AN

26.6% gain by VW leads Mexico sales hike in Jan.

MEXICO CITY — The Mexican market in January picked up where it left off in 1991, with Volkswagen leading the way to a boost in sales.

Total industry sales rose 4.8 percent in January, due primarily to 26.6 percent gain at volume leader VW. Its biggest gain came from the soon-to-be-replaced Golf, which doubled to 4,516 sales.

General Motors, the industry's truck leader, posted the only other sales increase among Mexico's Big Five makers. A 15 percent rise in truck sales offset a decline in cars, and GM finished the month with a 6.5 percent overall gain.

Chrysler, Ford and Nissan all posted small losses in January.

The Mexican industry is coming off its most productive year ever. Nearly 1 million vehicles were built in calendar 1991 for Mexico's market and export. The pace increased in January 1992 when total car and truck production reached 94,048 units, topping year-ago levels by 19.4 percent.

VW, Ford, GM and Chrysler each had significant boosts in export production, most of it bound for the United States. AN

Forward Focus

Expense control was the watchword in 1991 as dealer took action to combat expected downturns in sales and profits

By: Joseph Bohn

The average medium- and heavy-truck dealership's sales and profits dropped to their lowest level in five years during 1991.

New-truck, labor and parts sales all declined during the dismal year. Used-truck sales posted the only increase.

But as the American Truck Dealers 29th annual convention and exposition at the San Francisco Hilton winds up on Tuesday, dealers can console themselves with the improving market outlook and the job they have done in sharpening their business-expense controls.

As tough as 1991 was, "it could've been a heck of a lot tougher if the guys hadn't realized what was going on and stepped up to control their expenses," said Fred Stevenson, manager of ATD consulting services in McLean, Va.

From less than a 1 percent net profit during the first half of 1991, dealers managed to post a 1.5 percent profit for the full year by curtailing expenses, Stevenson said. Expense control has pretty much become their watchword.

Stevenson, like other analysts, said the new-truck market has started to turn upward.

He anticipates U.S. Class 8 truck sales reaching 220,000 in calendar 1992, up from last year's 98,730 units.

"Dealers now have to get their parts and service business in such a position that new and used truck sales become incremental profits for them," Stevenson said.

"The really successful ones are doing that already. They have a more effective management of their parts and service departments, more effective merchandising, and provide extra services" for customers, he said.

"The challenge for the dealer today is to expand his services for his customers. He has to know more about his customers' businesses to serve them properly. Call it 'value-added,' " Stevenson said.

ATD's 20 Groups averaged only $1.358 million in sales last year, down 9 percent from a year earlier, and lowest since 1987's average of $1.362 million.

The overall decline in sales led to a 7.8 percent drop in dealers' gross profits.

Although dealers managed to trim their expenses by 4.9 percent, it was not enough to offset the decline in grosses. They averaged only 1.5 percent in net profits as a percent of sales, before bonuses and taxes. That was down from 2.0 percent in 1990 and lowest since 1986, when ATD first began tracking these numbers.

Parts and service receivables of $530,000 were up 2.8 percent from 1990, while parts and service sales of $435,500 were off 7.4 percent.

Parts and service receivables for items over 30 days past due dropped slightly to 33.3 percent, indicating dealers either were being more cautious in extending credit or tightening up their collection procedures.

Warranty sales of $43,800 were up 5 percent. Warranty receivables as a percentage of warranty sales were 236.3 percent, a 4.1 percent drop from 1990.

While this figure is substantially above the ATD guideline of 150 percent, it is the lowest ATD has recorded and reflects the increased emphasis being given warranty receivables by dealers and original equipment manufacturers.

New-truck grosses as a percent of sales totaled 5.6 percent. That was lowest since the 4.7 percent in 1987 and represented a 9.7 percent drop from 1990.

Dealer gross as a percent of labor sales totaled 63.7 percent, down slightly from 63.8 percent in 1990. The gross as a percentage of parts sales also dropped slightly to 25.7 percent from 25.8 percent — reflecting greater competition for this business.

Parts and service absorption reflected one bright spot in an otherwise bleak year. At 90.4 percent, it was up 1.6 percentage points and was at the highest level ever calculated by ATD.

Stevenson said this reflects dealers' emphasis on expense control and cost reduction. ☐

Joseph Bohn is truck editor for Automotive News.

Laying Down the Law

Government regulators are readying significant rules this year

By: Max Gates

If 1991 was the year of environmental concern following passage of the Clean Air Act amendments of 1990, then safety is the issue in 1992 following passage late last year of the Intermodal Surface Transportation Efficiency Act, or ISTEA (pronounced like "ice tea").

No significant safety rules are ready to take effect, but several are being written, says Barry Felrice, associate administrator for rulemaking at the National Highway Traffic Safety Administration.

A new regulation on rear underride protection should be ready by early 1993, Felrice says. The rule is designed to prevent vehicles from slipping under the back of a large truck or trailer in a rear-end collision.

The current proposed rules apply only to trailers, "although there are activists asking why they don't apply to straight trucks as well," notes Thomas Carr, vice president with the Motor Vehicle Manufacturers Association. "So far, there hasn't been anything on that."

Rear underride guards were last proposed 10 years ago and first proposed 10 years before that, Felrice says. The last time around, the rules were killed by opposition to testing require-

---

Franchise Feedback

ATD survey ratings spark Volvo, GMC and Nissan to step up their direct communications with dealers

By: Joseph Bohn

Volvo GM Heavy Truck Corp. improved the value of its franchise dramatically during 1991, according an American Truck Dealers' dealer attitude survey.

The swift change occurred between May 1991 and November 1991. Dealers only gave Volvo GM a 6.5-point rating out of a possible 10 in May. They bumped that up to 7.3 points by November.

"The folks at Volvo GM started listening to dealers and the dealer council in a new way. It had a positive effect on the dealer body," said Jim Westlake, director of the American Truck Dealers division of the National Automobile Dealers Association.

The medium-duty truck operations of GMC, Chevrolet and Nissan Diesel America Inc. are likely to be next in scoring significant ratings improvements this year.

That is because GMC, which handles medium-duty truck marketing for itself and Chevrolet, is expanding sales and service support for 650 dealers it handles, said Ray Rota, GMC general sales manager.

GMC had cut back field sales and service support for the dealers as an economy move. The division relied on light-truck field personnel and telephones to take up the slack, said Westlake.

"The dealers slam-dunked them," he said, referring to the below-average 6.4-point and 6.2-point ratings in the value of GMC and Chevrolet franchises.

"There's no satisfactory alternative to dealing with dealers directly. GM got the message," Westlake said.

Other than the communications problem, GM dealers and customers have "really liked the products and done well with them," Westlake added.

DEALER PERCEPTIONS OF FRANCHISE VALUE

Source: ATD dealer attitude survey

*Statistically significant at a 95 percent confidence level

Nissan Diesel's rating by its UD-brand dealers "is guaranteed" to improve as a result of establishing a dealer council, said Jerry Dion, owner of Westrux International Inc. in La Mirada, Calif.

Dion is one of Navistar's largest dealers and also sells Nissan's UD trucks.

Nissan Diesel was the second-last major manufacturer to establish a dealer council in October 1991, according to Westlake.

It only held its first official council meeting with dealer representatives in January 1992, according to Dion, who is the dealer council's first chairman.

Isuzu Truck of America still doesn't have a dealer council, Westlake said.

Japanese medium-duty truck importers have typically been slow to establish dealer councils. They generally used dealer advisory groups, with members appointed by the importers, during their initial years of operation in the United States.

Mitsubishi Fuso Truck of America Inc. was the first of the four Japanese medium-duty importers to come up with a national dealer council.

Hino Diesel Trucks (U.S.A.) Inc. became the second last year, and was followed by Nissan Diesel later in the year.

Without a dealer council, Nissan Diesel "hasn't had a formalized dealer/company communications process to deal with broad issues," Dion said.

The company received a 6.1-point rating on the value of its franchise by its dealers.

"Now that they have one, it will be a big benefit to both parties," he added.

ATD surveys dealer attitudes about their franchises twice a year. In spring, it conducts an expanded, 150-question survey, and in the fall an abbreviated one.

"With the expanded survey, we've been able to detail the 'why' of dealers's concerns. Before many manufacturers got only the big picture," said Westlake.

Within the past two years, Westlake, along with the appropriate national dealer council chairman and ATD line representative, have begun paying visits to individual truck manufacturers when the survey results become available.

Typically, the trio of NADA and dealer representatives discusses issues brought out by the surveys with the top managements of the different truck nameplates.

"It saves everybody a lot of time and research because we're doing it for them (manufacturers)," Westlake said.

"They get a clearer picture of dealers' concerns and how to address them," he added.

ATD even separated dealer responses into six regional categories, so that different area concerns can be highlighted.

"If a manufacturer gets a good response from dealers in five areas and shows a particular weakness in the sixth, factory officials can hone right in on the one guy who's responsible," Westlake said.

The dealer ratings of their franchises are purely subjective. They reflect an attitude — but they also provide a kind of report card on how good a job manufacturers are doing.

Manufacturers take them seriously. Westlake said current changes by Chevrolet, GMC and Nissan clearly indicate that. ☐

NAFA survey finds strong fleet sales in store for '92

Ninety-eight percent of U.S. respondents to an NAFA survey indicated the 1992 vehicles purchased or leased for use by their sales and service personnel bear Big 3 nameplates.

General Motors came out on top in the survey, with nearly 41 percent of all fleet sales. Ford had 34 percent and Chrysler 23 percent.

Imports will account for 2 percent of 1992 fleet sales in the United States, with Toyota the biggest seller.

"Fleets have long been great supporters of the domestic manufacturers," says Gordon West, NAFA president. "Year in and year out, the Big 3 have been able to count on the fact that fleets will purchase at least 25 percent of all newly manufactured vehicles. In tough economic times such as these, and with global competition a reality, it's difficult to ignore the importance of steady fleet sales."

Only 1 percent of all respondents said they plan to switch from company-provided to employee-provided vehicles.

Respondents indicated they purchased or expect to purchase 33,082 1992 cars, 14,601 light-duty trucks and 8,726 vans (total 56,409).

Respondents indicated they have leased or will lease 45,933 cars, 12,771 vans and 6,657 light-duty trucks (total 65,361).

The combined total of purchased and leased vehicles is 121,770, up from last year's total of 80,490.

Not only will strong fleet sales continue, but 15 percent of respondents said they will increase the number of vehicles in their fleets during the next year. With each respondent managing an average of 1,194 vehicles, that means manufacturers should be in for another good fleet sales year in 1992.

Source: National Association of Fleet Administrators survey

More than half of survey respondents said manufacturers' option packages have affected their selection of fleet vehicles. Most significantly, respondents said option packages have resulted in increased vehicle costs.

Cellular phones are making drivers more efficient; 51 percent of all survey respondents provide cellular phones in their fleet vehicles.

Who has cellular phones in their company-provided vehicles? According to the survey, 52 percent are provided to management, executives and administrative personnel. In addition, three of 10 vehicles provided to field sales, marketing, service and claims personnel have cellular phones. And "those who need one" (11 percent) are provided with a cellular phone.

Most respondents (84 percent) indicated they do not order optional or aftermarket anti-theft devices for their fleet vehicles.

More than one-quarter of survey respondents indicated they plan to acquire alternate-fuel vehicles for their fleets, and compressed natural gas vehicles are the top choice (58 percent).

Of the 13 percent who indicated changes are planned in the size or type of their fleets, most are going from fleets of mainly full-sized to mid-sized vehicles. This reverses the trend in last year's survey.

The survey drew 562 responses, or 27 percent of NAFA's membership. Corporate members made up 58 percent of the respondents, government/law enforcement personnel 18 percent, and public utility personnel 6 percent. They manage 362,574 company-owned and 209,411 leased vehicles (571,985 total).

Most of those vehicles (56 percent) are cars, with light-duty trucks second (23 percent) and minivans third (21 percent). ☐

Canadian fleet managers' purchases also emphasize safety

Canadian vehicle fleets are becoming safer too.

A survey by NAFA found that 8 percent of corporate respondents only order vehicles with airbags and 32 percent order airbags whenever the option is available.

None of the respondents representing public utility fleets said they require airbags, although 33 percent order them as an option when available. The figures for law enforcement/government fleets indicated 17 percent require airbags.

Anti-lock brakes are required by nine percent of Canada's corporate respondents; 21 percent order them as an option when available.

No public utility respondents required ABS, but 33 percent order it as an option when available.

The figures for law enforcement/government fleets indicate 8 percent only order vehicles with ABS; 8 percent order it as an option when available.

Ten percent of corporate respondents order optional or aftermarket anti-theft devices for their fleet vehicles, while 33 percent of public utility fleets provide the devices. So do eight percent of law enforcement/government fleets.

Canadian respondents indicated they purchased or expect to purchase 3,348 cars, 1,211 vans and 1,905 light-duty trucks (total 6,464) in 1992. They lease or expect to lease 3,703 cars, 736 vans and 1,036 light-duty trucks (5,475 total), for a grand total of 11,939 new vehicles acquired.

Canadian members purchased or expect to purchase most of their vehicles from General Motors (39 percent). Ford was second at 35 percent, with Chrysler at 24 percent.

Imports accounted for 2 percent of Canadian fleet sales, with Nissan on top.

Of the 53 percent of Canadian respondents who indicated manufacturers' option packages affected their selection of fleet vehicles, three-quarters said it resulted in increased vehicle costs.

Over half (51 percent) said they provide cellular telephones in their fleet vehicles. The phones are provided to management, executives and administrative personnel (36 percent); field, sales, marketing, service and claims personnel (29 percent); and those who need them (17 percent).

Over one-quarter (28 percent) plan to acquire alternate-fuel vehicles for their fleets. Propane is the fuel of choice of 57 percent.

Thirteen percent of respondents indicated vehicle changes are planned, with many switching from mid- and full-sized cars to minivans. Ten percent will increase the number of vehicles in their fleets.

NAFA received 82 responses from Canadian members (up 11 percent from last year). Of those, 59 represented corporate members, 12 were from law enforcement/government, three were from public utilities and nine indicated "other." They manage 50,472 company-owned and 13,505 leased vehicles (63,977 total). ☐

▶ **From Page 14i**

According to NAFA's survey, 14 percent of corporate fleet managers only order vehicles with ABS, 4 percent of public utility fleets provide ABS, and 11 percent of law enforcement and government fleets require ABS.

Almost one-third of both corporate and public utility fleets order ABS as an option when available, and 45 percent of law enforcement and government fleets order ABS as an option when available.

NAFA also has released the results of another membership survey conducted at the request of OSHA to determine the frequency of certain safety-related practices of U.S. fleets.

Questions focused on policies which require drivers to wear seat belts while operating vehicles on official business, and on policies regarding any employer-provided safety awareness training for drivers.

Two conclusions were reached:

- An overwhelming number of fleets (78 percent) already require drivers to wear seat belts while operating vehicles on official business.
- The great majority of fleets (70 percent) do not provide mandatory driver safety awareness training for all individuals who drive regularly on official business.

According to the survey, generally the larger the fleet, the greater the likelihood that the fleet would mandate seat belt use.

About one-third of employers who require seat belt use impose a penalty on drivers who fail to obey the policy.

Companies that do not impose a penalty said it is difficult to discover non-use in scattered fleet operations, and, in any case, seat belt-use is required by law in most areas.

Fewer than one-third said they provide driver safety awareness education for "all employees who regularly drive on official business."

Some companies said they provide training for drivers covered by commercial drivers license regulations, but not for sales, service or executive personnel.

In-house instructors are the most popular vehicle for employer-provided driver safety awareness training. Others use outside vendors and a few use videotapes.

The most common time period for providing driver safety training is within the first 90 days of employment. The duration of training is usually four or more hours.

Many who cited training as lasting more than four hours said the training includes commercial drivers-license education and instruction that includes behind-the-wheel sessions.

Driver safety awareness instruction also usually includes vehicle familiarization, use of safety equipment, effects of alcohol and drugs, and safe driving practices. ☐

HUGHES

Will lead GM Europe by doing

continued from PAGE 3

tion has a long way to go and we don't kid ourselves," he said.

If Eisenach works, "it becomes almost a lighthouse, a symbol for the rest of Europe," Hughes said.

Hughes had intended to stay at Opel for another two years, particularly to see Eisenach through to full capacity. But since Opel represents two-thirds of GM's European manufacturing capacity, he is certain "my reforms will not be jeopardized."

Hughes said he knew "for some time" that he was a candidate for the job vacated by Eaton, Chrysler Corp.'s new vice chairman. But he said there was no connection between his promotion and his being named a corporate vice president the week before Eaton resigned.

"That was a true coincidence," Hughes said.

Hughes is not easily labeled as either a "bean-counter" or a "car guy," the tags given to executives from the finance or engineering side. Hughes understands both the process and the balance sheet.

Hughes, who earned a mechanical engineering degree from the former General Motors Institute and a master's degree in business administration from Harvard University, joined GM in 1966, under a work-study program.

He moved to the corporate treasurer's office in New York in 1973, was promoted to assistant treasurer in 1982 with general overall responsibility for international activities, and was named vice president of finance and a member of the board of directors of GM of Canada in 1985.

In March 1987, Hughes moved to GM Europe headquarters in Zurich as vice president of finance. He became Opel's chairman and managing director in April 1989.

Executives say Hughes won over his managers and blue-collar workers at Opel by learning German and insisting that all business be conducted in German. He talked to workers, spent a week on the assembly line in Russelsheim at Opel's major plant, and streamlined the business.

But Hughes refuses to take sole credit for transforming Opel's image, product range and processes. "Our accomplishment is what the team has put together," Hughes said.

He wants his workers to feel that "anyone can come to you and feel they are being listened to and their are problems acted on."

"They have to know that they are treated as a peer," he said.

When problems occur, it is because of a failure in the process or the system, not necessarily because of an employee, Hughes said.

At the helm of GM Europe, Hughes said he will "do the same thing I did at Opel.

"For a while I will listen and sit down and have in-depth discussions with key players, and sort it out and build a team again. We have a very good team."

The reshuffling of GM management corporatewide hasn't increased the pressure on Hughes, who attributes his ability to cope to a balanced life he shares with his wife Candy, a psychologist, and his children.

"I sleep well every night despite the pressure. I take my briefcase home on Friday night, play with my kids, and do not open it until Sunday evening. You have to know when to shut the company off, to regenerate yourself."

EXPORTS

MITI gives more to smaller makers

continued from PAGE 1

companies comes from Daihatsu, which announced its withdrawal from the U.S. passenger-car market earlier this year.

The allocation for Suzuki Motor Corp. will match the company's U.S. sales in the year ending March 31, sources said.

Overall, the changes are expected to accelerate existing trends for Japanese makers in the United States — higher prices and a shift upmarket; increased emphasis on luxury brands; and more U.S. production. In determining allocation, MITI used actual exports for fiscal 1990 and 1991, giving consideration to U.S. production capabilities.

Toyota, Honda, Mitsubishi and Mazda have used at least 80 percent of their allocations in recent years, while Nissan, Subaru, Suzuki and Daihatsu used far less.

In fiscal 1990, Isuzu exported 121,000 passenger cars to the United States, its entire allocation. The company expected to export 110,000 passenger cars in the just-ended fiscal year, when its allocation was 124,000 units, but a spokeswoman last week declined to confirm the figure. According to the spokeswoman, Isuzu shipped 94,102 units to the United States in calendar 1991. The allocation for the coming year is 110,000.

General Motors buys most of Isuzu's passenger-car exports to the United States for distribution through the Geo sales channel.

Ben Moyer, an analyst at Merrill-Lynch's Tokyo office, said he expects the lower ceiling to affect Japanese planning in the United States: "They've wiped out 650,000 units of future supply capability. It is going to change their strategy."

Moyer cited several possible consequences:

- Mitsubishi Motors might now try to reduce the proportion of Chrysler models coming out of the Diamond-Star Motors plant in Normal, Ill.;
- Toyota could move up plans for a second Camry assembly line in Georgetown, Ky.;
- Honda may add capacity in the United States.

Moyer predicted that incentives will be used less aggressively by the Japanese companies: "There is not as much need to reduce inventories. They can let inventories come down more naturally."

TOYOTA

Execs may share responsibilities

continued from PAGE 1

of strategic and product planning.

- James Press, 46, recently named president at subsidiary Toyota Aviation Inc. after serving as senior vice president at Southeast Toyota Distributors Inc.
- Jerry Pyle, 55, president and general manager of Gulf States Toyota Inc., an independent distributor.
- John Matt, 53, general manager of Toyota's Los Angeles region.

Olson said that the company had planned to make announcements about all the changes after a biannual meeting with the Toyota Motor Corp. board in June. But press reports in Japan about McCurry's departure "forced our hand" into making an announcement last week. He said additional changes will be revealed "as soon as Yale and Shinji are ready."

Sources inside and outside the company say that Toyota in Japan had been planning to change the guard for months. The parent company had viewed the pending retirement of McCurry as an opportunity to exert more control. That will be easier with a more decentralized structure.

In addition, Toyota's volume-oriented strategy has been costly politically and financially. The move to a more finance-oriented leadership, as reflected by the choice of Gieszl and Sakai, acknowledges a need to capture more profit from each sale.

McCurry has left a deep imprint on Toyota's U.S. sales organization since taking over in 1984. A quintessential salesman, he pushed volume with aggressive advertising, incentives and promotions — and through the sheer force of his personality.

Dealers say he demanded total loyalty. Those that weren't viewed as "team players" risked having their allocation squeezed.

Detractors say he manages by fear. Others say he simply knows what he wants done and how to do it. "I don't get stress, I give it," is one of his favorite sayings, according to Toyota lore.

While McCurry is rightly credited with establishing Toyota firmly as the top importer in the United States, his autocratic style was out of step with the times. As Toyota and other Japanese companies have come under protectionist fire, McCurry's volume-at-any-cost strategies conflicted with Japan's wish for a lower profile.

McCurry, for example, had publicly proclaimed his need for a full-sized pickup. The parent company, apparently shy of pitting Toyota squarely against the Big 3's last remaining exclusive profit center, first put the decision on hold. When the truck arrives in the 1993 model year, it will be a less threatening mid-sized model.

Togo is also a hard-charging salesman in much the same mold as McCurry. Unlike many Japanese executives who keep a low profile, Togo relishes the spotlight. He visits dealers frequently. His round business cards, which feature a caricature of him, have become a Toyota legend.

Together, they've made a formidable pair.

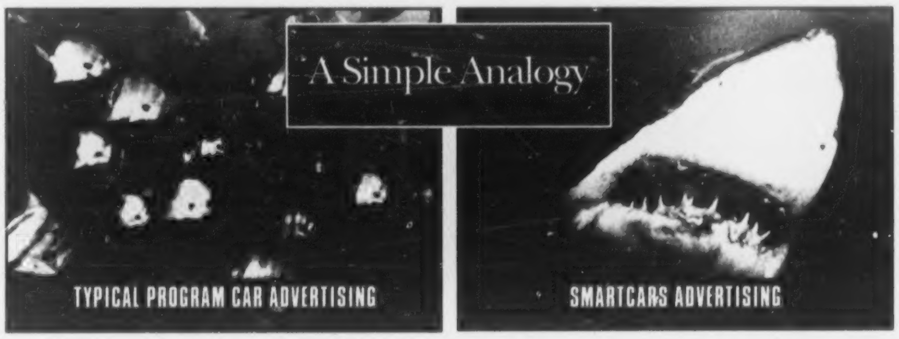
"Whether you liked their strong-arm tactics or not, they did a helluva job," says one dealer.

In contrast, Gieszl is said to be quiet and contemplative. And Sakai is different than Togo. "As Bob and Yuki are alike, so are Yale and Shinji," says Olson.

Sakai's background, like Gieszl's, is in finance. As a Toyota Motor Corp. director since 1988, Sakai has worked with U.S. executives as a liaison between the parent company and the U.S. sales arm. In his most recent position, Sakai oversaw North American production and marketing.

Toyota says it hasn't decided exactly what Togo and McCurry will do in their new jobs. Some dealers wonder whether they'll actually step out of the day-to-day loop.

Olson said McCurry has discussed working in Toyota's Washington office. Togo plans to set up an office in Hawaii.



Today, higher profits means getting their attention.

Today, you need a powerful advertising message to get the consumer's attention. Smartcars can give you that competitive edge by positioning your store as *the premier* program car retail outlet in your market. With Smartcars advertising you'll be like a shark swimming with the guppies. Consumers will take notice and the result will be dramatically increased floor traffic.

Face it, advertising attracts customers. The problem these days, is that everybody's advertising looks alike. Consumers are often not getting your message. If you're selling program cars the problem is even worse because every dealer has them and consumers remain confused about what they are. Smartcars will fix all of that.

That's not an idle promise. All you have to do is look at over 110 Smartcars dealers throughout the U.S. and Canada to see what this powerful advertising program means in terms of increased floor traffic and profits.

If you understand program cars and the power of effective advertising, you owe it to yourself to examine this dramatic advertising package for television, newspaper and radio. The Smartcars advertising system is a way to break away from the pack and into higher profits.

Call 1-800-466-5663 to receive a sample video tape and brochure.

There is a whole new market of value seeking consumers waiting for you to speak to them.

Let Smartcars show you how.

FIRST QUARTER
SALES

RESULTS

Truck sales boost first quarter sales

continued from PAGE 3

the companion Dodge Shadow was up 18.7 percent.

The Sundance sales gain was due to sizeable incentives on the one-price base America model as well as strong sales of the sportier V-6 Plymouth Duster version introduced this year.

— Mary Connelly

Ford

Ford Motor Co. entered the second quarter with a spring in its step. Combined sales of the company's cars and trucks totaled 709,356 units, a 7.3 percent increase over the same period last year. Ford Division recaptured the car lead from Chevrolet, outselling Chevrolet (which includes Geo) by 31,209 units. At the end of March last year, Chevrolet was ahead by 2,212 car sales.

With 84,321 sales, Taurus was the No. 2 car through March and was 1,355 units behind the Honda Accord.

Ford's truck lead over Chevrolet of 61,912 units was almost three times last year's margin.

"General Motors is my second favorite car company," said Ross Roberts, general manager of Ford Division. "I hope they do well, but we're gonna beat" Chevrolet this year in car sales.

Ford Division's worst showing was the Probe, with a 30 percent sales decline.

The Lincoln Town Car almost held steady with a 3 percent decline, but Continental sales fell 37.4 percent and Mark VII's sales dipped 31 percent.

Lincoln was more dependent on fleets than any other brand in 1991, with 62.1 percent registrations in rental or other fleet service, according to R.L. Polk and Co.

Stephen Lyons, general marketing manager for Lincoln-Mercury Division, says the 1993 Mark VIII and a soon-to-be-restyled Continental will give the nameplate a much needed boost.

"Ultimately, the Continental and the Mark VIII will be the cars to compete against the Japanese" luxury imports, Lyons said.

— Kathy Jackson

General Motors

Sales at Saturn orbited at new heights in the first quarter as the company ranked as the No. 14 car brand for the quarter, and No. 13 for March.

Elsewhere at GM, the biggest increase in sales and share was at Pontiac, which sold 8,751 more cars and 1,946 more trucks, raising its share to 4.6 percent. Sales of the new Bonneville and the Grand Am were up about 10,000 units each and Sunbird sales were down only 4,000 units, despite much lower fleet sales. The Grand Prix took up some of the slack from the discontinued Pontiac 6000, and even the old Firebird recovered. And sales of the Trans Sport were up significantly now that the minivan has a more powerful engine available.

GMC sold 10,268 more trucks as

▶

FIRST QUARTER SALES

year-to-date sales of all models were up from a year ago.

However, small pickups and sport-utilities and big vans were down in March.

Oldsmobile may be turning a corner. The old Cutlass Ciera was the division leader and the new Achieva was strong despite a late start.

Sales of the new Eighty Eight were better in the quarter than a year ago, but began slowing in March.

Buick — last year's shining star — saw its sales slip, largely because of the Park Avenue, Regal and Skylark.

The worst news was at Chevrolet, which had a quarterly sales loss of nearly 5 percent. Cavalier and Caprice sales fell like a rock.

— *Phil Frame*

Asians

More than half the Asian makes failed to better their marks from the war-torn first quarter of 1991.

Overall sales by the 12 Japanese divisions and Korea's Hyundai increased 1.2 percent, but because the market was up more, the Asians' share fell to 25.3 percent.

Toyota Motor Sales U.S.A. Inc. had a 13.6 percent overall increase, driven by a doubling of Lexus sales.

American Honda Motor Co. had a split decision. Acura was off, but the Honda brand held on to a 3.6 percent gain despite a significant decline in March of 13,317 units.

Sales at Nissan Motor Corp. in U.S.A.'s Infiniti Division rose 42.7 percent, while the Nissan Division slipped slightly.

Like Nissan Division, Mazda is looking forward to a new mid-sized sedan later this year. In March, Mazda topped Nissan in passenger car sales.

Mitsubishi had a tough first quarter, too. Even though it is selling a number of products that it didn't have last year, sales dropped 16.8 percent.

A big drop in fleet sales accounted for most of the decline in cars.

Kevin Ormes, vice president for sales at Mitsubishi Motor Sales of America Inc., said his company sold 11,908 fleet cars last year in the first quarter, and just 7,757 this year.

Hyundai added another down month to a growing string despite energetic marketing.

First quarter sales were off 18.5 percent in spite of the new Elantra compact, aggressive rebates and a two-year free-maintenance program for all its cars.

— *Kristine Stiven Breese*

Europeans

German luxury imports enjoyed a first-quarter sales recovery, but not Volkswagen, the volume leader.

Overall, European imports topped a disastrous first quarter last year by 2.1 percent, losing 0.1 points of share to the Big 3.

Volkswagen, the European make with most sales in the United States, fell 12.6 percent. Volvo, the No. 2 European marque, rose 1.7 percent and is just 1,342 cars behind Volkswagen. In March, Volvo outsold the German brand.

A year ago, Alfa Romeo was the only European that managed to improve in the first quarter, and it did so again this year, by 7.1 percent. Porsche improved 9.8 percent to 1,190, and Audi, a division of Volkswagen, jumped 48.8 percent.

Toyota's Lexus Division outsold each European in the first quarter. A year ago, Volvo, Volkswagen and Mercedes-Benz all sold more cars than Lexus.

Yugo sales, which were off 61.8 percent in the year-ago period, improved 86.3 percent to 1,412 units.

WATCH

New programs: Toyota, Subaru, Hyundai, Suzuki

ARLENA SAWYERS
Staff Reporter

Toyota Motor Sales U.S.A. Inc., Subaru of America Inc., Hyundai Motor America and American Suzuki Motor Corp. added fuel to the incentive fires with new retail and factory-to-dealer programs.

Programs for Toyota, Subaru and Hyundai expire June 2; Suzuki's plan runs through Aug. 3.

Also, Oldsmobile introduced a SmartLease on the Ninety Eight Regency that expires June 30.

Toyota is offering dealer incentives of up to $500 on 1991 and 1992 Tercel; up to $1,200 on 1992 Corolla; and up to $1,300 on 1991 and 1992 pickups. The payments are based on sales quotas.

Customer rebates and dealer incentives make up **Subaru's** program. Buyers of 1991 and 1992 Loyale sedans and wagons receive $500 rebates. Dealers earn from $500 to $1,500 on 1992 Legacy with payments depending on whether the vehicle was invoiced before or after Feb. 3. Also, dealers earn $1,000 on 1991 Legacy.

Hyundai customer incentives range from $1,000 to $2,000 on 1991 models and $500 to $1,500 on 1992 models.

Suzuki's customer rebates include 1991 and 1992 Swift, ranging from $400 to $1,000; and 1991 and 1992 Sidekick, ranging from $500 to $1,500.

With no money down, consumers can lease **Oldsmobile** Ninety Eight Regency sedans for $399 a month for 36 months.

CLASSES

NADA kicks off certification effort

continued from PAGE 3

A month before classes started, NADA sent pupils a set of training tapes and an instruction manual. But only a handful said they had completed the 12 hours of study needed to prepare for the classes.

Huebner described much of the instruction in the manual and on tapes as common sense.

And yet, most of the salespersons there were unable to answer acceptably some of the ethical questions posed to them in obviously loaded examples — such as the salesman who wanted $1,000 over sticker from a long-time customer even though the model was overstocked.

At first, trainer Deborah Mack had difficulty eliciting responses from the mostly seasoned group. But once she had raised the gate, a tide of pent-up emotions burst on everything from dealership operations to customer deceit.

Salespersons essentially argued that all's fair in sales and selling as long as it is legal. The buyer should beware.

"The bottom line is how much we make for the dealership and ourselves," said one participant. "When 30 days are up, you have to make your quota. If you don't sell, you don't eat."

Other participants said salespersons don't need their ethics overhauled. Instead, they assert customers should burnish their own ethics.

"Customers lie," said one salesman. "They will tell you their credit is good, forgetting to mention a bankruptcy or two. Nobody says anything about the customer's ethics, but we must change ours."

Salesmen said they are pushed and pulled by dealers and finance and insurance managers on one side, and customers on the other.

They contend dishonesty starts with manufacturers and trickles down to dealers and finally to themselves.

"If a Cavalier is advertised for $7,999, you had better load it up with extras or your head is on the chopping block," said one participant.

Another said price negotiations with customers preclude ethics: "It is our job to sell value. We should get sticker price for a car. I suggest that a customer pays over sticker price. Any other price devalues the car."

Said another: "I am honest but I still have to make as much as I can on a car. The worst thing you can do is admit the price is jacked up and start cutting."

What about honesty and full disclosure during the selling process?

"If the cars were perfect you could do it," said one participant."

The consensus: Honesty and full disclosure will put you out of business.

Salespersons said they often get conflicting signals from dealers and sales managers.

"Ethically, we should quote payments on a stripped vehicle to customers," said one participant. "But that cuts out the finance and insurance manager so we are told at sales meetings to quote loaded payments. You can always come down but you can't go up."

The program, which cost NADA $1 million and three years to develop, is designed to improve salespersons' professionalism and self-esteem. It hopes to convert salespersons into "transportation consultants."

For dealers, the sales certification program could help stop high salesperson turnover. The average dealership has an annual turnover rate of more than 50 percent, according to NADA estimates.

The program is open to salespersons, sales managers and dealers. The curriculum includes ethical and legal practices, selling techniques and consumer psychology. It combines home study with training seminars.

Tuition is usually shared by the dealer and the participant. But some dealers are underwriting the entire cost for employees.

Despite their lapses on questions of ethics, most of the salespersons truly believe they are honest even though they are sometimes cagey with customers.

But then again, it is their job to sell cars.

Mary Kelly, a saleswoman with Fairchild Chevrolet in Lakewood, Ohio, said she would never do anything that would conflict with her own moral standards.

"I will charge the top price for a car because that is what I am there for," she says.

"I work at a car dealership and I want to sell cars."

How would you answer this question?

This ethical issue is included in the National Automobile Dealers Association sales certification program. Salespersons are asked if there are any ethical issues at work and the action the salespersons should take.

"Susan has a loyal customer to whom she has sold several vehicles. Four years ago, she was able to get him a particular model that had just been introduced, was selling very well and was in short supply. The customer is now ready to replace that vehicle. He says, 'This car has been so good that I want another one just like it.' He has not seen that you have 30 units of the same model in inventory.

"The customer says, 'I remember that I had to pay list price last time, because there was so much demand for my car. I know that the new one will cost me a lot, but I'm counting on you to get me the best price you can.'

"As they begin to fill out the paperwork, Susan is considering what price to quote."

GM cries foul, seizes 732 cars

PAT MILTON
The Associated Press

PORT JEFFERSON, N.Y. — General Motors shut down a Long Island car dealership and seized $20 million in new cars after charging the owner duped the company out of $400 million in loans for non-existent autos.

The action against McNamara Buick-Pontiac of Port Jefferson Station began when GM filed a civil suit against its owner, John McNamara. The FBI is now investigating for possible criminal charges, a police source said.

Last Thursday, Suffolk County sheriff's deputies were still towing away vehicles and seizing auto parts and other assets. They also took computer and phone systems listed in a court order and notified service customers to pick up their cars immediately.

GM obtained a court order last week to close the dealership and remove 732 new vehicles.

In a civil suit filed in state Supreme Court, General Motors Acceptance Corp. accused McNamara of obtaining loans to finance vehicles that did not exist.

The suit charged McNamara received financing for "thousands of vehicles supposedly shipped overseas and that none or only a fraction of the vehicles existed."

McNamara falsified documents to make it appear the vehicles were real, court papers said. He was accused of diverting money from vehicle sales "to entities other than" GMAC, hiding assets and reneging on an agreement to disclose his financial and business transactions to GMAC.

McNamara did not return calls seeking a response to the allegations. Attorney J. Timothy Shea said McNamara had filed a motion opposing the seizure of his assets.

Lynda Koskinski, a GMAC spokeswoman in Detroit, declined to comment on the allegations.

In December, GMAC became concerned about the growing debt and began to suspect the vehicles did not exist, the court papers stated. GMAC secured promises for repayment and collateral, and began an investigation.

Justice Paul Baisley said in an order he was allowing the confiscation of assets to ensure the vehicles did not somehow disappear.

One of the dealership's customers, Nancy Vanek, was called to pick up her van, brought in for a 3,000 mile service check.

"I was so worried that I wouldn't get my van back," said Vanek. "But it's sitting in my garage right now, safe and sound." AN

U.S. AND CANADA CAR AND TRUCK PRODUCTION

'92 build passes 3 million

ANNE E. WRIGHT
Chief Statistician

U.S. and Canadian automakers assembled their 3 millionth vehicle last Monday, 13 days ahead of 1991.

March vehicle production in the United States and Canada topped the year-ago month by 26.9 percent. Cars increased 11.4 percent from the year-ago month and trucks rose 52.6 percent.

In the first quarter, U.S. and Canadian car and truck production was up 16.6 percent from 1991; cars were up 2.9 percent and trucks climbed 41.0 percent.

Last week's U.S. car production was estimated at 118,499, up 11.7 percent from the prior week and 24.4 percent from the year-ago week.

Year-to-date, U.S. car production is 1,531,880, up 2.3 percent from 1991.

Car production in Canada was estimated at 24,825 last week, virtually even with the prior week and up 24.2 percent from the year-ago week.

Canadian automakers have assembled 277,370 cars so far this year, down 2.5 percent from 1991.

U.S. truck production was estimated at 83,861 last week, a dip of 1.3 percent from the prior week but up 33.1 percent from the year-ago week.

So far in 1992, U.S. truckmakers have assembled 1,077,354 units, an increase of 32.1 percent from the same period one year ago.

In Canada, truckmakers' estimated production last week was 19,642, down 12.0 percent from the prior week but up 13.4 from the year-ago week.

March truck production in Canada was 99,869, the highest monthly production ever recorded for trucks in Canada.

Year-to-date, truck production in Canada is 322,129, up 45.0 percent from 1991.

The daily-build rate of cars and trucks in the United States and Canada was 49,365, an increase of 3.7 percent from the prior week and 26.2 percent from the same week in 1991.

Ford Motor Co. will begin building the Mercury Villager and Nissan Quest minivans this week at the Avon Lake, Ohio, facility. Job 1 for the Mercury Villager is slated for Tuesday, April 14. The first Quest is expected to be built the following day.

General Motors scheduled Saturday overtime last week at five truck facilities: Janesville, Wis.; Baltimore; Moraine, Ohio; Scarborough, Ontario; and Oshawa, Ontario.

Ford and Chrysler Corp. have no overtime or downtime scheduled this week.

In the same week one year ago, the Big 3 idled six truck and four car plants due to slow sales. Ford also reduced two truck plants to single shifts in the same week in response to sluggish sales. AN

EPA plans pollution trade

Firms buying electric cars may get smokestack break

MAX GATES
Staff Reporter

WASHINGTON — The government's air pollution chief says he wants to trade smokestack emissions for clean cars to help get electric vehicles on the road.

The plan could help the auto industry clear many of the hurdles that stand in the way of widespread use of electric cars and other alternative-fuel vehicles. By giving polluters incentives to invest in non-gasoline-powered vehicles, the EPA hopes to create a market for them and help drive down costs. Wider use among business fleets will help develop an infrastructure for delivering new sources of vehicle power and pave the way for consumer purchases.

"It's a way to make the economics (of alternative-fuel vehicles) work," said William Rosenberg, assistant administrator in charge of the EPA's Air and Radiation Division.

Under Rosenberg's plan, a polluter would be allowed to purchase a fleet of cleaner, alternative-fuel vehicles instead of putting more pollution controls on a smokestack. Or an electric utility might buy batteries for electric vehicles and rent them to the cars' owners. That would make the cars more affordable, and the utility could receive credits for emission reduction.

Rosenberg is in charge of carrying out the 1990 Clean Air Act. In addition to mandating tighter tailpipe controls on all cars in the 1994 model year, the law will require that 150,000 cars annually in California run on reformulated gas or alternative fuels starting in 1996. It also carries clean-fuel mandates for fleets in the nation's 24 smoggiest cities.

Separate rules in California will require progressively tighter controls on emissions. The most stringent phase begins in the 1998 model year, when 2 percent of each maker's fleet must be zero-emission vehicles.

Automakers argue that they have to build the cars, but there is no guarantee that people will buy them. Rosenberg says his plan addresses that problem by giving companies an incentive to put large numbers of alternative-fuel cars on the road. With that, costs will be lower, the infrastructure more advanced and the transition to consumer purchases smoother.

The plan is part of a larger effort to create

Allante price climbs 4.9%

DETROIT — The 1993 Cadillac Allante roadster will carry a sticker of $59,975, up 4.9 percent from $57,170 for the 1992 version.

The 1993 model, which goes on sale April 23, will feature Cadillac's new four-camshaft, 32-valve, 290-horsepower Northstar V-8 engine.

The car is rated at 14 mpg city and 21 mpg highway, subjecting it to a $1,700 gas-guzzler tax. The tax is not included in the sticker price. The gas-guzzler tax was $1,300 on the 1992 Allante.

An Allante will pace the 76th Indianapolis 500 May 26.

Chevy revises incentive plan

Chevrolet's customer rebate program, which was to expire May 4 on 1991 models and June 4 on 1992 models, has been revised for the second time since it was announced in late January.

Cadillac and American Isuzu Motors Inc. announced new incentives on their vehicles, and Ford Motor Co. wants to put college graduates on the road with a new incentive program.

Chevrolet's customer rebates range from $500 to $1,000 on 1991 and 1992 cars and from $400 to $1,000 on 1991 and 1992 trucks.

The following rebates

Smith makes export sales a GM priority

PHIL FRAME
Staff Reporter

General Motors is expected to quickly impose export sales priorities on North American Operations and consolidate some segments of domestic and overseas operations as part of its new fitness regime.

Company insiders now say new President John F. "Jack" Smith Jr. is unlikely to name a successor to assume overall coordination of the international operations. Smith was vice chairman in charge of international operations when the job of slimming North American Operations was handed to him by the GM board two weeks ago.

Besides eliminating a layer of management, this structure assures

Jeep dealers fume over mix, shortage of transmissions

MARY CONNELLY
Staff Reporter

Chrysler Corp. and its Jeep-Eagle dealers are squabbling over the mix of old-to-new Jeep Cherokees because a Japanese supplier cannot build enough automatic transmissions to meet demand for the popular sport-utilities.

It is a frustrating situation for Chrysler, which underestimated the popularity of the 8-year-old Jeep Cherokee that is being sold alongside the new 1993 Jeep Grand Cherokee.

Just as Chrysler is unleashing a megawatt advertising campaign for the Grand Cherokee, Jeep-Eagle dealers are asking the company to build more old-style Cherokees.

Some Jeep-Eagle dealers have protested to Chrysler officials the company's decision to reduce production of the "classic" Cherokee as it ramps up the build of the Grand Cherokee.

Jeep dealers are clamoring for more Cherokees because, in the midst of a sluggish economy, sales are skyrocketing. Sales in the first three months of the year were up 55 percent over 1991.

Dealers say demand for the sport-utility remains strong despite the entry of the Grand Cherokee.

"The 8-year-old Cherokee just had its best January in two years, its best February in four years and just missed having its best March ever," Lawrence Baker, Jeep-Eagle general manager, said at the New York auto show last week.

U.S. sport-utility sales are strong. Sales in the segment were up 13 percent in the first three months of 1992 compared with one year ago. Sales of the Ford Explorer were up 27 percent in the same period.

But Chrysler can do little with its unexpected showroom star.

Chrysler cannot meet dealer demand for the Cherokee because of a shortage of the four-speed automatic transmission used in both the Cherokee and the Grand Cherokee.

GMAC can't explain loss in $436 million floorplan

EDWARD LAPHAM
Managing Editor

General Motors Acceptance Corp. wants to know how its internal controls broke down and allegedly allowed a Port Jefferson, N.Y., dealer to defraud the finance company of $436 million in a complex, phony floorplan scheme.

At the same time, the financing arm of General Motors is trying to reassure dealers and investors that the alleged duping by dealer John McNamara amounts to a one-time, non-recurring loss.

Although GMAC officials eventually uncovered the scheme, in-

Yugo America vanishes

JIM HENRY
Staff Reporter

NEW YORK — Yugo America Inc., named after a country that no longer exists, quietly shut off the lights, locked the doors and filed for Chapter 7 bankruptcy last week.

Yugo said it was withdrawing from the United States, and what assets it has will be sold to raise money toward paying its millions of dollars in debts.

Ray Potts, the Yugo and Peugeot manager at Ken Smith Motors (Yugo-Peugeot-Lincoln-Mercury) in Ridgewood, N.J., said he called on Yugo America last week, only to find the headquarters office in Upper Saddle River, N.J., locked. He said the only activity was a truck hauling a load of parts away from the adjoining Yugo warehouse. The warehouse appeared to him to be empty.

Potts said that a week earlier, a Yugo executive warned him Yugo was in "very grave" con-

expire April 30: 1991 Astro, $400; 1992 Astro, $500; 1991 and 1992 C/K pickup extended cab, $400; and 1991 and 1992 G-Van upfit, $1,000.

Rebates of $750 to $1,000 on the 1992 Geo Tracker and $1,000 on the 1992 Geo Metro convertible have been extended through Sept. 23.

Rebates on other Chevrolets expire May 4 on 1991 models and June 4 on 1992 models. In lieu of rebates, consumers may choose 6.9 percent financing for 12- to 48-month contracts.

Cadillac is paying customer rebates of $1,500 on the 1992 Brougham and the 1992 DeVille until June 30.

Through June 30, Isuzu is paying consumer or dealer rebates (dealer's choice) in California and its Southwest region and dealer incentives everywhere else.

The incentives range from $600 to $2,500 on 1990-92 cars; $500 to $1,500 on 1990-92 pickups; and $500 to $1,250 on 1990-92 Rodeos. There is a rebate of $750 on 1990-91 Troopers.

The incentive tables appear on Page 38.

Nissan recalls 33,000 vans

CARSON, Calif. — Nissan Motor Corp. in U.S.A. is recalling about 33,000 of its 1987-90 vans to repair a cooling system flaw that could result in a fire.

Nissan said a failure in the cooling system could allow coolant to spray on the exhaust manifold, which could cause a fire in the engine compartment.

Production of the van ended in 1990. The recall does not include the Axxess minivan.

5-series wagon debuts in June

NEW YORK — BMW of North America will begin selling its 525i Touring wagon in late June for $38,600.

The price is $3,000 more than the 525i sedan, upon which the new wagon is based. Karl Gerlinger, president and chief executive officer, said BMW hopes to sell 5,000 to 6,000 a year.

Gerlinger said the car is aimed at drivers of minivans or sport-utilities who would sacrifice some space for a sportier driving experience.

The wagon — BMW prefers not to call it a station wagon — shares the 525i sedan's basic chassis, powertrain and exterior dimensions except height.

— *Jim Henry*

Nield retiring from AIAM

WASHINGTON — George Nield, president of the Association of International Automobile Manufacturers for 21 years, will retire Oct. 1.

An engineer by training, Nield, 67, has seen the staff organization grow from three to 16. For years the association served primarily as a conduit for getting U.S. engineering requirements to its 17 European and Japanese automaker members. That changed recently, "when the trade issue reared its ugly head," Nield said.

The association is getting ready to review possible successors, Nield said.

Nield plans to travel and spend more time flying his Cessna 210. "I'm crazy about flying, but the only chance I had was on business trips," Nield said. "Now I'll do it for enjoyment."

— *Max Gates*

TV ads debut for new Jeep

Chrysler Corp. launched its 1993 Jeep Grand Cherokee with prime time TV spots that show off the sport-utility's all-terrain ability in locales around the world.

During yesterday's 8:30 p.m. and 10 p.m. commercial breaks on network and major cable TV stations, viewers saw one of five 30-second spots created for the campaign by Campbell-Mithun-Esty, in Southfield, Mich.

The Grand Cherokee is shown rolling along snow-covered mountains, deserts, rain forests and canyons.

The campaign also includes print and radio spots.

Ford cash helps disabled

DEARBORN, Mich. — Ford Motor Co. is paying $750 to offset installation costs for adaptive driving equipment or wheelchair lifts on new Ford, Lincoln and Mercury cars and light trucks.

The Mobility Motoring program, announced last week, is retroactive to Feb. 15. It ends Sept. 30.

Ford opens recycling center

DEARBORN, Mich. — Just in time for Earth Day, Ford Motor Co. will unveil a major recycling center April 21.

The center, near Ford headquarters, will be capable of processing 50,000 tons of refuse annually and will serve 50 Ford Michigan locations.

Ford officials say the center will reduce the amount of waste sent to local landfills by 50 to 70 percent and save 1 million trees per year.

Alfa account in review

Fiat is reviewing the $45 million Alfa Romeo advertising business across Europe, reports *Advertising Age*.

This is the final phase of an ambitious realignment of the Italian automaker's $565 million European advertising budget.

Alfa Romeo is currently split between WPP Group-owned Conquest Europe of Milan, which handles the business in 11 countries, and BBDO Worldwide, which has Alfa Romeo in Spain and shares the Italian account with Conquest.

An executive familiar with the review said four or five agencies, including both incumbents, have been invited to pitch.

— *Crain News Service*

briefly

Some guys never grow up

If anyone knows that rank has its privileges, it's **Chrysler Corp.** Chairman Lee Iacocca. Iacocca's latest perk is the first production model of the V-10 Dodge Viper. "VIN number one I got," Iacocca said at the New York auto show last Wednesday. "I get it Friday and to hell with the rest of you."

SAY THAT AGAIN? Iacocca has found a new role for himself after he steps down as **Chrysler** chairman Dec. 31. Speaking at the New York show last week, he noted that Robert Eaton will soon take over the day-to-day running of the company. "Then I can really devote time to the trade issue," Iacocca said. Can the war of the words escalate much more?

SHO GOES AUTOMATIC — Taurus SHO enthusiasts are eagerly awaiting their first convention this summer, where they'll get a glimpse of a 1993 SHO prototype. Bill Staib, editor of the *SHO Registry,* says the 1993 model year will include a SHO automatic for the first time, a model he has test driven near the Taurus plant in Atlanta. Staib says the SHO automatic is "real responsive, definitely peppy." He says the automatic has a little less horsepower than the manual but more torque. The convention will be held July 16-19 in Peoria, Ill.

FAMILY FEUD — The sailboat battle for America's Cup is down to the semifinals, pitting Cadillac vs. Chevrolet. Cadillac is a sponsor of Dennis Conner, the perennial sailboat champ, and his *Stars & Stripes.* Chevrolet's Corvette is the official car of *America3,* the Bill Koch entry. While New Zealand and Italy battle to be the challenger, the U.S. boats battle for the right to defend. Says a Chevy spokeswoman proudly: "Whoever wins, a GM division will be backing the American defender."

NEW DIGS — Gerald Greenwald didn't get the job as the next chairman of **Chrysler.** But the one-time heir apparent to Chrysler boss Iacocca has landed new employment. Greenwald is the new president of Toronto-based real estate giant Olympia & York Developments Ltd., the biggest commercial landlord in North America. Greenwald won't have to worry about placing names with faces. Former Chrysler Vice Chairman Robert S. "Steve" Miller Jr., now an investment banker, is leading Olympia's restructuring talks with its bankers.

THE GOOD OL' DAYS — The 15-member board of directors that **General Motors** shareholders will elect next month includes only five who can be considered "insiders." Three are officers of the company (Chairman Robert Stempel, Vice Chairman Robert Schultz and President Jack Smith); one is an alumnus (Roger Smith); and one occupies the "Fisher Body seat" (Detroit banker Charles T. Fisher III). Compare that with the board that greeted Frederic Donner when he became chairman in 1958. The board had 35 members; 12 were GM officers, 11 were retired officers and four represented the duPont family, which owned 23 percent of GM's common stock. John Smale's palace revolt wouldn't have had a chance in those days.

Smale: good timing

GMC splits light, medium field sales

JOSEPH BOHN
Truck Editor

SAN FRANCISCO — GMC Truck is restructuring its field sales operations, primarily to increase the competitiveness of its medium-duty dealers.

Hurd

The reorganization includes splitting light-duty truck sales and service operations from medium-duty operations and creating separate staffs, said Ray Rota, GMC general sales manager, at the American Truck Dealers convention.

GMC has 2,398 light-duty dealers and 648 medium-duty Chevrolet and GMC dealers for whom it handles marketing.

GMC's light-truck sales totaled 71,228 in the first quarter, up 16.8 percent from a year ago. Its light-truck order backlog is the highest in five years.

The division has requested an additional 20,000 units for the 1992-model buildout period, Rota said. But sales gains in the soft medium-duty market have been harder to come by.

Despite increasing its medium-duty market share to 31.2 percent in the first quarter from 22.8 percent a year ago, GMC's medium-duty sales of 30,881 were barely ahead of last year.

GMC wants to increase production at the Janesviile, Wis., plant at a time when it faces stiff competition from Freightliner Corp., Ford Motor Co. and Navistar International.

It will do so partly by adding new products at Janesville, such as the "GP" chassis, going into production in August. General Motors plans to produce 8,000 to 10,000 of the new chassis annually.

But dealers are still the key to its competitiveness. In its reorganization, GMC will move a large number of telemarketing people from its headquarters in Pontiac, Mich., into the field to provide dealers with more direct factory contact and support.

One account executive will be assigned to every 25 or 26 medium-duty or light-duty dealers, under the reorganization that begins May 1. Rota anticipates it will be completed by June 1.

On the medium-duty side, James Hurd, currently GMC sales manager of fleet operations, will be named medium-duty sales and service manager, effective May 1. His group includes 45 people.

Hurd will report to Rota. Reporting to Hurd will be two regional managers: Greg Rice, currently manager of dealer operations, who will be named regional manager, medium-duty West, and Al Tandrup, currently GMC Northeastern zone manager, who will become regional manager, medium-duty East.

Tandrup will handle 14 geographic areas, and Rice will handle 11.

On the light-duty side, Jack Kehl, GMC sales manager for the Eastern United States, will be named assistant general sales manager East.

Larry Rickard, GMC sales manager for the Western United States, will be named assistant general sales manager West. Both report to Rota.

Rickard

Kehl

GMC will create six "super zone" offices to handle light-duty sales. Thomas Carpenter will be named manager of the Northeast zone in Parsippany, N.J. Donald Buechler will head the Midwest zone office in Chicago.

Robert Hatcher will head the Central zone oifice in Denver. Steve Pottenger will head the Southwest zone office in Dallas. Lynn Pew will head the Pacific zone office in San Francisco.

The Southeast zone manager has not been named. He will be based in Atlanta.

Execs' pay dips at GM as red ink gets deeper

PHIL FRAME
Staff Reporter

DETROIT — General Motors confirms that its top executives made less money last year because the company lost $4.5 billion.

But don't pine for Chairman Robert Stempel because his compensation based on 1991 performance fell $444,000 from the year before, to merely $1 million. He also received about $1.1 million during 1991 that had been deferred from previous years' earnings.

All of GM's top five officers made one-quarter to one-third less last year than in 1990. Over the past two years, when GM lost $6.5 billion, compensation for the top five fell from 44 percent for Stempel to 51 percent for Alan Smith, executive vice president.

Their fortunes were buoyed in 1991 because a portion of the compensation they earned in good years was paid to them last year.

Besides his $1 million 1991 salary and the $33,000 company contribution to his savings-stock purchase program, Stempel's W-2 form for last year also reflected receipt of $575,000 in bonus attributable to 1986 to 1990 performance and $519,402 in stock awarded to him in 1988 and 1989.

GM paid no bonuses and made no new stock awards to its top five officers in 1991.

The company did give the executives new stock options last year, but those do not have real value until they are exercised. The option price was $40 per share; GM common was closed at $39.88 per share last Wednesday. The options expire unless they are used within 10 years and cannot be used until Aug. 5 this year.

Despite the compensation cuts in 1991, the UAW said the GM executives' pay was "way out of line."

"GM's losses have obviously tempered the most extreme increases in GM executive compensation," UAW President Owen Bieber and Vice President Stephen Yokich said in a joint statement.

"Still, the generous compensation being paid to the company's top officials is excessive, especially when you consider the pain inflicted on workers and communities by the misguided decisions and ineffective leadership of GM's executives," the UAW officials said.

The UAW said the generous compensation paid to GM officials is excessive when you consider the pain inflicted on communities by misguided decisions.

The executive pay was revealed in the company's 1992 proxy statement for the annual meeting on May 22 in Fort Wayne, Ind.

The proxy also reflected the shakeup of GM's board and top management two weeks ago, when then-President Lloyd Reuss was deposed and he and Alan Smith were removed from the board of directors. In addition, Chief Financial Officer Robert O'Connell was demoted to senior vice president.

Reuss was demoted and replaced as president by John F. "Jack" Smith Jr., who had been vice chairman in charge of international operations. O'Connell, who was replaced as chief financial officer by Executive Vice President William Hoglund, becomes chairman of General Motors Acceptance Corp. next week.

In the proxy, no management candidates were nominated for the board seats vacated by Reuss and Alan Smith. The removal of Reuss and Alan Smith chops the GM board from 17 to 15 members and cuts management's influence.

Only three GM executives are board members — Stempel, Jack Smith and Vice Chairman Robert Schultz. Other board members considered to be in the insider category are former chairman Roger Smith and Charles Fisher, a member of the Fisher Body family.

STOCK OPTIONS GRANTED IN 1991

Bieber: Caterpillar didn't beat union

LIZ PINTO
Staff Reporter

DETROIT — UAW President Owen Bieber denied last week that Caterpillar Inc. had defeated the union when the UAW ended a five-month strike and returned to work and the bargaining table.

"We agreed to recess the strike and acquiesced to the mediator's request, which brought people back into the plant," Bieber told the Automotive Press Association.

But Bieber said the UAW "will keep the pressure on" as talks continue and that the union "reserved the right to use any means it saw fit" to accomplish its goal at the contract talks.

Caterpillar had threatened to begin hiring replacement workers when the UAW decided to return to work.

FIGHTING THE PATTERN

The UAW has been insisting that a Caterpillar contract follow a national pattern, and the company has insisted on breaking the pattern.

Thousands of workers reported back to their jobs last Wednesday, only to be told by Caterpillar not to report to work until today.

"This was a stunning blow to the UAW, which has been thought of as one of the largest, most powerful unions in the world," said Dan Polsby, a labor expert and law professor at Northwestern University in Chicago.

Polsby said the UAW's capitulation will send shock waves through unions, particularly because Caterpillar withstood the union's insistence on a contract patterned after one reached with farm-equipment manufacturer Deere & Co.

The union is expected to seek pattern bargaining in negotiations with the Big 3 next year.

"The core companies are in a greatly strengthened position now, with the principle of pattern bargaining gone," Polsby said.

IMPORTANT SHOWDOWN

The showdown represented the first time a major industrial company has tried to break a union of the UAW's size and strength by threatening to replace employees with non-union workers.

Bieber said the union would work hard to promote passage of a bill currently in the Senate that would make the hiring of permanent replacements for striking workers illegal. The bill has already passed through the House of Representatives.

Polsby said the Big 3 will view Caterpillar's strategy as a "test case" in negotiations with the UAW next year.

The Associated Press contributed to this report.

Voyager spurs Chrysler export sales; 1st quarter jumps 17%

HIGHLAND PARK, Mich. — Chrysler Corp. said last week that export sales in the first three months of 1992 rose 17 percent from a year earlier as Voyager sales in Europe nearly doubled and demand rose sharply in Taiwan and the Middle East.

Chrysler said worldwide export sales rose to 16,017 units in the quarter, and March sales rose 11 percent to 5,622. European sales of the Voyager alone totaled 5,380 in the first quarter and 2,022 in March, up 52 percent from a year earlier, Chrysler said.

"In spite of a soft European market, Voyager sales continue to increase," said Joseph Cappy, vice president international. A small number of Voyagers are being produced at Chrysler's joint-venture plant in Graz, Austria, and capacity there is scheduled to rise to about 35,000 units a year by next year.

Chrysler said first-quarter sales in Taiwan rose 189 percent from a year earlier to 2,182, and Middle Eastern sales rose 12 percent to 2,467.

Separately, the company said Chrysler and Synghelides S.A. have launched Chrysler Jeep Hellas S.A. to distribute Jeep products, Dodge Dakota pickups and Voyagers in Greece.

Passenger cars will be added to the lineup in 1993, Chrysler said.

how to revive a brand. Just look what GM has done to revive Pontiac, Buick and Cadillac. It just takes interest and determination, and those are two qualities that Iacocca and his team apparently lack.

When I hear the name Plymouth, I think of excellent automotive value with conservative but attractive styling.

When I hear Eagle, I think of a chain of discount clothing stores. And at least Plymouth does not have a model named after a brand of zippers.

But who am I to complain? I am just a small stockholder and a loyal Plymouth owner. Not the type of person to interest the executive whizzes at Chrysler.

I hope that as Iacocca departs the chairman's office in December, Robert Eaton will toss all that ridiculous Albatross (er, Eagle) baggage after him.

Little 3 arrogance is the big problem

I think the domestic automakers' problem is "Little 3 arrogance."

The degree of corporate arrogance they display is unbelievable. If you have ever worked for one of them, owned one of their dealerships or talked to a mechanic at the dealerships, you will discover that the companies will not listen to anyone because *they* know it all.

After all, who are those stupid traitors who buy foreign cars, demanding what? Quality? Well, they are hard-working Americans who realize that money is hard to find and who want a car that lasts longer than two or three years.

None of the three have discovered that they are in the people business. It is always smart to take swimming lessons after you drown.

Rewriting pacts isn't an easy job

Automotive News should be commended for its series on the service contract tax situation. You have clearly and fairly presented the facts, in my view.

Your March 16 editorial ("Bush must halt IRS tax grab on service contracts") is correct and does a great service for the entire automobile industry.

It is disturbing that certain individuals in the industry have misled dealers by saying that "all the warranty companies have to do is rewrite the contracts, make themselves the obligor and the dealers' problems will be over."

Most states do not allow that practice and will issue "cease and desist orders" when that type of contract appears.

Certain other states have taken a passive interest or do not have the resources to regulate service contracts.

However, when administrator-obligor programs begin to appear, I believe many more states will enforce restrictions.

The administrator-obligor programs are living on borrowed time.

Europe up 1% in first quarter

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Despite weakness in two major markets, Germany and Britain, Europe's new-car sales in the first quarter rose 1 percent over a strong period last year.

According to *Automotive News* estimates, sales in the 17-nation market rose to 3.75 million units from 3.71 million a year earlier, despite declines of 2.8 percent in Germany and 11 percent in the United Kingdom. Germany is Europe's largest market; the United Kingdom is fourth.

March sales slipped 1.5 percent from 1991, to 1.34 million, as demand fell 3.1 percent in Germany and 15.3 percent in Britain.

Analysts said continuing weakness in Germany and Britain is being offset by gains in Italy, France and Spain as consumers in those countries shake off their recessionary moods.

"Italy, again, has defied the pundits and remains remarkably strong," said Arthur Maher, who follows the industry for DRI/Europe in London. "The outlook remains favorable for it to come in above 2.3 million units again this year."

Maher also expects a second-quarter upturn in France, Europe's third-largest market, where first-quarter sales rose 1.4 percent to 521,500. An expected 3.5-point cut in the value-added tax, to 18.6 percent, should boost sales to 2.1 million for the year, Maher said.

First-quarter sales in Spain were jump-started by a reduction in the value-added tax to 28 percent from 33 percent. Sales rose 28.2 percent in the first three months, to 268,500.

The big question mark for the year will continue to be Britain, now in the third year of a severe downturn, Maher said.

"April will be a telling month, but the U.K. market will have to struggle to reach 1.7 million units this year" from 1.55 million in 1991, he said.

Among the top six carmakers, Volkswagen Group sales rose 2.2 percent in March, to 228,700, as the company boosted its market share to 17.1 percent. VW says it has a six-week order backlog for the new Golf III.

General Motors edged out Fiat Auto for second place in March, with a 12.4 percent share of market, although sales slipped 1.5 percent from a year earlier, to 165,400 units.

Thomas Mason, vice president of sales and marketing for General Motors Europe, said March's momentum could not be maintained for the entire year.

"We haven't got the capacity to keep the (No. 2) spot, and it has not been an expectation or a target for us. Our target is to operate at or close to capacity and to be profitable," Mason said.

Fiat slipped to third place in March with 12.1 percent of the market. Sales declined 5.8 percent, to 161,100. Fiat's home-market sales slid 25 percent from a year earlier.

Ford of Europe continued to suffer in March because of its reliance on the United Kingdom, its home market. The company's sales fell 5.8 percent last month to 158,200 cars.

Both French automakers had good monthly and quarterly figures, benefiting from new products and the revival of their home market. Peugeot Group sales rose 4.1 percent in March from a year earlier, to 156,100, for an 11.7 percent market share. Renault SA sales rose 8.6 percent last month to 146,400 cars, and an 11 percent share. Ford sets $2.7 billion for truck projects

KATHY JACKSON
Staff Reporter

Ford Motor Co. will invest $2.7 billion in the next three years to enhance its truck lineup.

Nearly $1 billion will be spent to re-equip the Oakville, Ontario, assembly plant near Toronto to build a new front-wheel-drive minivan based on the Taurus platform. Production is slated to begin in January 1994, and the van will be sold by Ford Division.

Another $1 billion will go to equip the Windsor Engine Plant No. 2 in Windsor, Ontario, for the production of a new truck engine, beginning in 1995.

The company will spend $650 million to expand and equip the Kentucky Truck plant in Louisville, Ky., for production of F-series pickups. Louisville also will continue to produce Ford's medium- and heavy-duty trucks.

"With the future growth potential of the North American light-truck market, we want to ensure that we have product and production plans in place that will allow Ford to solidify its position," Ford Executive Vice President Alex Trotman said in a statement.

The debut of the fwd minivan for Ford Division will bring to three the number of minivans offered by Ford Motor Co. The rear-wheel-drive Ford Aerostar was introduced May 31, 1985, as a 1986 model. The all-new front-wheel-drive 1993 Mercury Villager will be in dealer showrooms in July.

Bill Van Gall, president of Canadian Auto Workers Local 707 in Toronto, said Job 1 for the new minivan is scheduled for January 1994. He said the vehicle will be larger than the Villager but similar in style and will have a 3.8-liter V-6 engine.

"This announcement by Ford contradicts negative reports that Ontario is not a good place to do business," Van Gall said. The Ontario government is studying legislation that will make it less cumbersome for workers to join unions. Critics say that will chase business away.

Production of the new minivan will add about 400 jobs at Oakville. One shift at the nearby Ontario Truck Plant will be eliminated in November 1993. Those 700 jobs will go to Oakville along with the 400 new positions.

Trotman said Ford will continue production of the Aerostar along with the new minivan. For 1992, Aerostar received a new grille, flush aero headlights, a car-like instrument panel and a driver-side airbag.

Aerostar sales through March totaled 36,034, compared with 31,576 at the end of March last year.

But workers at the St. Louis assembly plant, sole source of the Aerostar, are worried.

"Our sales are pretty good right now," said John Sherlock, president of UAW Local 325. But he said the union is not confident that Ford will keep both products in the marketplace.

"It's a big concern," Sherlock said, "but there are very strong rumors we will get another product." The rumor, Sherlock said, is that St. Louis also will produce the hot-selling Explorer sport-utility.

Through March, Explorer was the fifth best-selling vehicle in the United States with 71,149 deliveries, up from 55,668 at the same time last year.

St. Louis has 2,400 hourly and 225 salaried workers.

Ford's investment will mean additional jobs in both Kentucky and Windsor. Trotman said employment at the Kentucky Truck plant could increase by 1,300 when the plant reaches full production in 1995.

He said an additional 850 workers will be needed to build the new truck engines in Windsor.

Ford is the No. 1 light-truck seller in the United States. Through March, dealers had delivered 303,059 light trucks, up from 261,730 last year.

Ford's light-truck market share increased to 30.2 percent in the first quarter, compared with 28.6 percent for the first quarter of 1991. ■

Dealers get add-ons with new Jeep

Parts, service issues get early attention

DALE JEWETT
Service Editor

Chrysler Corp.'s platform team system has given Jeep dealers several profit-building accessories to go along with the new Grand Cherokee.

For Chrysler, the accomplishment is another part of its strategy to increase customer satisfaction via the parts and service business.

Previously, the availability of dealer-installed accessories at the the launch of a new vehicle would happen only by accident, said Mykle Jacobs, general manager for service and customer satisfaction.

Accessories for the Jeep Grand Cherokee include aluminum brush guards, ski carriers, bicycle racks and compact disc players.

"They're out as we speak," Jacobs said. "In the old days, they might not have been out for a year."

And those benefits will accompany the rest of Chrysler's new products, including the 1993 mid-sized sedans code-named LH that debut this fall.

The platform team process also gave greater consideration to the service and parts needs of the Grand Cherokee much earlier in the design process, said Gerald Blake, general manager of Mopar Parts.

"It was a real boost to our comfort level, knowing long before the vehicle was out that we can service it," Blake said. "We were not waiting for prototypes before beginning our work.

"We see the quality and general launch of the ZJ as a victory for the platform team," Blake said. "The quality level of this vehicle is outstanding — that's a tribute to the whole group."

Among the special service considerations was the use of environmentally friendly 134a refrigerant in the Grand Cherokee's air conditioning system.

Use of the new refrigerant requires dealers to buy new service tools and refrigerant recovery equipment and to retrain their technicians.

The platform team system give dealers a head start on training before the launch, Blake said. ■

Seven states enact crash parts laws

HELEN KAHN
Senior Correspondent

In 1991, seven states passed legislation dealing with the use of aftermarket crash parts made either by the original vehicle manufacturer or independent maker.

Arkansas: Provides for disclosure of any non-original equipment manufacturer aftermarket crash part made or supplied for use in the state on or after Jan. 1, 1992; requires disclosure of when non-OEM part is used in preparing estimates for repairs. Approved April 10, 1991.

Georgia: Tells the Commissioner of Insurance to provide procedures for settling property damage claims under private passenger vehicle policies including use of aftermarket parts. Approved April 17, 1991.

Indiana: Requires insurers to give policy holders a chance to indicate in writing approval or disapproval of use of new OEM, new non-OEM or used crash parts before telling a body shop to repair a vehicle during its six model years. Signed into law on April 25, 1991.

Michigan: Provides that starting Feb. 1, 1992, if an insurance company requests the use of non-OEM crash parts to fix a vehicle it insures, a repair shop may use non-OEM parts but must disclose that use to a policy holder. Approved Dec. 5, 1991.

North Carolina: Forbids any insurance company to specify a repair or service operation or company as a condition for paying a claim. Effective June 24, 1991.

Oklahoma: As of Sept. 1, 1991, non-OEM crash parts must disclose identity of manufacturer; forbids insurance companies from specifying non-OEM crash parts and permits use of non-OEM parts by repair shops only if the customer gets written notice of their use; if a repair facility uses non-OEM parts, it must identify them in a written estimate and a disclosure statement. Approved May 7, 1991.

Texas: As of Sept. 1, 1991, auto insurance policies cannot specify the brand, type, age or condition of parts or products used in repairing motor vehicles; gives consumers freedom to choose repairer or repair facility; insurance firms must disclose limitations on policies to consumers and consumers must consent to them in writing when they buy policies. Approved June 6, 1991. ■

Service business falls in Feb.

DETROIT — After starting the year on a positive note, parts and service business at new-car dealerships declined slightly in February.

Repair business in February was 97.6 percent of that recorded in February 1991, as calculated by the Automotive News Service Index. The year-to-year index was 102.2 percent in January.

For the first two months of this year, service business was virtually unchanged at 99.9 percent of that for the same period in 1991.

The biggest change in February was a 4.4 percent drop in total labor sales. Declines also were noted in gross profit on all labor and parts and accessory sales, off 1.6 percent, and sales of all parts and accessories, down 1.5 percent.

Repair orders written rose a slight 1.1 percent, and shop parts sales gained 0.1 percent.

For two months, shop parts sales were up 2.2 percent, and sales of all parts and accessories rose 1.3 percent. Conversely, total labor sales were off 2 percent.

Among the reasons dealers cited for the change in service volume:

- "The main reason for the increase in sales and gross would be a higher labor rate and a different price matrix in parts. The labor rate is $3 an hour higher than it was in February 1991."
- "More repair orders written; however, not a higher gross due to discounting, promos and more warranty work."
- "We have noticed a decreased volume of labor sales, due mainly to smaller repair shops in our area with less overhead, which allows them to perform repairs at a lower price to the customer. That also accounts for the increase in total parts and accessories sales, since most of those shops purchase parts from us over the counter at a wholesale price."
- "Business decreased due to fewer units in operation, thus fewer repair orders. Also, fewer new-vehicle sales result in fewer accessories being sold."

Figures used in the Service Index are compiled from a cross-section of new-car dealerships. ■

SERVICE INDEX
97.6*

	Feb. '92 vs. Feb. '91	Jan.-Feb. '92 vs. Jan.-Feb. '91
Gross Profit on All Labor and P&A Sales	− 1.6%	− 0.4%
Repair Orders Written	+ 1.1%	0.0%
Total Labor Sales (Customer & Warranty)	− 4.4%	− 2.0%
Shop Parts Sales (Customer & Warranty)	+ 0.1%	+ 2.2%
Sales of All P&A	− 1.5%	+ 1.3%

* Survey by Automotive News shows that dealers' service and parts business in February 1992 was 97.6 percent of business in February 1991. Service business in 1992 was 99.9 percent of business in the corresponding period in 1991.

in brief

SERVICE

Trouble Shooters can win grants

ORLANDO, Fla. — More than $1.1 million in scholarships will be available to the winners of state finals in the 1992 Chrysler/AAA Trouble Shooting Contest.

The written portion of the state contests concluded March 28. State "hands-on" competitions began April 16.

The national finals are scheduled for June 15 at the Chrysler Technology Center in Auburn Hills, Mich.

Thirty-eight member schools of the Career College Association offer tuition scholarships to state championship teams. Both members of the two-person championship team from every state will qualify for a $3,000 to $13,500 scholarship.

The scholarships cover motor-vehicle service courses ranging from six-month certificate programs to two-year associate of applied science degree programs. More than 10,000 high school seniors throughout the nation are participating in the contest.

Meijer to chair ASA board

BEDFORD, Texas — Pieter Meijer, owner of Continental Motors in Santa Barbara, Calif., has been named 1992 chairman of the Automotive Service Association board of directors. He succeeds Gary Spear.

A 17-year veteran of the auto service industry, Meijer has been an association member since 1974.

Coin markets electronic catalog

ATLANTA — Coin Dealership Systems is marketing an electronic parts catalog system.

Called the EPC100, it is available for General Motors, Honda and Acura dealerships. It uses a personal computer and compact disc read-only-memory storage to store and display manufacturers' parts catalogs.

Finalists picked in service contest

LEESBURG, Va. — Three finalists in the automotive service technology International Youth Skill Olympics trials have been selected.

Matt Carr, 20, of Pocatello, Idaho, Michael Nugent, 20, of Vero Beach, Fla., and David Stapinski, 20, of Bethlehem, Pa., will participate in the finals at the National Automobile Dealers Association convention in New Orleans next February.

The winner will join the United State team sponsored by the Vocational Industrial Clubs of America at the international competition in Taipai, Taiwan, in 1993.

Contestants had to demonstrate proficiency in gasoline engine tuneup, diesel engine service, car electrical, rear axle and body electrical, steering and wheel alignment, engine overhaul, brake operations and transmission operations.

Sales in Canada hold steady in March

March sales of light vehicles in Canada were 108,683, an increase of 57 over the year-ago month.

Trucks were up for the third month in a row, topping 1991 by 10.8 percent. Cars fell 7.7 percent.

For the first quarter, light-vehicle sales were 268,144, off 1.4 percent from the same period in 1991. Trucks were up 9.8 percent, and cars declined 6.3 percent, which was the pattern in each of the three months.

Saturn tops March sales per dealer

KAREN DETKOWSKI

Statistician

The Saturn marque and marketing philosophy are hitting their stride. Saturn Corp. had a record month in March, and Saturn dealers topped the *Automotive News* calculations for sales per dealer with an average of 116 each.

Toyota was a distant second in March, at 75 units. Toyota dealers weren't unhappy; they improved from February by seven more cars and five more trucks on average.

Of 39 makes, 27 improved in March, eight remained in line with February and four declined.

At Infiniti, March sales rose 45 percent over February, reflecting 46 sales per dealer. William Bruce, Infiniti vice president and general manager, said "March was a terrific sales month for all of our products, especially for the Q45, which had a banner month." AN

Mitsubishi to offer 'fuzzy logic' on car

TOKYO — Mitsubishi Motors Corp. last week introduced an active-control system based on so-called "fuzzy-logic" computer chips. The system, which will be used in an unspecified model, adjusts the car's control systems to various driving conditions.

Fuzzy-logic computers are so named because of their ability to understand such ambiguous conditions as "slightly icy."

NISSAN

Debt rating takes a hit

continued from PAGE 3

man said. "But we think that capital investment and r&d are necessary for the long term. It is inevitable."

The change in rating, he said, "will increase our interest burden, and our profit will be affected."

With its profit drying up in a shrinking worldwide market, Nissan will have to increasingly resort to more expensive debt to come up with funds for new products, new technology and better distribution and marketing.

Nissan's borrowings in the just-ended fiscal year totaled 270 billion yen (about $2 billion at current rates) at an average interest rate of 7 percent. The company estimates it will need to raise "at least" another 200 billion yen this fiscal year.

Doying estimates the rating change will add .05 percentage point to Nissan's interest expense, or an indicated 100 million yen (about $770,000) on 200 billion yen in new debt.

To help ease its cash bind, Nissan earlier this year took the highly unusual action of raising prices on commercial vehicles in Japan by 4 percent — the first such increase since 1974. Since Nissan's move, Mazda Motor Corp., Mitsubishi Motors Corp. and Toyota have followed suit with increases slightly below 4 percent.

Price hikes are virtually unknown in the Japanese market because there is no U.S.-style model year, and price increases are incorporated into model changes.

According to industry sources, the makers are now considering an industrywide price increase on passenger cars, although such a move would be opposed by both dealers and consumers.

"If a price increase is implemented now, it will only accelerate the severe conditions in the market," said Kenichiro Ueno, president of the Japan Automobile Dealers Association.

Mazda not worrying over Miata decline

LINDSAY CHAPPELL
Staff Reporter

If March sales are any indication, the bloom may be fading from one of Mazda Motor Corp.'s brightest roses.

Sales for Mazda's Miata, one of the hottest sports cars on the market since it appeared in 1989, dropped by nearly half in March at 2,323 units, down from 4,476 a year earlier. Overall import car sales in March were off 4 percent.

So far this year, the Miata is more than 40 percent behind first-quarter 1991. At this rate, the year could close with Miata selling about 20,000 units — 16,000 less than it sold in 1990.

Officials at Mazda Motor of America Inc. pooh-pooh the idea that the Miata craze is winding down. The company projects 1992 sales of about 32,000.

"The winter months are traditionally slow for the car," company spokesman Fred Aikens said. "It always picks up when the weather turns warm."

One new stumbling block may be Mazda's own doing. The company introduced the snazzy MX-3 last fall that, although a completely different vehicle, treads uncomfortably close to the Miata.

Do Miata sales plus MX-3 sales equal Miata would-be sales?

"We're selling some MX-3s to people who probably came in looking for a Miata," says Ben Giles, general manager of Lindell Mazda in St. Petersburg, Fla. "We're still selling (Miatas), but Mazda has more product now. We're not keeping as many in inventory."

Washington-area GM dealers unite for advertising blitz

DAVID VERSICAL
National Editor

WASHINGTON — While American quality took a beating during the Big 3 chiefs' visit to Japan last January, General Motors dealer Jack Pohanka plotted a counterattack.

His plan: persuade consumers that GM's quality has improved despite the widespread perception that it hasn't.

"We feel that our products are damn good, but consumers aren't aware," says Pohanka, whose Pohanka Automotive Group in Marlow Heights, Md., sells Saturn, Chevrolet, Oldsmobile, GMC, Cadillac and eight other makes.

The results began airing yesterday, when GM dealers in the Washington area began a one-month, 1,000-ad blitz on local TV asking viewers to "discover" GM.

The campaign is unusual because six GM dealer groups combined to create it. Their ad agencies competed to create the spots.

Chevrolet's local agency, Demaine-Vickers of Alexandria, Va., prevailed with a series that combines an owner's pitch for a product or division with a plug for GM.

Chevrolet, which accounts for about half of GM volume in the area, will be the focus of about half the spots.

Once the local dealers agreed on their plan, dealer Pohanka asked GM headquarters to help out.

"I thought I would be laughed out of the room," he says. Instead, the automaker gave $500,000 for the $1.5 million program.

If it works, the idea could be copied in other parts of the country.

While the owner testimonials in the Washington ads mention rebates, the focus is on product and features.

"I looked at the Lexus," says Oldsmobile Eighty Eight buyer Wes Buschow in one ad. "Are you smart to spend $20,000 more? I don't think so."

Saturn is the only GM make not featured in the ads. But GM's newest car division will take part in a related event May 2 in Tysons Corner, Va. On that day, GM will offer test drives to the public and a chance to talk to workers who designed and built the car. Showroom salespeople won't be there.

Organizers insist they are not bashing Japan with the campaign. But according to GM spokesman Bill Noack, there probably isn't a more important city for these ads to run than Washington.

The spring sales recovery is stuck in low gear. Early April new-vehicle sales failed to pick up momentum because of lingering consumer reluctance.

April 1-10 sales of domestic and imported light vehicles totaled 302,675, up just 4.0 percent over the dismal early-April period last year.

Sales of domestically produced light-duty trucks were up 10.4 percent and provided what little impetus there was in the period, signaling that the recovery is still in the formative stages.

Although commercial purchases are accelerating, consumer activity remains sluggish.

"There was some pretty genuine disappointment in the early April results," said auto analyst William Pochiluk, president of Autofacts Inc. in Paoli, Pa.

Pochiluk expects some movement in the sales numbers soon as fleet purchasers get back in the market.

"Fleet numbers have been very weak, but they're coming back," Pochiluk said.

"Some of the major fleets will come back into the market over the next six to eight weeks to recycle last fall's six-month program cars. That should make the numbers look pretty good."

New-vehicle inventories are ready for the recovery. Dealer stocks of new cars and trucks at the beginning of the month were slightly higher than recent April 1 levels.

Total new-car and truck inventories for domestic and import makers equaled a 73-day supply at the beginning of the month, compared with a five-year average of 69 days on April 1. (See inventory table on Page 27.)

Domestic car stocks were the leanest with a 61-day supply; imported-car stocks on April 1 were 89 days.

There was an 81-day supply of domestically produced light trucks at the beginning of the month. The stock of imported trucks was 83 days.

Although sales of domestically produced trucks were up dramatically in early April, imported-truck sales were off 7.1 percent at 10,794.

In early April, sales of domestic cars rose 2.7 percent to 151,476 units, while imported-car deliveries declined 2.6 percent to 40,213.

General Motors, which posted a 2.2 percent sales decline in early April, started the month with a 76-day supply of vehicles.

Ford Motor Co., which was up 10.1 percent in the April 1-10 period, had a 67-day supply as of April 1.

It was estimated that Chrysler Corp. sales were up 14.7 percent in the 10-day period.

Chrysler began the month with a 69-day supply of vehicles. AN

Piech to take helm at VW

FRANKFURT — As expected, the Volkswagen AG supervisory board has officially named Ferdinand Piech, 54, to succeed Carl Hahn as chairman on Jan. 1, 1993.

Hahn, 65, has been chairman since Jan. 1, 1982. Piech, chairman of Audi AG, also is a director and major shareholder in Porsche AG.

During Hahn's 10 years as chairman, VW has moved ahead of Fiat Auto S.p.A. to become Europe's largest auto manufacturer. He also set the company on a massive international expansion course.

Piech succeeds Hahn

Under Hahn, VW has acquired Spain's Seat SA; set up the Autolatina joint venture in Brazil with Ford Motor Co.; created two joint ventures in China; and acquired a controlling interest in Skoda, the Czechoslovakian state-owned carmaker.

The board said Hahn had recommended Piech as his successor "as a means of assuring the continuity of the policies he had himself pursued" at the helm.

The board named Daniel Gouedevert, 50, deputy chairman of the board of VW. He will combine the new job with the post of chairman of the VW-brand board of management that he currently holds.

Mercedes exec goes to PR firm

LOS ANGELES — The head of Mercedes-Benz of North America Inc.'s western region, Gerald Giaquinta, has left the company to become president and chief executive officer at Bob Thomas & Associates, a Manhattan Beach, Calif., public relations agency.

Giaquinta, 40, says he hopes to expand the agency into such areas as public affairs and government relations. It currently handles the Nissan and Infiniti accounts for Nissan Motor Corp. in U.S.A.

Agency founder Bob Thomas will remain chairman of the firm.

Before joining Mercedes' public relations staff in 1989, Giaquinta worked at Toyota Motor Sales U.S.A. Inc. for 10 years. AN

Employer spiffs spur vehicle sales

ARLENA SAWYERS
Staff Reporter

Cimco Inc. expected maybe a "couple of dozen" takers when it offered $1,500 to any employee who bought a new Big 3 vehicle.

But from mid-January to the end of March, the sheet metal tooling supplier paid $160,500 to 107 workers who bought new Chrysler Corp., Ford Motor Co. or General Motors vehicles. The company has 300 employees.

Cimco of Warren, Mich., is one of several auto suppliers and other companies that took up the cause of the ailing U.S. auto industry by offering cash to employees who buy or lease Big 3 vehicles or vehicles built in North America.

The cash incentives usually range from $100 to $2,000.

GM, Ford and Chrysler sweetened the deal by matching the companies' offers up to $1,000 in addition to their national and regional incentives.

Chrysler's matching program expires April 30; the programs at Ford and GM are scheduled to end June 4.

John Ausilio, Cimco executive vice president, was so proud of his employees that he invited the 107 new-vehicle owners to a champagne party.

The movement sprouted from a dismal economy and Japanese officials' unflattering assessments of U.S. auto workers and the vehicles they build.

Torrington Co. of Torrington, Conn., a supplier of bearings and precision components, is another company that came to the aid of the Big 3.

The subsidiary of Ingersoll-Rand Co. limited its $2,000 employee incentive to purchasers of GM, Ford and Chrysler products made in North America.

Four weeks into the program, 400 of the company's 9,000 employees had applied for the cash.

While the effort is informally dubbed "Buy American," some firms offering employee incentives say the label is a misnomer. The idea, they say, is to stimulate auto sales and boost the U.S. economy, not to bash Japan or Japanese manufacturers.

"It was about putting people back to work," said David Lippy, a spokesman for Jump Start America, a Warren, Ohio, organization that urged businesses to offer their employees cash incentives to buy vehicles assembled in the United States.

Jump Start America was begun by Lippy's father, William Lippy, a Warren, Ohio, surgeon, who offered his 35 staff members $600 each if they bought vehicles made in the United States.

So far, three have purchased new vehicles.

Chrysler was pleased with the companies' efforts and sent them letters explaining the matching fund program, a Chrysler spokesman said.

It's difficult to determine what, if any, effect "Buy American" has had on vehicle sales.

But the Big 3 gained 0.8 of a point of market share in the first quarter while the Japanese makes lost 0.5 of a point.

The cash offer encourages people who were planning to buy new vehicles to buy them sooner rather than later.

"We wanted employees to do something now, not in six or 12 months," said Jim Buckley, executive vice president of Saginaw Machine Systems Inc., a Saginaw, Mich., machine tool manufacturer.

Twenty-nine of Saginaw Machine's 146 employees bought Big 3 vehicles during a 60-day period and received $1,000 from the company.

Monsanto Chemical Co. of St. Louis, a supplier to all automakers including the Japanese, has paid $1,000 to 1,288 of its 12,000 employees who bought or leased vehicles assembled in North America.

"We feel we're going to hit the 2,400 mark," said Carl Moskowitz, director of Monsanto's "Project Get Rolling." AN

Could you sell 300* MORE units over your current 1992 projections?

YOU CAN DO IT!
Dealer Carried Financing is the Answer!

FACT: Dealers lose sales because customers can't get approved by conventional lending institutions.
FACT: DCF, or Buy Here-Pay Here, is the fastest growing profit center in the auto industry.
FACT: Dealers can enter this profitable business and have their investment back in 18 months.
FACT: Over 650 Dealer Organizations from the United States and Canada have learned how to achieve these results from one source. A source that offers to:

HONDA

Officials working to replace Irimajiri

continued from PAGE 3

under no circumstances will the reorganization be scrapped.

"The management structure will not change," said Kawamoto in response to a series of questions submitted by *Automotive News*.

"From an operational point of view, his absence is a minus. But we're trying to fill the gap with our existing management team. It might take some time, but I'm convinced we can do it."

The new structure was announced on March 15, 1991, a date now referred to inside Honda with a kind of "Year Zero" sense of importance. The changes effectively brought Honda into the modern era of management by implementing basic direct-line responsibility for top executives in place of a clumsy consensus system and a collection of vaguely defined board-level positions.

SPLITTING THE BUSINESS

The year-ago changes split the auto, motorcycle and power products businesses into three autonomous groups and established a more centralized, top-down structure with clear lines of authority.

The major emphasis of the born-again Honda is now on regional product development and faster decision-making.

The auto division was set up with two big groups — product development and manufacturing under Irimajiri, and sales and marketing under Munekuni. Kawamoto wears two hats, running the automobile division as well as serving as president of the corporation.

"Now everyone has very clear responsibilities," said the Honda spokesman. "It is as if top management stepped down to take line responsibilities."

Below the top three are only four senior managing directors. They include Hiroyuki Yoshino, president of Honda of America Manufacturing, Inc. — the man likely to replace Irimajiri — and Koichi Amemiya, president of American Honda Motor Co.

Previously, Honda's president and executive vice presidents had no specific responsibilities, and most other board members had only slightly more defined realms of expertise. Yet the board was linked directly with each operating division, a system that made swift response to external conditions difficult.

"I have noticed a definite improvement in our determination to speed up decision making, especially at the top level," said Kawamoto. "But it is too early to evaluate the total results. It will take at least two years for the changes to spread throughout the organization."

"Considering the current economic conditions in the global market, I'm more convinced we were correct in doing the reorganization," he said.

ANALYSTS APPLAUD

Most industry analysts have applauded the reorganization.

"I think what they did a year ago was the right thing to do," said Ben Moyer of Merrill-Lynch's Tokyo office. "They needed somebody in charge of each division, not only to boost revenues, but to control costs."

Stephen Usher, auto industry analyst at Kleinwort Benson International in Tokyo, said it is still too early to assess the merits of the reorganization.

"It will take two or three years," he said. "In certain cases it may require a whole new product cycle, four years. But there is a sharp improvement in morale at Honda."

Endo also says the changes improved morale. But the shift from a consensus style to less democratic rule by Kawamoto, Munekuni and Irimajiri carried inevitable problems, he said.

"It is still too early to say if it is successful or not," said Endo. "But by looking at the resignation of Mr. Irimajiri and various rumors, many people seem to think it was not necessarily successful so far."

Endo even speculated that Irimajiri's leaving could result in a return of the former system.

"It is possible, but it is too soon for it to happen," he said.

While the reorganization seems appropriate for a company grown to Honda's size — 85,500 employees worldwide — Endo said the company owes its success to the management methods of founder Soichiro Honda.

CHANGING THE CHEMISTRY

To therefore adopt a system no different from Toyota or Nissan means "Honda may have lost its uniqueness," he said.

For Kawamoto, the major objective of the reorganization was to change the "chemistry" of Honda, to improve decision-making and to make the process more efficient and effective.

"Our corporate culture, a challenging spirit, remains unchanged," he said. "The fact that we are undergoing reorganization is itself extremely challenging."

While centralizing management in Japan, Honda also decentralized product development, thrusting more self-reliance onto its American and European operations.

But the surprise resignation of Irimajiri and the resulting need to rethink the top-tier structure that hinged on the individual abilities and personalities of the ruling troika sent Kawamoto and associates behind closed doors to work out a new top-level set-up.

Usually among the most accessible of Japanese chief executives, Kawamoto has been notably inaccessible of late.

"Since Iri resigned, Mr. Kawamoto has been very hard to reach," said a Honda official.

The company also is awash in speculation about the cause of Irimajiri's resignation. Indeed, almost no theory for why a man would leave a company has not turned up in rumor form.

Irimajiri has been not been seen for weeks and his house is vacant.

Reportedly, Irimajiri told Kawamoto shortly before resigning his job on March 16 that, "I'm totally exhausted, both physically and mentally. I can no longer take on the arduous tasks this job demands, so I wish to resign."

According to Usher, the resignation of Irimajiri is a huge question mark because no one really knows the truth.

"There is a certain amount of uncertainty now," he said. "The resignation and the way it was handled are the causes of that uncertainty."

Irimajiri remains a member of the boards of Honda Motor Co. and Honda R&D, but not an executive. Temporarily, Munekuni is taking all the manufacturing responsibilities, while Kawamoto runs Honda R&D.

"Someone or some people will replace Irimajiri," said Usher. "But I don't think you'll see Munekuni take on a significant increase in responsibilities." Finding someone of Irimajiri's stature to step in would be difficult, he reckoned.

Sources say Honda of America Manufacturing's Yoshino is the probable successor to Irimajiri. But the size and division of responsibility of the top management team could change drastically. For example, a company official speculated that there may be only a president, Kawamoto, and a single executive vice president, Munekuni, but the range of duties that had been handled by the three men could be spread over as many as five.

Or alternatively, a fourth or even fifth executive vice president could be named.

However, Honda officials insist that the basic precepts set forth a year ago will not be diluted.

YUGO

War drives final nail in importer's coffin

continued from PAGE 1

dition. "I asked him, 'How grave?' And he asked me if I'd like to buy a desk and some chairs."

Yugo owes "millions," but its assets represent "a much, much lower number," said Bruce Buechler, a Roseland, N.J., attorney representing Yugo in U.S. Bankruptcy Court in Newark, N.J., where the petition was filed.

Buechler said some dealers were told last week before the filing that Yugo was thinking about quitting.

The political turmoil and civil war in the Yugoslavian federation finally did Yugo in. The U.S. company couldn't get cars out of the Serbian republic, where parent company Zavodi Crvena Zastava is located, and Zastava was having problems getting components in.

The "uncertainties" in Yugoslavia "made it impossible to provide Yugo America Inc. with a regular and dependable supply of vehicles and necessary financial support," the company said in a prepared statement. Zastava "is presently investigating the possibility of continuing to supply spare parts for Yugo vehicles in the United States."

Despite the problems in Yugoslavia, Yugo never really recovered from declaring Chapter 11 bankruptcy in January 1989. Yugo, which had been an independent distributor, managed to reorganize itself and emerge from bankruptcy a year later as a wholly owned subsidiary of Zastava and Genex, a Yugoslavian trading company.

But the damage was done, especially with Yugo's dealers, who were among the largest creditors. Yugo co-founder William E. Prior, who rejoined the company in April 1991 only to quit again seven months later, said he was shocked to find when he came on board that Yugo had fewer than 10 dealers actively pursuing Yugo sales. As of Jan. 1, the company had 157 dealers.

Yugo's fundamental problem was the poor quality of its early imports, rated by *Consumer Reports* as the worst car it had ever tested.

"It's a dirty shame. There was nothing wrong with those cars," said Ben Stepman, a Yugo dealer in Henderson, Nev. "If you put a Ford badge on those cars, Ford couldn't build enough of 'em."

Yugo sales improved 86.3 percent in the first quarter of this year to 1,412. But apparently the company was selling out of inventory and never sold 1992 models.

Yugo entered the U.S. market in 1985. Its highest sales came in 1987, with 48,812 units. ■

Holiday trims output

ANNE E. WRIGHT
Chief Statistician

All assembly plants in the United States and Canada except Toyota Motor Manufacturing U.S.A. Inc.'s Georgetown, Ky., facility were closed on Good Friday.

Chrysler Corp., Ford Motor Co. and General Motors plants will be closed today under terms of their UAW contracts.

Last week's estimated U.S. and Canadian car and truck production slipped 13.6 percent below the prior week, but rose 3.4 percent from the year-ago week despite the Friday close.

U.S. car production was estimated at 105,869, down 12.5 percent from the prior week and down 1.9 percent from the year-ago week.

Year-to-date, U.S. car production is 1,640,230, up 2.2 percent from 1991.

Car production in Canada was estimated at 20,302 last week, down 19.6 percent from the prior week and down 10.3 percent from the year-ago week.

Canadian car production so far this year is 298,098, down 3.7 percent from 1991.

U.S. truck production was estimated at 73,873 last week, down 13.9 percent from the prior week and up 7.9 percent from the same week one year-ago.

Year-to-date, U.S. truckmakers have assembled 1,153,143 vehicles, an increase of 30.4 percent over the same period one year ago.

In Canada, truckmakers' estimated production last week was 17,327, down 11.8 percent from the prior week but up 55.6 percent from the year-ago week.

So far this year, truck production in Canada is 339,464, an increase of 45.5 percent over 1991.

The daily build rate of cars and trucks in the United States and Canada was 54,343 for the four-day holiday week, an increase of 8.0 percent over the prior week and 29.3 percent over the five-day week in 1991.

Production of the Jeep Wrangler at Chrysler's Brampton, Ontario, facility ended last week. Brampton employees are being transferred to the Bramalea, Ontario, plant, which is slated to begin production of the new Chrysler, Dodge and Eagle midsized sedans in June.

Production of the Wrangler will be shifted to Toledo, Ohio, where all other Jeep models are produced.

General Motors scheduled overtime last Thursday on the Suburban line at the Janesville, Wis., facility.

Ford scheduled daily overtime last week at the Atlanta; Chicago; and Kansas City, Mo., car plants.

The company also ran daily overtime at the Lorain, Ohio; Edison, N.J.; Louisville, Ky.; and Twin Cities (St. Paul, Minn.), truck facilities last week.

Chrysler did not schedule any overtime last week. ■

Isuzu Rodeo, pickup price up

WHITTIER, Calif. — Following price hikes by other Japanese importers, American Isuzu Motors Inc. last week raised the prices on its pickup and Rodeo sport-utility last week.

Isuzu lifted the price on the four-cylinder base Rodeo by 2.2 percent to $13,199 from $12,919. The top-of-the-line V-6 Rodeo will now be $19,479, up 2.8 percent.

New prices of the 1992 pickups range from $8,599 to $16,299. Previously, the range was $8,349 to $15,879.

Isuzu did not raise prices on its passenger cars, which are only a small part of the company's volume. Prices for the Amigo sport-utility and the recently introduced Trooper were not changed.

Yugo dealers left stranded

Sudden pullout exposes gaps in laws' protection

JIM HENRY
Staff Reporter

NEW YORK — Yugo America Inc. has left its dealers and owners stranded with its sudden withdrawal from the United States.

State and federal laws require defunct car retailers to honor warranties and oversee safety and emission recalls. But the laws assume that there will be someone around to carry out the company's obligations.

So far, at least, the only prospect Yugo has offered its dealers and customers is that it is "investigating the possibility of continuing to supply spare parts for Yugo vehicles in the United States." Yugo's parent company, Zavodi Crvena Zastava, hasn't said when, how, or if that will be done.

"The problem is, neither the federal nor the state statutes were written with the thought in mind that somebody might go out of business entirely," said Vernon Vig, a New York attorney who helped Daihatsu America Inc. research its legal obligations upon ending U.S. sales.

"There are a whole host of duties and obligations to various constituents — dealers, customers and government agencies — even if they're not as clear as they might be," he said. "But I don't know what happens in a case like Yugo. I think everybody's probably out of luck."

He said that rather than a single, uniform body of law, the biggest factors ruling a company's conduct when it withdraws from the United States are "common sense and good faith."

Yugo has little to lose in the United States.

Macho Miata

Mazda designers, seeking to create a modern version of Carroll Shelby's V-8 sports car classic of the 1960s, have crafted this wide-bodied M2 1006 prototype based on the Miata. If approved, the 3.0-liter, V-6 powered sports car could see limited production for Japan by early 1994. See story on Page 31.

McNamara could lose C-P deal in GMAC mess

JIM HENRY
Staff Reporter

NEW YORK — Federal prosecutors could stake a claim to virtually everything Long Island dealer John M. McNamara owns, including his Chrysler dealership, if the government can show that McNamara used illegal proceeds from the gigantic General Motors Acceptance Corp. fraud case to run his other businesses.

Although McNamara's Station Chrysler-Plymouth-Jeep-Eagle dealership in Port Jefferson Station, N.Y., has not been named in fraud charges relating to his General Motors dealership, it could be in jeopardy. The Chrysler dealership was still open last Friday.

Without referring specifically to the McNamara case, an FBI spokesman said it is common in money-laundering cases for the government to go after assets tainted by illegally obtained funds.

GMAC already seized the assets of McNamara's other dealership, McNamara Buick-Pontiac in Port Jefferson Station, on April 3, after negotiations broke down over payments on McNamara's $436 million debt to GMAC.

McNamara: free on $300 million in bail.

A State Supreme Court judge later threw out the order authorizing the seizure, but GMAC is appealing that ruling.

Meanwhile, Station Chrysler-Plymouth is "running and healthy, and I plan to keep it that way tor a long time," said General Manager Steve Brien.

For its part, Chrysler Financial Corp. has checked and double-checked McNamara's accounts with Chrysler, and found he's "up to date," said Bob Heath, a Chrysler Financial spokesman.

"We have done our homework

Losh wins big as Smith speeds GM

JOSEPH BOHN
Staff Reporter

General Motors President Jack Smith has kicked the corporate reorganization into warp speed with the appointments last week of the captains of the new North American Operations structure.

Oldsmobile General Manager J. Michael Losh, 45, wins big. Losh gets a top position as group executive of a newly-created North American Vehicle Sales and Marketing operation. All the other marketing division general managers will report to him.

John Rock, 56, former general manager of GMC Truck, replaces Losh at Oldsmobile.

GM had planned to develop NAO at a deliberate pace this year. But since the GM board replaced Lloyd Reuss with Smith on April 6, that organization's shape has rapidly become clear:

- All North American sales and marketing from Mexico to Canada, except Saturn Corp., now report to one man, Losh.
- Car and truck development moves firmly into platform teams and away from the two virtually defunct super groups that were established in the 1984 reorganization. E. Michael Mutchler, 57, head of of the Chevrolet-Pontiac-Canada group, becomes group executive for car platforms.
- All the top executives now report to the president. GM public relations people sent out an organization chart last Friday with Smith at the top. Chairman Robert Stempel was not shown on the chart.

Stempel, Smith and William Hoglund, the new chief financial officer, addressed GM employees on a closed-circuit broadcast Friday morning to talk about the appointments.

The appointments came on a day when the national media were already shouting headlines about GM's product lines. *The Washington Post* reported Friday that the Jack Smith regime, as part of a "top-to-bottom assessment of all GM products," is looking at cutting some redundant car models, such as the Chevrolet Caprice, and consolidating GMC Truck into Chevrolet.

The newspaper did not suggest that such cuts were imminent.

During the telecast, Stempel said GM won't be eliminating any of its

GM readies electric car for '94 debut

PHIL FRAME
Staff Reporter

General Motors' electric car will roll out of the assembly plant in early 1994 in time for spring selling season.

But the company is less sure about how many of the two-seaters the public will be willing to buy. GM has established widely varying production forecasts, calling for a 1996 production of as few as 4,600 electric cars or as many as 23,000, according to a report from an internal GM supplier.

GM also plans to introduce a right-hand-drive version for

Ford to export vans to Israel

DEARBORN, Mich. — Ford Motor Co. will begin exporting the Aerostar minivan to Israel next January, the first time Ford's North American operations will ship to that country.

Ford spokeswoman Lin Cummins said she did not know how many minivans would be shipped. She said the company is determining if changes need to be made to the vehicle, primarily to deal with the heat.

Cummins said Ford may also export the Aerostar to Europe because the company does not have a presence there with a passenger-type van. "It's a market that we think looks promising," Cummins said.

Ford of Europe has exported vehicles to Israel.

Sperlich heads Masco unit

Wayfaring Harold Sperlich has found yet another home at age 62.

The former Ford Motor Co., Chrysler Corp. and home-building executive has landed at Masco Industries Inc., where he's top-banana of Creative Industries Group in Taylor, Mich.

While he's not working full-time, the dynamic product whiz is executive in charge of Creative. His main task: planning and developing product and operation strategies.

In April 1991, Masco Industries consolidated Creative Industries, a design and engineering group, and C&C Inc., a design, engineering and production services firm for OEM special vehicle programs, which it purchased in 1987.

Sperlich was a Ford vice president in the 1970s. He joined Chrysler in the 1980s, becoming a driving force in development of the company's K-car and minivans, before leaving as president in 1988.

In 1990, he spent spent nine months as chairman and chief executive officer of PHM Corp., a home builder based in Bloomfield Hills, Mich.

— *Al Fleming*

GMAC rolls out Smartbuy plan

DETROIT — General Motors Acceptance Corp. announced an alternative vehicle purchase plan that combines lower monthly payments of leasing with the advantage of vehicle ownership.

GMAC's Smartbuy program debuted April 24 and is similar to Gold Key Plus, a program introduced by Chrysler Corp. last fall.

At the beginning of the Smartbuy contract, the company establishes the end-of-contract residual value of the vehicle. The down payment varies on an individual basis. At the end of the contract the consumer can choose to keep the vehicle by making the pre-established residual payment, or refinance it at the same monthly amount.

With 30-day written notice to GMAC, the consumer may turn the vehicle over to the dealer and pay a $250 disposal fee plus charges for excess mileage or wear and use.

Chrysler's program is similar except that a down payment of at least 5 percent is required and its specifies that the vehicle be returned in good condition. Also, under Chrysler's plan, the customer is billed 8 cents a mile for every mile over 15,000 a year.

GM sued for discrimination

WASHINGTON — The U.S. Equal Employment Opportunity Commission filed suit against General Motors in Chicago last week, charging that the automaker's dispute resolution policy discriminates against salaried workers.

The suit stems from a case in which Irvin Talbert, a salaried worker at GM's Electro-Motive Division in LaGrange, Ill., filed an age and race discrimination charge with the commission. He then sent a letter to GM's personnel department protesting his treatment by the company. The personnel department wrote back that Talbert could not use GM's Open Door Policy for resolving disputes because he had already filed a complaint with the commission.

The commission said its suit is based on a recent federal appeals court ruling in Chicago that makes it illegal for companies to force employees to give up their right to file Equal Employment Opportunity Commission charges if they want to also use in-house dispute resolution procedures.

Chrysler adds van incentive

HIGHLAND PARK, Mich. — Chrysler Corp. last week sweetened the deal on its minivans with consumer discounts on standard and optional equipment.

"Chrysler's First National Minivan Sale," which began April 23, applies to all 1991 and 1992 Chrysler Corp. minivans, except Dodge commercial vans, delivered from dealer stock by June 22 with the factory-installed discounted equipment.

Coupled with rebates already in place, the discounts raise customer savings to $2,100 to $2,600, depending on the region. Minivans carry a customer rebate of $1,000 in California and Hawaii and $500 elsewhere.

Customers may choose one or more of the following equipment discounts: integrated child seat, $100; sunscreen glass, $200; rear air conditioning, $300; Quad Command seats, $300; anti-lock brakes, $300; and leather seats, $500.

Also, 1992 long-wheelbase minivans that dealers order by May 15 and deliver within five working days will be eligible for the equipment discount.

See Page 38 for the incentive watch tables.

briefly

Iacocca's trip tops Bush's

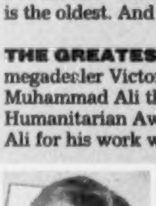
So you thought the trip to Japan was a waste of time, eh? Well, not so, according to **Chrysler Corp.** boss Lee Iacocca. Iacocca has told U.S. Commerce Secretary Barbara Franklin that President George Bush's trip to Tokyo in January has helped the U.S. automaker ink a $1.2 billion deal with its Japanese partner **Mitsubishi Motors Corp.** As previously reported here, Mitsubishi and Chrysler agreed in principal in October 1991 — months before the trip — that Chrysler will supply the powertrains for the next generation **Eagle** Talon, **Dodge** Daytona and Chrysler LeBaron coupe to be built by Mitsubishi at its U.S. plant in Normal, Ill. The agreement was signed in February after Bush's trade mission with the Big 3 auto chiefs in tow. The talks between Chrysler and long-time trading partner Mitsubishi were moving along at a "snail's pace" until the president and Commerce Department became involved, Iacocca told Franklin.

OUCH! — At the headquarters of defunct **Yugo America Inc.,** a sign in the window once trumpeted: "Yugo: Fastest-Selling European Import in U.S. History." But after Yugo shut its doors, some wag crossed out "Selling" and wrote "Disappearing."

NO FORD NOSTALGIA — How good were the "good old days?" For **General Motors** and **Chrysler Corp.,** they were very good indeed. For **Ford Motor Co.,** just so-so. Bob Thatcher of Export, Pa., sent along new-car sales figures for the first seven months of 1941. GM had 48.7 percent of the market, and Chrysler had 24.0 percent. Just a bit better than last year's 35.6 percent for GM and 8.6 percent for Chrysler. Ford hasn't changed much. It had 18.3 percent of 1941 sales and 20.0 percent last year. In 1941, imports were part of "miscellaneous," which accounted for less than one-tenth of 1 percent of the pie. Need the Big 3 be reminded that imported nameplates captured 35.8 percent of last year's new-car sales?

THE WINDIEST — For the record, the Chicago Automobile Trade Association took exception to a reference in *Automotive News* to the recent New York International Automobile Show as the "nation's oldest." The Chicago group cited an old copy of *Motor Age* magazine that dates the first Chicago show in March 1900, a few months before the first New York show the same year. The Greater New York Automobile Dealers Association says it doesn't want to argue, but the New Yorkers still feel their show is the oldest. And the biggest.

THE GREATEST — New York-based megadealer Victor Potamkin gave Muhammad Ali the Potamkin Humanitarian Award last week, honoring Ali for his work with children's groups. The Champ, hobbled by Parkinson's disease that has slurred his speech, didn't address the crowd at the posh Pierre Hotel, but he patiently signed autographs and posed for countless pictures. "I've got to do *something* to keep my name in front of people," joked Potamkin, whose name is in no danger of disappearing. He's modest about his own considerable charity work.



Potamkin: lauds The Champ

Ford may add Explorer to St. Louis

Workers worry over future of Aerostar

KATHY JACKSON
Staff Reporter

A Ford Motor Co. assembly plant in St. Louis may be retooled to take on added production of the popular Explorer sport-utility for the 1995 model year.

Rainey Crawford, employee relations manager at the St. Louis plant, says a study is being conducted to determine if St. Louis would be a logical site for a second Explorer facility.

"There would have to be modificiations," Crawford says, "and that would take a significant amount of money."

Ford spent $260 million to retool and expand its Louisville, Ky., plant, the sole source of the Explorer since it was introduced in the spring of 1990.

St. Louis is the lone plant for the Ford Aerostar minivan.

John Sherlock, president of UAW Local 325, which represents St. Louis workers, says the plant manager at Louisville, Les Tischler, recently issued a memo to Louisville employees stating that some four-door Explorers would be produced at St. Louis for the 1995 model year.

A phone call to Tischler was returned by Ford spokesman Bert Serre, who would not disclose the contents of the memo.

Sherlock says his members are concerned because Ford Division plans to introduce a new front-wheel-drive minivan for the 1995 model year.

He says the future of the rear-wheel-drive Aerostar is shaky.

"It (the Aerostar) was supposed to end in '91, but here it is '92," Sherlock says.

"I'm very upset with all these rumors going on. I wish the company would tell us something."

Serre says Ford has no plans to eliminate the Aerostar and that the new fwd van will enhance Ford's minivan offerings to three, including the Aerostar and Lincoln-Mercury's Villager, to be introduced this summer.

General Motors kept its rear-wheel-drive minivans when it introduced its fwd minivans in 1990 model year. The rwd Chevrolet Astro and GMC Safari were introduced in 1985.

In calendar 1991, sales of the Astro dropped to 105,808 from 121,168 in 1990; Safari sales decreased from 34,300 in 1990 to 33,600 in 1991.

Sales of the new minivans were down as well.

The Explorer has been one of the hottest selling vehicles in the United States; production is on the rise this year, while production of many other vehicles is down.

Through March 31, Louisville had produced 81,966 Explorers compared to 65,304 during the same period last year.

Explorer sales for the first quarter were up 27.9 percent to 71,149 units.

Aerostar sales through March totaled 36,034, up from 31,576 through last March. AN

Plant floor is fertile soil for ideas

Transplants give new life to the old suggestion box

LINDSAY CHAPPELL
Staff Reporter

GEORGETOWN, Ky. — Leonard Habermehl belongs to an army of thousands who are giving the Japanese transplants a manufacturing edge in North America.

Not because he works harder or faster or better at Toyota Motor Co.'s Kentucky plant than his Big 3 counterparts do. But because he's an idea machine.

Habermehl has generated 200 suggestions so far this year to make Toyota a better manufacturer.

The 34-year-old manual spot welder even carries a small notebook in his shirt pocket, with scribbles on both sides, to keep track of ideas. His most recent one renders aerosal cans non-hazardous so they can be discarded with the normal trash. The company will save $2,500 a month in special hauling fees.

Last year Habermehl was paid $1,332 for his ideas. He also is paid overtime to implement them and is rewarded with plaques, dinners, kudos from top management and other shows of appreciation for his efforts.

Habermehl is not alone.

Last year, Toyota Motor Manufacturing U.S.A. Inc. implemented more than 20,000 employee ideas. That averages more than six per employee. This year's target is 24,000. Eventually, the Georgetown plant hopes to match the levels of its comparable Japanese plants, or about 40,000 a year.

The growth of Japanese transplants has helped stimulate a new tool for competition in the United States: worker creativity.

Carmakers estimate that employee suggestions are shaving millions a year from factory overhead costs. The programs are not cheap. Toyota in Japan spends about 1 percent of its total manufacturing costs on suggestion-system rewards.

Plant administrators — echoed by the workers — say the programs have a more subtle function. They involve people in the well-being of the operation, make employees feel responsible for its success and eliminate the classic alienation of an industrial work force.

There are also material paybacks: cash, paid vacations and even new cars.

Whatever the rewards, observers believe the suggestion programs help the largely non-union Japanese transplants keep workers happy enough to avoid the UAW. But UAW-represented plants are chasing employee ideas, too.

The idea of worker creativity is not new. The Big 3 began suggestion programs in the 1940s. General Motors alone calculates it has paid out $925 million in awards for ideas since then. Last year, it paid $72 million for 211,000 suggestions.

RICHARD NUGENT

Johnny Coleman, a worker at Toyota's Georgetown, Ky., plant, rides a chair pirated from a bass boat. A co-worker designed the seat to reduce bending and walking.

> "It's recognition that people want. It's rewarding to have the president of the company come to you and congratulate you in front of all your peers."
>
> **DAWN BURRIS**
> HONDA SUGGESTION PROGRAM FACILITATOR

But the Japanese — particularly Toyota and Honda Motor Co. — are on top in ideas per employee.

Toyota administrators privately worry about keeping up with the deluge of ideas, which range from designs for rough, hand-made automated tools to repositioning rubbish bins.

But the company is still a model.

"We've been looking at Toyota," admits James Emanuel, employee suggestion program coordinator for Ford Motor Co. "Our goal is to increase the level of participation by our people. Toyota's doing some things right."

Ford received 15,000 ideas from its North American production workers last year, about one-sixth of a suggestion each.

A Chrysler Corp. spokeswoman said the automaker doesn't track the number of worker suggestions, but estimated the total would be "in the thousands."

GM last year averaged less than one idea per hourly worker.

GUNG-HO WORK FORCES

Some of the imbalance in the transplants' favor may be cultural. Newer organizations with fresh work forces — Toyota's Georgetown plant has been in operation for four years — tend to be more gung-ho on new ideas.

In addition, new plants invite suggestions as the kinks are worked out.

GM has been studying transplant partner CAMI Automotive Inc. in Ingersoll, Ontario, for the past three years. The 50-50 joint venture with Suzuki Motor Co. Ltd. netted an astounding 100,000 suggestions from its 2,200 workers last year — half the number of GM in North America combined.

It might also reflect national culture. While one in 10 workers takes part in the average U.S. company suggestion program each year, the average Japanese system gets a 67 percent response, according to the Japan Human Relations Association. More than half of Japanese firms get more than 90 percent participation.

Ironically, the suggestion system Ford created in the 1940s served as the model for Toyota's own program a decade later. Now the teacher-student roles are reversed. Toyota's Japanese operations have put more than 20 million ideas to work since the 1950s.

The results may also be a response to employer attitude. Honda of America Manufacturing Inc. in Marysville, Ohio, gives out modest awards for worker input — under $5 for most ideas, and generally no more than $100. But Honda's suggestion program has a 42-percent participation rate and yields about 16,000 ideas a year. Three of every four are implemented.

SMALL REWARDS ADD UP

The small returns add up for factory and workers alike. When Honda began its U.S. program in 1985, it promised a new Civic to anyone who accumulated 2,500 points — a long-term goal, considering that few ideas earn more than 13 points. Supervisors, engineers and managers assign points after

Domestic trucks notch sales gain

LINDSAY CHAPPELL
Staff Reporter

Strong truck sales for Ford Division were a bright spot in mid-April as the industry's daily selling rate for cars and light trucks edged up 8.3 percent over last year's anemic total.

Ford truck deliveries rose 25.5 percent over last year on a daily-rate basis. The division attributed the gain to its full-sized trucks and a redesigned van line.

GMC, Chevrolet and Chrysler Corp. shared in the truck upturn. GMC's daily rate climbed 14.0 percent; Chevrolet's was up 5 percent, and Chrysler's rose an estimated 28.5 percent.

Car and light-truck sales for April 1-10 totaled 329,637, down from 342,425 last year. But the 1992 period had eight selling days, compared to nine in 1991. The daily

Honda revising management to mirror U.S. setup

RICHARD JOHNSON
Staff Reporter

TOKYO — Honda Motor Co. is expected to further decentralize its worldwide passenger-car operations in June, in effect bringing the rest of the world into step with the way Honda is organized in the United States.

Under a proposed new global structure widely reported in Japan last week, Honda will formally designate Los Angeles as the U.S. regional headquarters. That merely confirms the existing set-up, since American Honda Motor Co. Inc. in Torrance, Calif., already functions as a regional headquarters in North America.

A European regional office will reportedly be established in London, and Honda's Tokyo base would oversee Japanese operations. Another headquarters would have responsibility for operations in the world's developing countries. Each of the regional centers would be managed by locally based Honda Motor Co. senior managing directors.

Honda sources say the automaker will separate the domestic market operations from the global oversight function at the Tokyo headquarters.

In America, "I don't think there would be a tremendous change," said a Honda executive.

Honda won't detail the impending changes.

Some analysts speculate that Honda may become more systematic in uniting all its North American operations under a single headquarters, including sales and manufac-

GM: Japanese cars aren't as safe

Officials fault protection in crashes, airbag design

JACK KEEBLER
Staff Reporter

Cars built by Japanese makers offer poorer protection in crashes than General Motors cars, say two of GM's top safety experts.

But Toyota Motor Sales U.S.A. Inc. and Nissan North America Inc. deny there has been a safety gap with any of their vehicles.

GM is taking its safety communications campaign on the road. The GM experts — David Viano, principal research scientist and assistant head of the biomedical science department, and Mitchel Scherba, manager of safety and crashworthiness systems — visited *Automotive News* offices in Detroit to get the word out on GM's safety leadership.

A GM spokesman said the company's safety group has visited Chicago and Dallas media and plans to meet with media and others in New York and Toronto.

Viano and Scherba targeted three major areas in which they said Japan has a safety breech:

- Older-model body structures that did not crush well in order to absorb crash impacts. Newer models are better.
- Airbags in many current Japanese models have excessive inflation pressures, high inflation gas temperatures and poorly positioned gas vent holes. These increase the possibility of burns.
- The Japanese makers, unlike the Europeans, have made little effort to share their safety research with the world's automakers in international forums such as SAE papers or on the Medline database.

"The Japanese have not traditionally viewed safety with the same level of social commitment as we have," said Viano. "Our commitment goes beyond the regulations."

Two of Japan's largest vehicle makers took strong exception to Viano's statement and GM's perception of their vehicle safety.

"Our safety is world class," said John Shook, a Toyota spokesman.

"To say it's not is purely subjective," Shook said. "And I'm sure there is FARS (Fatal Accident Reporting System) and other crash data that would verify that. Of course, 20 years ago, it might have been a different story."

The response from Nissan was just as strong.

"Mr. Viano is entitled to his opinion," said Fred Standish, a spokesman for Nissan North America Inc. "But we believe that it is unfounded and unsupported. "We are very proud of the safety design and performance of our cars. But don't take our word for it. Just look at government tests and field results like NHTSA

Product-rich Mazda eyes 500,000 mark

ARLENA SAWYERS
Staff Reporter

DETROIT — Mazda Motor of America Inc. believes it moved closer to its goal of selling 500,000 vehicles annually in the United States with the introduction of the redesigned 626 and MX-6 lines.

"Our long-term objectives have not changed. We didn't launch five new cars to stay where we are," said Clark Vitulli, Mazda senior vice president, at a press preview last week. "We launched them to grow."

The 1993 626 mid-sized sedan and MX-6 sport coupe are already trickling into dealer showrooms, Vitulli said. They are the last of five new vehicles introduced by Mazda in the past nine months. The others are the 1992 MX-3 and 929 and the 1993 RX-7.

Mazda sold 343,612 vehicles in the United States during the 1991 calendar year, of which 90,759 were MX-6 and 626 models. Vitulli said he expects to sell about the same number of those cars this year and "would like to see that grow to 100,000" next year.

Vitulli said Mazda expects to reach its 500,000 sales goal in the 1990s.

He said the MX-6 and 626 contain 75 percent domestic content and are expected to qualify as domestic under EPA guidelines. They are assembled at Mazda's Flat Rock, Mich., plant.

The typical 626 buyer is 37, married, has a household income of $60,000 and is just as likely to be male as female, said Jan Thompson, vice president of marketing.

The 626 is positioned to go head-to-head with the Toyota Camry and Honda Accord, she said.

The average MX-6 buyer is 38, single, has a household income of $55,000 and is looking for value more than price, with a little style, fun and prestige, too, Thompson said.

The MX-6's main competitors are the Honda Prelude, Toyota Celica and Nissan 240SX.

The ad campaigns for the MX-6 and 626 break May 18 and June 15 on network TV. Print ads will appear in 100 publications.

In addition to the TV and print campaign, Mazda has a sports marketing agenda that includes sponsorship of golf, tennis and marathons.

To make the vehicles more attractive financially, Mazda will offer consumer leasing programs.

Vitulli said Mazda is focusing 100 percent of it marketing budget on the five new vehicles.

While he would not reveal the marketing budget for the launches, he said the company did not increase its budget over last year.

JOE WILSSENS/AUTOMOTIVE NEWS

Marketing chief Jan Thompson wants distinct MX-6 and 626 personalities.

626 positioned as serious rival in its segment

KRISTINE STIVEN BREESE
Staff Reporter

SAN DIEGO — With its redesigned 626 sedan, Mazda Motor of America Inc. will have a serious entry in the sizable mid-sized segment dominated by the Honda Accord, Ford Taurus and Toyota Camry.

But Mazda's lower profile, combined with capacity constraints at its U.S. plant, will keep sales well below Honda, Ford and Toyota.

INTRO-'93

Still, Mazda hopes the redesigned model's styling, which mimics its top-of-the-line 929, and boosted performance will help the 1993 626 compete in a way that the former model never did.

Capacity at the Flat Rock, Mich., plant is limited to 240,000 units. Half of production likely will go to the 626 and the MX-6 coupe; the Ford Probe will have the balance.

Mazda says it can tinker with the ratio of 626 and MX-6 models produced at the plant; it anticipates nearly 70,000 sales of the 626 this year. In 1991, Mazda sold 68,369 units. But unlike last year, the company will source the cars only from Michigan. None will be shipped from Japan.

Mazda designers set out to "redefine the sedan," according to Kenichi Fukunaga, general manager of the development coordination department at Mazda Motor Corp. Fukunaga said Mazda wants to focus more on performance and style rather than simply function as with most family sedans.

MAZDA 626 FOR 1993

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (pounds)	Base engine	Drive type	Body styles
626	102.8	184.4	68.9	55.1	2,626	2.0L, I-4	fwd	4-dr.

The 626's dimensions are smaller than that of the Accord and Camry.

Two new engines are offered: a 2.0-liter, 16-valve dual-overhead-cam four-cylinder and a 2.5-liter, 24-valve dohc V-6.

Mazda opted for the V-6 for the high-trim 626 and dropped the turbocharged four-cylinder offered in the old model. Mazda says it made the change to boost driving smoothness and eliminate the drastic torque steer with turbo.

The V-6, which is shared by the high-end MX-6, produces 164 horsepower at 5,600 rpm and 160 pounds-feet of torque at 4,800 rpm. The 626's standard four-cylinder engine delivers 118 hp at 5,500 rpm and 127 pounds-feet of torque at 4,500 rpm.

By comparison, the base Accord sedan has a 125-hp four-cylinder engine, while the top-of-the-line has a 140-hp four-cylinder; there is no V-6 option. The standard Ford Taurus sedan carries a 140-hp V-6; a larger V-6 is optional. The Camry sedan comes with a 135-hp four-cylinder; a 185-hp V-6 is available.

Mazda is offering a standard driver-side airbag and optional anti-lock brakes on the DX, LX and the V-6 powered ES.

Court kills GM's veto in transfer of franchise

HELEN KAHN
Senior Correspondent

A Florida appeals court has told General Motors it no longer has veto power over potential buyers of its dealerships because its franchise agreement conflicts with state law.

The case involves the "right of first refusal" provision in the GM franchise agreement. The provision allows a manufacturer to reject a proposed buyer of a dealership and, when state law permits, to purchase the dealership if a suitable buyer cannot be found.

The provision applies only to transfer of the franchise; it does not affect the sale of other assets such as land.

A three-judge appellate panel said the provision is void because it "collides with the legislative mandate" of the Florida Motor Vehicle Dealer Franchise Law. The ruling applies not only to GM, but to other companies with such provisions in their franchise contracts.

The ruling won't be final until April 30, the last date for GM to file a petition for rehearing before the full Court of Appeals for the First District of Florida.

The ruling stems from an agreement between Ace Golden Oldsmobile and Bayview Buick-GMC, both in New Port Richy.

After Ace agreed to transfer the entire assets of the dealership to Bayview or its assignee in May 1991, Ace notified GM of the pending transfer as required by state franchise law.

That law requires the manufacturer to inform the dealer of approval or give reasons for questioning the transfer. It allows manufacturers to file complaints with the state Department of Safety and Highway Vehicles if they object to the buyer as unqualified.

But GM did not do any of those things. Instead, it exercised its right of first refusal and rejected the sale. GM cannot offer to purchase the dealership because Florida law does not allow automakers to own dealerships except under unusual, temporary conditions.

Bayview then sued both Ace and General Motors and lost. But when Bayview appealed, the three appellate judges reversed the lower court.

They said that the provisions of the state franchise law are "unambiguous" and if they are not followed, the transfer occurs automatically.

Further, the judges said, the franchise law limits the freedom of the automaker to reject a buyer. So long as the buyer is of good moral character and has met the "written, reasonable and uniformly applied standards" relating to business experience, the law says he should be approved.

In this case, since Bayview is already a GM dealership, the judges said its qualifications are "presumptively acceptable."

The attorney for Bayview, Daniel Myers of Myers and Forehand in Tallahassee, said the ruling protects car dealers.

Myers said for the last 18 months, GM has tried to re-mold its dealer body. If the right of first refusal is not curbed, Myers believes GM and other makers eventually could control the market by dictating franchise dualing.

Paccar to build mid-range in Canada

JOSEPH BOHN
Truck Editor

SAN FRANCISCO — Paccar Inc. plans to stop importing medium-duty low-cab-foward trucks from Brazil and begin assembling them in North America this summer.

Paccar, the parent company of Peterbilt Motors Co. and Kenworth Truck Co., also plans to come out with a new line of conventional medium duties in the second half of the 1990s.

That would fuel a war in what has been a market fairly evenly divided among Ford Motor Co., General Motors and Navistar International Corp.

Peterbilt and Kenworth dealers will receive their first shipments of Paccar's new Mid-Liner in August, David Hovind, president of Paccar, confirmed during the American Truck Dealers Convention.

Hovind said the company will bring in Brazilian-built Volkswagen cabs and assemble the trucks in Montreal using its own chassis and North American vendors.

Paccar has been importing Class 6 and 7 Mid-Rangers from Autolatina in Brazil since 1986. Inflation and labor problems no longer make this cost efficient.

Hovind did little more than confirm the project. But George Rafferty, chairman of the American Truck Dealers' 29th annual convention and president of Chicago Kenworth in Markham, Ill., said the new Mid-Rangers would be chiefly Class 7 vehicles with some specification provisions for Class 6 use.

The cabs will be mostly shells, with Kenworth and Peterbilt providing the interior trim and all the accessory installations. The chassis will be Paccar's.

The vehicles also will have more North American content. Suppliers include Cummins for B- and C-series engines, Ford Motor Co. for the transmission and Eaton Corp. for the axles, Rafferty said.

At first, Paccar will purchase the same cab it has been using, but it plans to create its own cab, Rafferty said.

He applauded the move, saying it would improve delivery times and quality, as well as making the vehicles more cost-efficient.

"Up to now they, in effect, have been dictating the specifications and buying a purchased vehicle. Now, they can build their own to their own specifications and under their quality standards," Rafferty said.

The fact that Paccar is building the vehicle rather than buying a joint venture product is also good news for Kenworth and Peterbilt dealers looking for greater product exclusivity.

Autolatina is a joint venture between Volkswagen do Brasil and Ford do Brasil.

The low-cab-forward segment of the medium-duty market has been dominated by Japanese makers.

Ford, which began assembling the Cargo in Louisville, Ky., last year, is the only domestic producer and accounts for about 15 percent of the medium-duty market.

Conventional medium-duty GMC/Chevrolet, Ford and Navistar models account for the balance.

Freightliner Corp. entered the medium-duty conventional market last year, but hasn't made much of an impact yet with its Business Class line.

Paccar hasn't made a formal announcement about getting into the medium-duty conventional market, but has clearly indicated its desire to do so, according to Kenworth and Peterbilt dealers.

They said that new medium-duty conventionals, slated for the second half of the decade, are in the prototype stage.

They will fuel an outright war in Class 6 and 7, making it as competitive as Class 8, which has seven major players. ■

The Peterbilt 227 medium-duty model is imported from Autolatina in Brazil.

SAFETY

GM claims Japanese lag in protection

continued from PAGE 6

crash reports."

Standish said the National Highway Traffic Safety Administration has published crash data as recently as March 26 that showed Nissan vehicles outperformed GM vehicles in the same weight classes.

GM maintains that Japanese carmakers do not participate fully in discussions on vehicle crashworthiness and passenger safety.

But at least recently, Nissan has attempted to participate more fully in safety forums. In February, Nissan Motor Co. presented two crash-safety papers at the SAE congress in Detroit. One, titled "Numerical Analysis of Vehicle Frontal Crash Phenomena," explained how Nissan uses a supercomputer that simulates full-scale frontal crash tests to do finite-element analysis of body structures.

The other, "An Investigation of Steering Column Collapse Behavior Using Finite Element Analysis," describes a Nissan computer model to predict column behavior as the column slid, bent and tore from its energy-absorbing bracket.

Nissan's Detroit public relations office issued a statement covering the safety-paper publishing question: "We know GM produces a lot of technical papers. Nissan, too, has produced papers. But we prefer to spend time on computers designing better cars."

Viano and Scherba said Japanese makers, including Toyota and Nissan, frequently talk to GM's biomedical science department at the Warren, Mich., Technical Center seeking advice and information on crash safety improvements.

"I used to talk to the Japanese on the telephone," said Viano. "I was helping them until quite recently. But with this 'war' we have going on right now, I've had second thoughts about taking the calls."

Ford Motor Co. and Chrysler Corp. declined official comment on Japanese-vehicle crash safety. A Ford insider said that although Japan-based makers were "slow out of the blocks" on safety, they are catching up fast.

Viano said discussions with the Japanese on crash safety are currently very one-sided.

Shook at Toyota cited two reasons for the general reluctance to participate in safety discussions. The first is a language problem. Engineers at Toyota did not see translating their safety work into English as a "value-added" effort. The second is a fear of legal action by overly aggressive lawyers.

"A little bit of knowledge can sometimes be a dangerous thing," said Shook. "We fear product liability problems."

A Ford spokesman said GM has spent considerably more than other makers in establishing its own biomedical laboratory "with a full-time staff, company doctors and live-animal research." The spokesman said Ford's funded university research is more cost-effective.

The spokesman said the full-time staff also is the reason GM has more published safety papers than other makers. Research funded by Ford is frequently published by the participating universities.

GM's Scherba said two critical factors favored its airbags over Japanese bags:

- GM crash-sensing systems use multiple sensors and have higher sensitivity.
- GM bags have safer deployment because of cooler internal bag temperatures, better positioning of bag vent holes to prevent burns, lower pressures and smoother unfolding.

"I don't want to criticize," said Scherba. "But some of the Asian makers rushed cars to market with airbags. We didn't."

Toyota questions what data GM experts have been examining to support their claims of superior airbag protection.

"On the airbags, we really wonder what was looked at," said Toyota's Shook. "Inflation rates and pressures for our airbags are all tuned for specific models. The inflation rates in these different vehicles are all intentional."

Nissan said its airbags perform according to finely tuned company specifications. Nissan also said it is aware of no complaints concerning either excessive inflation pressures or high gas temperatures that might lead to burns. ■

EXPORTS

GM plans to boost overseas sales

continued from PAGE 3

countries, Lee said. He said the in-house distribution company will keep control over exports to six countries in Central Europe, which he declined to identify.

Lee said Italy, Spain, Norway and Finland probably will get independent distributors. That leaves Germany, Austria, Belgium, Denmark, the Netherlands and Switzerland as the countries to be handled in-house.

Last year, the Middle East took about half of the GM vehicles exported from the United States. By the mid-1990s, Europe is expected to be the biggest export market with half of GM's volume. Lee said that requires not only a new distribution system but also products geared for the market.

GM wants to homologate all its export vehicles in their North American assembly plants.

GM is studying the markets to decide which of its products might do best and then will work with North American platform organizations to design product attributes that sell overseas, Lee said.

LEADING CANDIDATES

International Export Sales already has identified some top export candidates: the next-generation front-wheel-drive minivans, (see accompanying story below), the Chevrolet S10 Blazer sport-utility, Saturn cars and N-body models (mainly the Pontiac Grand Am).

Right-hand drive is one of the product attributes that the unit is trying to get, and much depends on availability of capital, Lee said.

Lee said overseas markets that require right-hand drive — mainly Japan, the United Kingdom and Australia — also are key markets for export expansion.

The next-generation minivan, S10 Blazer, N-cars and Saturns are being designed to have right-hand-drive versions for them.

Lee said the Saturn will be the first GM car to offer right-hand drive for export, followed closely by the minivan and the Blazer. Saturn won't have right-hand drive until the vehicles are redesigned, said Donald Hudler, Saturn vice president of sales, service and marketing.

Hudler wouldn't say when that will happen, but the Saturn coupe originally was scheduled for a redesign for the 1994 model year and the sedans the next year.

Right-hand drive will come with redesign of the S10 Blazer in the 1995 model year and the minivan in the 1996 model year.

But a rejuvenated effort in continental Europe, where right-hand drive isn't an issue, is considered the key to the unit's plans. AN

CHARLOTTE WINTER / AUTOMOTIVE NEWS

GM designs minivan with Europe in mind

PHIL FRAME
Staff Reporter

Without sales in Europe, some General Motors vehicles might not have a future in North America.

The next-generation GM front-wheel-drive minivan, due in calendar 1995 as a 1996 model, shows how GM's International Export Sales unit is working with North American platform groups to accomplish both international and domestic goals.

GM has had little success in Europe selling the minivan equipped with the 3.8-liter gasoline engine. Sales last year totaled about 5,000.

Richard Lee, executive in charge of International Export Sales, said the minivan needs a smaller gasoline engine and possibly a diesel to make significant volume gains in Europe, where vehicle taxes are based on engine displacement.

The 3.1-liter engine available on base models in the United States wouldn't help because the taxes typically jump at the 3.0-liter level.

In North America, the minivan has done so poorly that GM plans to close the vehicle's assembly plant in North Tarrytown, N.Y., in 1995 and move production of the new minivan to an unnamed plant that will build another product with it.

As a way to justify continuing a minivan, GM is planning for the next generation vehicle to include not just domestic sales but significant sales by International Export Sales and GM's Adam Opel AG subsidiary in Russelsheim, Germany.

A low-end version for Europe will be equipped with a 2.0- to 2.5-liter gasoline engine and possibly a diesel. That vehicle would be badged as the first American-made Opel. Lee said the Quad 4 engine is under consideration, as are some Opel engines. The engine could be built in Europe or the United States.

Lee said that for a more upscale European audience, GM would continue to market Chevrolet and Pontiac versions of the minivan equipped with the 3.8-liter engine. AN

VW

Payment guarantee attracts attention

continued from PAGE 3

year because the company was virtually out of vans and campers in preparation for the arrival of the 1993 EuroVan.

VW dealers sold 201 vans and campers in February-March, down from 834 last year. Car sales, as noted, were down 13.7 percent for the period.

The payment protection plan, Schembri said, is part of a "strategic plan" to help VW launch five new products, including the EuroVan, in the 1992 and 1993 model years.

The new products are the 1992 Corrado SLC, introduced in January; the 1993 EuroVan, to debut in July; the 1993 Passat GLX in late September; and the 1993 Golf and 1993 Jetta later in the fall.

Schembri said the program's success is measured in ways other than just sales numbers.

> The payment plan is part of a strategic plan to help VW launch five new products.

For instance, VW's toll-free consumer information telephone number, which has been in operation for two years, was included in the TV spots for Payment Protection Plus.

The telephone line received about 18,000 calls during the program, about 600 percent more than during its previous peak period.

Also, 80 percent of the calls were from "non-Volkswagen oriented people. People's general awareness toward Volkswagen was renewed," Schembri said.

VW has moved to the next step of its strategy, Schembri said. On April 1, the company broke a 30-second brand-oriented commercial highlighting the 1992 Passat began running on cable TV. AN

Finance manager gets jail term

SACRAMENTO — A finance manager for a Fairfield, Calif., car dealership has been sentenced to three years in federal prison for income tax evasion.

R. Scott McDonald, 42, of Vacaville, earned more than $200,000 in 1986 while working for Woodard Chevrolet but paid no federal income taxes, prosecutors said.

McDonald falsely claimed roughly $175,000 in employee business expenses to avoid paying about $43,000 in federal taxes from 1984 through 1986, according to the U.S. attorney's office.

He pleaded guilty in January to tax evasion for the 1986 calender year.

U.S. District Judge David Levi ordered McDonald to begin serving his sentence May 26.

Levi also agreed to let prosecutors investigate whether McDonald should have to repay the cost of his defense, which was furnished at taxpayers' expense.

— *The Associated Press*

SALES

Domestic models have good showings

continued from PAGE 4

rate this year was 8.3 percent ahead of 1991.

Domestic models performed best in mid-April. On a daily-rate basis, sales of trucks built in the United States and Canada rose 18.8 percent, and cars jumped 6.9 percent.

Conversely, sales of imported trucks plunged 15.8 percent while imported cars went up 1.0 percent.

The increase in domestic car sales represented an additional 1,218 cars a day. The import hike was 68 cars a day.

The industry sold 41,204 cars and trucks a day during the 10-day period this year, up from 38,047 a day in the same period last year.

Tom Webb, chief economist for the National Automobile Dealers Association, noted that the overall volume was still low on a seasonally adjusted basis.

"We were expecting somewhat more of an improvement," Webb said.

"Most people would tell you that sales continue to be disappointing. We believe the improvement in the economy is out there, but we are still at about the same level of sales we've been at since last October."

A Ford spokesman said the truck gains were due largely due to the new Econoline van, introduced last fall. Sales of Ford's entire van line were up 35 percent over last year. The restyled Flareside F-series pickup also contributed to the advance.

A number of high-volume car lines experienced declines in daily selling rates in mid-April. Buick sales were off 14.9 percent from last year, and Lincoln was down 10.7 percent.

On the other hand, daily selling rates rose 17.6 percent for Cadillac, 14.6 percent for Pontiac and 12.4 percent for Oldsmobile, although volume was about the same as last year. AN

Though Toyota will drop one shift, the decision is not expected to impact U.S. plans to introduce a Lexus model based on the Aristo.

Toyota feels squeeze, drops shift

RICHARD JOHNSON

Staff Reporter

TOKYO — Toyota Motor Corp. will eliminate an entire production shift next month for the first time since 1987, when the Japanese economy was being hammered by a rapidly appreciating yen.

The cut will affect production of Toyota's new Crown Majesta and Aristo luxury models. It will not impact plans to introduce the Aristo as a Lexus model in the United States during the 1993 model year, company insiders say.

Toyota President Shoichiro Toyoda said two-shift operations on one assembly line at the Tahara plant in Aichi Prefecture — producing Crown Majesta and Aristo — will be replaced by a single shift after the Golden Week holidays in early May.

The cutback is attributed to the economic slowdown in Japan, which has hurt sales of the two models. The Crown Majesta and Aristo were launched in the Japanese market last fall and are built on a new, highly automated line.

Crown Majesta sales totaled 18,121 in February and 19,154 in March, while Aristo's numbers were 1,600 in February and 2,412 in March. That compares with original projections last fall of 17,000 Crowns per month and 3,500 Aristos.

But Toyota officials say that February and March sales reflected orders entered during last fall's introduction, and they said orders have since slumped.

Through last week, the Crown-Aristo line was turning out 300 cars per day on double shifts, well under full two-shift capacity of 750 units, or 15,000 cars per month. The company did not specify what the build rate will be under one shift.

The cutbacks will be temporary, although the company did not say how long the second line will be shut down. To facilitate a quick return to double shifts, Toyota will alternate day and night shift operations instead of closing down one line altogether.

The Aristo is due to arrive in the United States as a Lexus model for the 1993 model year, slotting between the LS400 and ES300. Some Japanese analysts speculated last week that the reduction to one line could delay the planned Aristo introduction in the United States. But Toyota insiders say that will not happen.

Dealers are due to be shown the new Lexus in October, and the Aristo will go on sale some time during the 1993 model year. AN

Ford, GM try nationalism approach in regional ads

RAYMOND SERAFIN

Crain News Service

Ford Motor Co. and General Motors are stepping up regional ads and promotions that are aimed at winning back import buyers.

Both companies are trying to capitalize on recent "Buy American" sentiment by appealing to nationalistic feelings while touting product benefits and improved quality.

If successful, the campaigns could show up in other parts of the country.

In New England, Ford launched a $7 million campaign that is aimed at boosting sales of its high-volume Escort and Taurus models. The ads will run through May 11 in Maine, Vermont, New Hampshire, Rhode Island, Massachusetts, northern New York and most of Connecticut.

One key to converting an import buyer is demonstrating that he is "an intelligent purchaser if he drives" a domestic car, said Timothy Kelling, executive vice president and director of the auto division at W.B. Doner & Co. in Southfield, Mich. The agency created the ads.

The campaign includes three regionalized ads with personalized direct response cards in three Time Warner publications; 125,000 Taurus videocassettes mailed to Honda and Toyota owners; three test-drive incentives; and spot TV and radio advertising.

Page ads for Taurus, headlined "Now New Englanders have a safe place to put their money," ran in regional pages of *Time, People* and *Sports Illustrated*. Attached was a personalized card offering a free cellular phone or compact discs in return for a test drive in a new Taurus.

TV spots use the theme, "Ford makes it smart to buy American," focusing on safety, quality, styling and the Escort's pricing.

A second promotion, touted in TV spots, offered $100 to anyone who bought a Honda or Toyota after test driving an Escort or Taurus.

The third promotion is included in the video packaging, offering three videos for test driving a Taurus.

In the Washington area, GM dealers began a $1.5 million campaign April 19 that relies on customer testimonials to boost the image of its newest products.

Chevrolet's local agency, Demaine, Vickers & Associates of Alexandria, Va., won the assignment. It works with McCann-Erickson Worldwide, the GM corporate agency, and McCann/SAS, its affiliate that handles GMC Truck.

The four-week effort includes an unusual test drive program May 1-2 at a mall in suburban Tysons Corner, Va.

The GM effort, themed "The time is right," uses about two dozen 15- and 30-second spots cut from 300 interviews with purchasers, said Ron Vickers, executive vice president at Demaine Vickers.

The 30-second ads consist of a piggybacking of two fifteen-second spots for different brands. In one typical spot, a young mom describes how the standard anti-lock brakes on her Pontiac Grand Am stopped her "just in time" to avoid a crash. AN

No thanks, Toyota tells Rolls-Royce

MAURICE GLOVER
Special Correspondent

LONDON — After being rejected by Toyota Motor Corp., Rolls-Royce Motor Cars is likely to remain in the hands of Vickers PLC, the chairman of Vickers said last week.

Vickers has talked with Toyota and other potential buyers, but proposed purchase prices have been far below what Vickers expected, Chairman Sir David Plastow told shareholders.

He made the statement a day after Toyota Motor Corp. President Shoichiro Toyoda disclosed in Tokyo that Toyota has turned down a request from Rolls that Toyota acquire Rolls.

Toyoda cited a "lack of time" to respond to the proposition. He said Rolls "asked Toyota to make a quick decision."

Earlier this year, BMW AG was considered a leading contender to buy a stake in Rolls. Nissan Motor Co. Ltd. also has been the subject of rumors in Japan.

"I can't see the point in Toyota buying a luxury badge," said analyst Stephen Usher of Kleinwort Benson International in Tokyo. "The Japanese haven't played that game."

Last Thursday, Plastow told Vickers shareholders in London: "Our discussions with potential purchasers have ranged far and wide but, so far, the valuations put upon Rolls-Royce do not match the long-term value which we think it has to Vickers."

Rolls-Royce lost £60 million ($106 million) last year, but Plastow stressed that the company is "most definitely not" in permanent decline and has introduced new working practices that are far ahead of changes only now being talked about at other companies.

"These production methods have cut back the cost base, and the break-even volume has been brought down to less than 2,000 cars a year," he added.

Separately, Rolls-Royce's U.S. subsidiary announced it has has cut its field offices from six to four. ■

Staff Reporter Richard Johnson in Tokyo contributed to this report

ANNE E. WRIGHT
Chief Statistician

Although all Big 3 plants in the United States and Canada were closed last Monday for the contractual Easter holiday, car and truck production rose 4.3 percent over the prior week, which also was shortened by a holiday.

Last week's estimated daily build of cars and trucks in the two countries was 55,859, an increase of 4.3 percent over the prior week and up 20.5 percent from the corresponding week last year, which had five work days.

U.S. car production was estimated at 107,644 last week, an increase of 2.7 percent over the prior week but off 4.7 percent from the year-ago week.

So far this year, U.S. carmakers have assembled 1,746,826 cars, 1.8 percent ahead of the 1991 tally at this point.

Car production in Canada last week was estimated at 21,617, up 5.6 percent over the prior week but down 2.7 percent from the year-ago week.

Year-to-date, Canada car producers have assembled 319,879 cars, down 2.5 percent from the same period one year-ago.

U.S. truck production was estimated at 75,568 last week, up 4.1 percent over the prior week and down 4.3 percent from the same week one year-ago.

U.S. truckmakers have assembled 1,227,402 vehicles so far this year, up 27.2 percent from the same period one year-ago.

In Canada, estimated truck production last week was 18,607, up 13.8 percent from the prior week and up 5.5 from the year-ago week.

Since the beginning of the year, Canadian producers have built 357,091 trucks, an increase of 42.3 percent over this point last year.

Ford Motor Co. began production of the 1993 Lincoln Mark VIII last Tuesday at the Wixom, Mich., plant. The Lincoln Continental and the Lincoln Town Car are also produced at the plant.

General Motors scheduled overtime last Saturday at the following plants: Oklahoma City; Van Nuys, Calif.; Detroit; Oshawa, Ontario; and Scarborough, Ontario. In addition, the company ran overtime on the Suburban line at Janesville, Wis., and on the postal vehicle line at Moraine, Ohio.

Ford scheduled daily overtime last week at the Atlanta and Chicago car plants and the following truck plants: Kansas City, Mo.; Twin Cities (St. Paul, Minn.); Edison, N.J.; Louisville, Ky.; and the Econoline line at the Lorain, Ohio plant.

Chrysler Corp.'s Jefferson North Assembly Plant (Detroit), worked one shift last Saturday and is scheduled for one nine-hour shift each day this week.

Chrysler's St. Louis truck plant worked two nine-hour shifts last Saturday and is scheduled for three seven-hour shifts each day this week. ■

late news

Chrysler to lose Mitsubishi seat

TOKYO — Chrysler Corp.'s representative on the board of Mitsubishi Motors Corp. will be dropped at the annual meeting in June, according to press reports here.

The decision is a tacit admission that Chrysler intends to sell its last remaining 5.8 percent stake in the Japanese carmaker as soon as regulations permit, the reports say.

Chrysler staff in Tokyo would neither confirm nor deny the reports. The Chrysler seat is held by Jeffrey Higgs, managing director for Chrysler's North Pacific Operations.

Over the past two years, Chrysler has been selling what was once a 15 percent stake in Mitsubishi. It sold 43.6 million shares, or slightly more than 5 percent of Mitsubishi, in March of this year.

— *Mary Ann Maskery*

Mazda hikes price of MX-3

DETROIT — Mazda Motor of America Inc. last week continued its spring round of price increases by adding $250 to the sticker of the base MX-3 coupe. The tag now is $11,250. The price of the MX-3 GS coupe stays at $13,800.

Automotive News estimates that Mazda's spring price increase averages $735 per car, or 5.1 percent. The increase was made in three

GM sharpens platform ax

Nothing sacred in downsizing

JACK KEEBLER
and PHIL FRAME
Staff Reporters

General Motors product planners are wasting no time in turning sacred cows into hamburger following the corporate reorganization last month.

There already are plans to eliminate some big-car models, consolidate mid-sized cars on a single platform and even a proposal to build the Chevrolet Corvette on the same platform with the Chevrolet Camaro and Pontiac Firebird.

The corporate trick is to get all of these consolidations done without further eroding market share, angering dealers or pushing up the cost of popular low-cost models.

GM already has consolidated the groups of people who make up platform teams, but decisions on how to combine the hardware they oversee are still being made. Product planners are trying to consolidate individual models onto the same platforms without diluting their character to avoid the badge engineering problems of the early 1980s.

Minibus or megavan

In a design proposal obviously aimed at either Mercedes-Benz or BMW, Italy's Italdesign styling studios unveiled this 3-ton grand-tourer concept vehicle at the recent Turin International Auto Show. Called the Columbus, the 21-footer is powered by a 5.0-liter V-12 and seats eight. See show story on Page 22.

Nagging faults pursue Seville and Eldorado

PHIL FRAME
Staff Reporter

Cadillac and its dealers seem to have avoided serious consumer backlash from early quality problems on the Eldorado and Seville that resulted in at least 15 service bulletins.

The service bulletins have been sent to Cadillac dealers during the past two months. They cover problems ranging from rattles and noises to rough idling and stalling. The problems probably afflict few of the estimated 54,353 Sevilles and Eldorados (1992 models) built at the Hamtramck, Mich., assembly plant through April, said Cadillac spokesman William O'Neill.

"This is not that unusual when you start up a new model," O'Neill

Car models drop; GM chops 18

ndustry has 555, down 36 from '91

OHN K. TEAHEN JR.
nior Editor

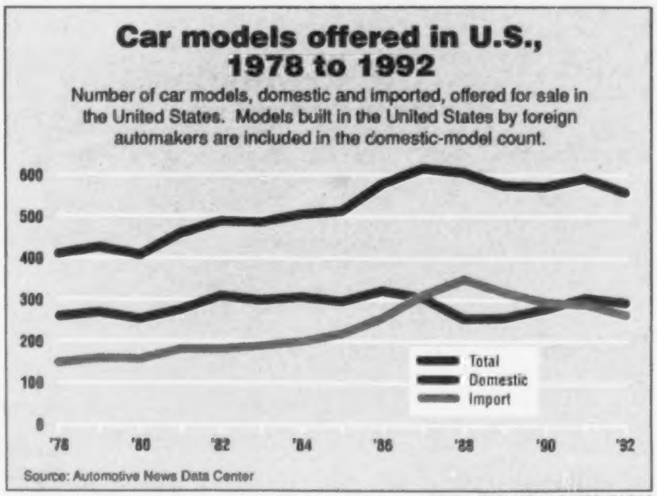
A major cut by General Motors nd the withdrawal of several imorts trimmed the number of car odels for the 1992 season.

The annual *Automotive News* tabation finds that the domestic and oreign manufacturers are offering 55 passenger-car models for sale the United States, down 36 from 91 at this time last year.

The total also is down from 569 r 1990. Models assembled in the nited States and Canada exceed nported autos for the second raight year after a four-year import edge.

Car models offered in U.S., 1978 to 1992

Number of car models, domestic and imported, offered for sale in the United States. Models built in the United States by foreign automakers are included in the domestic-model count.



Source: Automotive News Data Center

DAVID L. BURHANS / AUTOMOTIVE NEWS

The current figure of 555 compares with a post-World War II peak of 614 in 1987. The all-time high was 621 in 1928.

The model count was compiled for the 1992 *Automotive News Market Data Book,* which will be published May 27. Totals for individual domestic and imported makes, nameplates and corpora-

Tax deal nears on warranty rule

CHARLES M. THOMAS
Staff Reporter

A change in the tax code could be on the way for thousands of recession-weary dealers vulnerable for millions of dollars in back taxes on the sale of extended service contracts.

Lawyers representing independent extended service contract administrators and the National Automobile Dealers Association are working out a plan that could give dealers some relief on the issue of how to treat extended service contracts for tax purposes.

"Details of this agreement are still being discussed," said Richard Strauss, NADA president. "There are some areas that we still have to negotiate."

An agreement also would help independent extended service contract administrators whose businesses are threatened under the IRS advisory that says extended service contracts should be treated as prepaid insurance.

Dave Robertson, who is coordinating efforts on behalf of the extended service contract administrators, said the IRS has shown a willingness to work with the industry on the issue.

He said discussions are under way with the IRS that may allow dealers to match costs with revenues over the terms of the extended service contracts for tax purposes rather than take the income from the sale in the first year and amortize costs over the term of the contract. "If the plan is adopted by the IRS, dealers will avoid a large tax hit in the year the contract is sold,"

Subaru lavishes attention on Loyale

Here is a spy photo of the replacement for the Subaru Loyale, which is expected to be introduced late this year as the Leone in Japan and in the 1994 model year in the United States. The current Loyale's angular, boxy styling is replaced by more aerodynamic lines, including a steeper rake for the windshield. Four-door sedans and wagons will be offered. This sport version has a 16-valve four-cylinder engine that develops about 250 horsepower.

stages and includes the pricing of the new MX-6, RX-7 and 626 lines, which Mazda is marketing as 1993 models.

Right-drive Taurus planned

WASHINGTON — Ford Motor Co. will begin building right-hand-drive versions of Ford Taurus and Mercury Sable models for export to Japan, says Allan Gilmour, executive vice president of Ford.

Gilmour did not mention a production date but said the company also is considering right-hand-drive versions of some of its truck lines as well.

Gilmour, in a speech to the SAE here Thursday, said he does not expect the new versions to make much of a dent in the U.S. trade deficit with Japan.

He challenged the notion that the lack of right-hand-drive vehicles has kept the Big 3 from selling more cars there. "It's somewhat of a false issue," he said.

For real gains to be made, the federal government will have to help open up Japan's markets, he said.

Renault ties benefit Volvo

GOTHENBURG, Sweden — Volvo Group's earnings from its share cross-holdings with France's Renault SA will be double what the two companies projected when they formed their alliance, Volvo President Christer Zetterberg told shareholders at the annual meeting last week.

Zetterberg, who turned Volvo's presidency over to Soren Gyll at the meeting, said the company now expects to earn 4 billion kroner (about $665 million) a year from Renault from 1995 onward, compared with an earlier forecast of 2 billion kroner a year.

The two companies are linked through a web of minority shareholdings in one another's parent companies and car- and truck-making subsidiaries. Additionally, the two are increasingly sharing the cost of new-product development and parts acquisition.

Edict hinders Clean Air rules

WASHINGTON — President Bush's moratorium on new federal regulations isn't supposed to effect the auto industry. But federal officials say it has had an impact by slowing down rules to implement the 1990 amendments to the Clean Air Act.

Last Wednesday, Bush extended his January moratorium on new regulations for another four months. He said the moratorium would not cover regulations affecting safety and those mandated by law, such as the Clean Air Act.

Officials of the National Highway Traffic Safety Administration said the moratorium has not slowed efforts to implement safety rules in last year's transportation bill.

But at the EPA, now trying to implement the new Clean Air Act rules, the process has "slowed substantially," said Donald Zinger, assistant director of EPA's Office of Mobile Sources. "The rules will still get out, though at a slower pace."

He said the chief hangup has come in getting EPA's proposed rules approved by the White House.

Subaru recalls Legacy wagons

CHERRY HILL, N.J. — Subaru of America is recalling about 9,500 1992 Subaru Legacy station wagons to inspect for a possible fuel tank leak.

Subaru said the affected wagons were built between July 1991 and Jan. 14, 1992, by Subaru-Isuzu Automotive Inc. in Lafayette, Ind.

The fuel tank may have been punctured during vehicle assembly, which could result in leaks or a fire.

Ypsilanti fights GM closing

ANN ARBOR, Mich. — Ypsilanti Township filed a lawsuit against General Motors last week to force the automaker to keep its Willow Run assembly plant open.

In February, GM announced it would transfer the assembly of large, rear-wheel-drive cars to its Arlington, Texas, plant.

Township officials said the wording of tax abatements granted to GM in 1984 and 1989 for new machinery guarantee that the plant will remain open until at least June 2003. The suit seeks a restraining order forcing GM to keep the plant open while the abatement case is decided.

Paula Powell, a GM spokeswoman, said the only determining factor in keeping a plant open is sales of the products it makes.

Powell said Michigan's abatement law allows corporate tax breaks of up to 50 percent for up to 12 years. But she said even if a 12-year abatement is granted, GM is not obligated to stay.

— The Associated Press

GM plant seeks cancer findings

LORDSTOWN, Ohio — General Motors workers here are anxious for the results of a cancer study begun at local GM plants three years ago.

The GM-UAW study might show a cancer risk above norms in the general public, according to a Cleveland newspaper report last week.

The Plain Dealer, citing a source it did not identify, reported that the first draft of a final report was completed nine months ago. The draft supports a 1989 preliminary finding that said workers at the Lordstown stamping and assembly plants have rates of certain types of cancer higher than those in the general public, the newspaper said.

Dr. Douglas Van Brocklin, GM director of occupational safety and health, said the final report will be completed in a few weeks.

— The Associated Press

briefly

Chrysler sows wild rice

Chrysler Corp. is asking Chippewa Indians for help with an environmental effort. The company is building a seven-acre "replacement wetland" at its Chelsea, Mich., proving ground. The original four-acre wetland was disturbed when a new handling road was created in 1989. Chrysler asked the White Earth Reservation Tribal Council of White Earth, Minn., to provide 75 pounds of wild rice seed which was once native to the area. Chrysler also has received the EPA's Administrator's Award for progress and innovation in pollution prevention design at its new Jefferson North assembly plant. Chrysler's win in the large business category is a first for an automotive company.

FOR THE BIRDS — The **Chrysler** Technology Center is about 30 percent occupied, and last week locator signs were posted inside. It wasn't always easy for the early occupants. Martha Wallace, manager of the pilot production plant there, noted that when her 3.6-acre room was closed in, some birds were living in the rafters. "We used to joke about leaving bread crumbs behind us as a trail to find our way out, and the birds would come down and eat them." By the way, the birds were safely lured outside with an offering of bird seed.

WILL IT BUILD SALES? A **Ford Motor Co.** assembly plant near San Jose, Calif., will be the site of a manufacturers' discount mall. Ford Motor Land Development Corp. has teamed up with a developer to refurbish the 1.3-million-square-foot plant. The scheduled opening is fall 1994. The plant, in Milpitas, Calif., closed in 1983.

HENRY WOULD BE PROUD — Some things never change. Following up on experiments by the late **Ford** founder Henry Ford, the No. 2 automaker says it will switch to soy ink from petroleum ink for most of its printing projects. The company says not only is soy ink less polluting than petroleum-based ink, but the use of soy will help American farmers who produce soybeans. William Clay Ford Jr., great grandson of Ford and a company executive, said in a statement that his great grandfather experimented with potential uses of soybeans throughout his lifetime. "His vision is still valid," Ford said.

TRIPLE THREAT — **Chevrolet** General Manager Jim Perkins shared this theory on increasing sales: "A guy told me one time years ago, when you can't appeal to a dealers' greed anymore you appeal to their ego, and if that doesn't work, you throw dirt in their face because they're dead."

PERKINS, PART II — Jim Perkins theorized on why Chuck Jordan, **GM's** vice president in charge of design who is retiring in October, allowed **Chevrolet** to showcase classic Corvette concept cars at a recent event in San Diego: "We all have a little trepidation when we have to face Chuck Jordan about something like that because Chuck can really be a nice guy and he can decide at times he's not going to be a nice guy. But there's a theory about his retirement: He needs people to come to his party."

Jordan: needs to pad guest list

CAFE average improves after 2-year decline

MAX GATES
Staff Reporter

WASHINGTON — The nation's new car fleet reversed a two-year slide in fuel economy in the 1991 model year and improved by 0.3 mpg to 28.3 mpg, the government says.

But hold the trumpets. The gain came primarily from one automaker, Ford Motor Co. And Ford's numbers rose because of an extended model year for its fuel-efficient Escort/Tracer and a shorter model year for its thirstier Crown Victoria/Grand Marquis. In all, Ford's corporate average fuel economy average for domestic cars increased 1.4 mpg.

Still, two-thirds of 21 manufacturers improved their CAFE rating in the 1991 model year, the National Highway Traffic Safety Administration said in its 16th annual report to Congress on fuel economy. Those 14 companies accounted for 70 percent of the cars sold last year, NHTSA said.

The Big 3 combined improved 0.5 mpg for all cars classified as domestic, rising to 27.4 mpg. The fuel economy of imported cars, including those sold by the Big 3, remained at 29.8 mpg, the same as the 1990 model year, NHTSA reported.

As a result, the CAFE gap between domestic and imported cars shrank to its narrowest point ever, a 2.4 mpg difference, the agency said.

The overall fuel economy of light trucks also improved last year, increasing from 20.7 mpg to 21.3 mpg. Domestic trucks improved 0.7 mpg to 20.9; imported trucks stayed the same at 23.0 mpg.

Passenger car manufacturers are required to achieve an average of 27.5 mpg.

The light-truck standard of 20.2 mpg will rise to 20.4 mpg in the 1993 model year and 20.5 mpg for 1994.

While Ford's domestic fleet jumped 1.4 mpg to 27.7, Ford imports improved 1.6 mpg to 34.0. Both the domestic and imported fleet improvements were the result of model changes, said David Kulp, manager of Ford's fuel-economy planning and compliance department.

When Ford began building its new Tracer subcompact in Mexico in early 1990, the car joined Ford's domestic CAFE fleet because it had more than 75 percent North American content. The previous Tracer had less than 75 percent content and was classified as an import.

Saturn now tells dealers to wait on new stores

PHIL FRAME
Staff Reporter

After telling its dealers just two months ago to speed development of additional stores, Saturn Corp. now is asking them to slam on the brakes.

There is no production problem at the plant in Spring Hill, Tenn., that is limiting supply of cars, said Donald Hudler, vice president of sales, service and marketing. The plant is building more cars than it was two months ago, while internal quality audits have improved, Hudler said.

Hudler's reason for delaying new points: 98 percent of Saturn's dealers are profitable, and the ones that aren't have not had time to be — they've been open less than 90 days.

Who would want to tamper with a near-perfect record of profitability?

"We've gone through this great dilemma: 'What's the right number of stores?' " Hudler said.

Saturn had been worried that cars would stockpile at the 2,450-acre Spring Hill manufacturing complex after workers agreed to step up production by adding a day of overtime to their work week.

At February's National Automobile Dealers Association convention in Dallas, Saturn officials asked the retailers to expand more quickly so the plant workers who voted overwhelmingly for the extra work day wouldn't feel their commitment was in vain. Originally, Saturn did not plan to add the fifth work day until next year.

❛ We're just altering the timetable. ❜

DONALD HUDLER
SATURN VICE PRESIDENT

In February, the plant produced 900 cars per day on two 10-hour shifts, five days a week.

Now, the plant is building 925 to 930 cars per day, about 82 percent of its capacity of 1,125 to 1,130 cars. Some days, the plant has built 1,000 cars, Hudler said.

Nonetheless, current capacity is 120 to 125 cars fewer than the 1,250 per day Saturn had planned to have at this point, according to a 1990 production plan. Based on the 1990 plan, Saturn anticipated building 21,250 cars in April 1992 using a four-day week with two

A KINDER, GENTLER TOYOTA

Criticism prompts more discreet posture

RICHARD JOHNSON
Staff Reporter

TOKYO

Toyota Motor Corp. executives in Japan are anxious to move the carmaker out of the line of fire in the United States.

Executives here say they recognize that Toyota, amid increasing criticism of Japanese business practices worldwide, must adopt a more discreet posture in the United States.

"Certainly, compared to 10 or 20 years ago, we are seeing more pressure and allegations," said Toshiaki Taguchi, general manager of Toyota's North America Division, in a recent interview in Tokyo.

Toyota still aims to sell 1.5 million vehicles a year in the United States, Taguchi said, but the previous mid-decade target date is now fuzzier.

"Probably the growth pattern will not be as steep as we once wished," said Taguchi, who oversees marketing activities in North America and has done two stints in the United States.

Growth will be slower and will be balanced with other considerations, Taguchi said.

"It's now a new world. Japan's relationship with the United States and the European Community is different from what we have seen in the past," he said.

"We naturally have a certain long-term commitment and objectives, but we are a flexible company. In North America and Europe, we want to be regarded as good corporate citizens."

Taguchi said Japanese carmakers overall will be hard-pressed to maintain their 30 percent share of the U.S. passenger-car market. The American carmakers will be the biggest beneficiaries when the market recovers, and they know it, he said.

Taguchi said the sharp decline in the market and soft U.S. economy has led to the current political climate, which he described as "the most difficult time for us." But, he said, "the pendulum is shifting."

"When the market comes back, we know — and I think the Big 3 know — that . . . most of the additional sales in 1993, 1994 and 1995 will go to the domestics," primarily because Japanese makers do not have the capacity of the Big 3 companies.

Taguchi projects a U.S. passenger-car market of 10 million to 11 million units by mid-decade, an assumption that would require Japanese sales of about 3.3 million units to maintain their current 30 percent share.

"If Japanese brands as a whole reach that level, it would be a very fantastic job," he said. "Personally, I think 30 percent-

see TOYOTA, 33

HIDDEN IMAGE/HANS G. LEHMANN

In March, Toyota said the new pickup would go on sale this year. Now, it says a decision has not been reached.

Toyota backtracks on mid-sized pickup

RICHARD JOHNSON
Staff Reporter

TOKYO — Toyota Motor Co. executives stressed here last week that the company still has not decided to build an intermediate pickup truck — despite pronouncements by the company's U.S. sales arm.

Officials of Toyota Motor Sales U.S.A. Inc. said in March that the company will bring in a mid-sized pickup late this year for sale as a 1993 model.

"We are studying intermediate trucks right now," Toshiaki Taguchi, general manager of Toyota's North America Division, said last week. "(We're) close to coming to a decision."

But he stressed that any "final decisions" have not been made.

"We are still trying, hopefully, to be able to offer (a pickup) to the American public in the near future. (But) final, final decisions — we are still waiting."

Toyota's desire to enter the 110-inch-wheelbase-and-up truck class is spurred by falling sales of its current model. But entry into a larger pickup segment also would exacerbate trade friction, since it would target one of the last strongholds of the U.S. Big 3.

"It is a difficult decision," said Taguchi. "We appreciate this is a sensitive product area. While it is not direct competition to the full-sized American trucks' performance — the specifications are different — we are still very cautious at this time."

The Toyota truck would fit between such compact models as the Ford Ranger and full-sized trucks like the Ford F series and General Motors' C/K line. The Toyota truck is expected to be offered with a V-6 initially and a V-8 option later.

Taguchi said production of a new pickup "most likely" would begin in Japan and shift later to the United States.

"Consideration will be given to find a way to build it in America," he said.

Many expect that the intermediate pickup truck will eventually be built at New United Motor Manufacturing Inc., the Toyota-General Motors joint venture plant in Fremont, Calif.

The joint-venture agreement ends in 1996, and it is believed that Toyota will acquire control of the plant at that time. Toyota began building compact pickups at NUMMI last year.

But Taguchi said it is too early to discuss Toyota's NUMMI intentions: "That is still about four years away. When the time comes, Toyota and General Motors will figure it out." ■

GM, Ford profitable but cautious

CHARLES M. THOMAS
Staff Reporter

General Motors and Ford Motor Co. posted meager first quarter profits after a long and crippling earnings drought, but company officials aren't celebrating yet.

Officials from both companies expressed cautious optimism, saying there is a long way to go to improve financial performance in North American operations despite modest gains in the economy and a moderate increase in vehicle sales.

Chrysler Corp. reported a net loss of $13 million in the first quarter, citing new-product launches and the weak economic rebound.

Without the sale of some shares in Mitsubishi Motors Corp. for a profit of $88 million, and changes in accounting methods which gave the company a one-time gain of $218 million, losses at Chrysler would have been deeper.

The Big 3 said higher retail sales, fewer fleet sales, cost-cutting and lower marketing expenses bolstered earnings.

Analysts weren't surprised that GM reported profits despite a consensus earlier in the year that the beleaguered automaker would lose money in the first quarter.

FIRST QUARTER FINANCIAL RESULTS

	Total sales (millions)	Net income (millions)
GM	$32,043.00	$179.3
Ford	$24,557.50	$338.0
Chrysler	$ 8.19	$ (13.0)

Source: Manufacturers

For the last month, GM officials had hinted at a turnaround. Yet, analysts declined to predict what is ahead for the automaker because GM has announced plans for a public stock offering — the largest in U.S. history — to raise upward of $2.4 billion. The offering will enhance GM's balance sheet and credit ratings, which have been downgraded in recent months. Plans call for an issue of 50 million shares of common stock.

GM had a net profit of $179.3 million on revenues of $32.0 billion in the first quarter, breaking a six-quarter string of earnings losses.

This compares to a 1991 first quarter net loss of $144 million, which GM has now restated after taking advantage of $942 million in accounting changes and the sale of its New York office tower.

In first quarter 1991, GM had reported $1.1 billion in losses.

"The corporation's positive $1.3 billion improvement in earnings, excluding non-recurring items, is due principally to improvements in our North American automotive operations," said Chairman Robert Stempel. He said operations benefitted from increased factory sales to dealers, manufacturing efficiencies, lower incentives, reductions in raw material costs and a better retail-fleet mix.

Still, GM's North American operations suffered a loss of nearly $1 billion, said one analyst.

The automaker's subsidiaries continued to steam ahead. General Motors Acceptance Corp. reported first quarter earnings of $354 million. Electronic Data Systems Corp. posted record profits of $133 million and GM Hughes Electronics Corp. posted earnings of $181 million in the first quarter.

FORD

Ford earned $338 million on revenues of $24.5 billion, compared with a 1991 first quarter loss of $884 million. It was the first profitable quarter for the automaker since third quarter 1990.

"Dealers and retail customers are ordering vehicles at a much greater pace," said David McCammon, treasurer and vice president of finance. But he said the "profit level is below what is required in the long run."

The automaker's cost cutting and reduction in marketing expenses gave a boost to earnings. McCammon said marketing costs as a percent of revenue fell to 13 percent from 17 percent a year ago.

Incentives dipped to $1,000 per vehicle in the first quarter compared to $1,150 in the fourth quarter. And he said there has been a switch from fleet sales to retail sales which boosted profits.

McCammon said the company lost money in Australia and South America in the first quarter. And Jaguar continues to be a drain on the corporation.

Ford's worldwide automotive operations earned $85 million in the first quarter, compared with losses of $1.2 billion a year ago. U.S. automotive operations earned $57 million compared with losses of $947 million a year ago.

The financial services group earned $253 million, down 18 million from a year ago.

Ford Motor Credit Co. reported earnings of $210 million, down 12 percent from the all-time record in the first quarter 1991.

CHRYSLER

Chrysler officials said costs associated with the launch of the Dodge Viper, Jeep Grand Cherokee and preparations for the upcoming LH launches hurt profits.

Although the company reported a net loss of $13 million on revenues of $8.19 billion for the first quarter, without the accounting change losses would have been $231 million.

For first quarter 1991, Chrysler reported a net loss of $598 million, including a change in the way it accounts for incentives.

Chrysler Financial Corp.'s first quarter earnings of $111 million included a one-time gain from an accounting change.

Bushell pleads guilty in DeLorean case

EDWARD LAPHAM
Managing Editor

Former Group Lotus Chairman Frederick Bushell last Thursday pleaded guilty in Crown Court in Belfast, Northern Ireland, to one count of conspiracy to defraud DeLorean Motor Cars Ltd. Bushell, 64, is scheduled to be sentenced June 12.

Bushell pleaded guilty to conspiring with one-time automaker and former General Motors executive John DeLorean and Lotus Cars founder Colin Chapman to defraud the government-backed automaker of $17.65 million. Bushell alone was charged because the U.S. government has declined to extradite DeLorean, and Chapman died in December 1982.

The British government brought charges against Bushell in July 1989 after documents showed that $490,000 in project funds had been diverted to a Swiss bank account in Bushell's name.

In 1978, the British government agreed to fund a Belfast factory for DeLorean's stainless steel gullwing sports cars. Output began in February 1981, but the project collapsed into bankruptcy in 1982. Fewer than 10,000 cars were built.

The British government, and earlier the U.S. government, charged that DeLorean, Bushell and Chapman used a spurious Swiss firm to divert $17.65 million intended for research and development. Of the missing money, $12.5 million was raised by U.S. investors and $5.15 million was part of the British government's $140 million economic package.

In 1986, DeLorean was acquitted of related fraud and racketeering charges after a three-month trial in federal court in Detroit.

DeLorean is still wanted in Britain on fraud charges and will be arrested if he sets foot on British soil, according to the Serious Fraud Office in London.

The receivers of the bankrupt Belfast manufacturing company have continued efforts to recover the government's investment.

John DeLorean and Lotus Cars, now owned by General Motors, have settled civil lawsuits. A civil lawsuit is pending in London against Bushell and Chapman's estate.

The receivers also have a $450 million lawsuit pending against accounting firm Arthur Andersen, which audited the DeLorean project. The suit in federal court in New York charges that the accounting firm should have been able to uncover the fraud. Former British Prime Minister Margaret Thatcher was subpoenaed and earlier this year gave a deposition in that case.

FORD PROBE FOR 1993

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (pounds)	Base engine	Drive type	Body styles
Base	102.9	178.9	69.8	51.6	2,619	2.0L, DOHC, I-4	fwd	3-dr.
GT	102.9	178.9	69.8	51.8	2,815	2.5L, DOHC, V-6	fwd	3-dr.

Sculptured '93 Probe gets more features

KATHY JACKSON
Staff Reporter

The 1993 Ford Probe's motorized seat belts are eliminated with the addition of standard driver-side airbags; anti-lock brakes are optional.

LOS ANGELES — Ford Division officials won't be specific, but they say there won't be much of a price boost when the 1993 Probe bows July 9.

The price will increase to account for added equipment such as a standard driver-side airbag and a bigger engine, but on a comparable equipment basis, Ford plans to hold the line.

INTRO-'93

"There will be good value," said Jim Padilla, small-car segment director for car product development. Pointing to a Honda Prelude, one of Probe's competitors which retails for $16,550 with standard driver-side airbag, Padilla said Probe's prices "will be much lower than that."

Base prices of the 1992 Probes range from $12,257 to $14,857.

For 1993, Probe will offer two models rather than its current three — a base model and a GT.

The new models are lighter, quicker, offer 3 mpg better fuel economy and have a more cab-forward look than their predecessors. More safety features are offered.

The base model is powered by a 2.0-liter, dual-overhead-camshaft 16-valve four-cylinder engine that generates 115 horsepower, compared to the 110 hp the current base models put out.

The GT gets a 2.5-liter, dohc 24-valve V-6 that delivers164 hp. The 1992 LX and GT turbocharged models generate 145 hp.

To achieve the more cab-forward look, Ford designers reduced the cowl height three inches and pulled the base of the windshield forward four inches.

On the inside, there is a new design with a wraparound instrument panel. The center console armrest with storage area and cup holder is standard on the GT and optional on the base model.

Jon Baker, Probe program manager, says Ford expects to sell 150,000 Probes by the end of the 1993 calendar year, with 35,000 of those sales exports.

Another goal is to decrease fleet sales as a total percentage of Probe deliveries. Steve Odell, marketing plans manager for Ford Division specialty cars, says the current mix is about 60 percent retail, but the division would like to increase retail to 70 percent or 80 percent.

Chrysler sees 250,000 minivan sales in Europe by mid-'90s

DIANA T. KURYLKO
Staff Reporter

GRAZ, Austria — Chrysler Corp. expects to sell 200,000 to 250,000 minivans a year in Europe by the mid-1990s, supplying at least half the volume from its new plant here, Chairman Lee Iacocca said last week.

"The first-generation Voyager in 1984 assured our survival in the United States, and the second generation, I think, will assure our survival in Europe," Iacocca said at the dedication of the Eurostar plant, a joint venture with Steyr-Daimler-Puch GmbH.

Chrysler has half the minivan market in the United States, and "I hope we can do 50 percent here," Iacocca said.

He said the European minivan market will easily expand to 800,000 units a year by 1999 from about 75,000 to 80,000 in 1991.

His forecast is based on Chrysler's rapid penetration of the European segment. In four years, Chrysler has captured 21 percent of the European minivan market, and that was accomplished with imported minivans and no diesel engine, Iacocca said.

Because of the diesel's popularity in Europe, where gasoline engines above 2.0 liters are heavily taxed, Chrysler will install a new Italian-built turbodiesel engine in the Voyager. Production of the 2.5-liter diesel Voyager began last week, and Iacocca said he expects it to account for 60 percent of the production at Eurostar.

The new $2.2 billion Eurostar plant has a production capacity of 50,000 units a year and can be expanded to 100,000 without a major addition to the facility, Chrysler says.

That capacity would imply the need for Chrysler to import as many as 150,000 minivans a year from North America if Iacocca's projections are on target. Chrysler's two minivan plants in North America are operating near capacity, and it is not clear where the additional units would come from.

Several of Chrysler's distributors attending the dedication ceremony said they doubted that Iacocca's sales projections could be met. They said the company lacks the extensive European dealer network of its competitors, particularly Renault, maker of the top-selling Espace minivan.

Chrysler is likely to have 1,500 dealers in Europe by next year. But the company started selling in Italy — the second largest market in Europe — only last month.

Great Britain, also one of the biggest markets, will get left-hand drive Jeeps beginning in October. But there are no plans to sell the Voyager in the United Kingdom.

A distributor has yet to be signed in Spain, another major market.

Iacocca also confirmed that another vehicle, possibly a Jeep, could be built at Eurostar by expanding the plant.

Toyota trims build at advanced Tahara plant

Japan sales slump forces shift cut

MARY ANN MASKERY
Staff Reporter

TOKYO — Toyota Motor Corp.'s decision to trim production because of slumping demand in the home market has hit its newest and most advanced plant.

Officials say they don't know when the plant, designed to build more cars more efficiently, will now be able to prove its mettle.

The addition to the Tahara plant was built at a cost of more than 50 billion yen (about $380 million). The addition started up last fall with the introduction of the new Crown Majesta and the Aristo.

The plant, which has an annual build capacity of 396,000 units, had been operating on two shifts. But Toyota cut production to one shift at Tahara's No. 4 assembly plant two weeks ago, and has slowed assembly on other lines.

Analysts say the move could affect Aristo production and derail plans to ship it to the United States. The Aristo is widely expected to be exported to the U.S. market as a new Lexus.

Toyota will not say how long the one-shift operation will continue at Tahara. Until it returns to full capacity-use, however, several labor-saving innovations that Toyota officials call world firsts are going to waste.

For one, the plant houses a 5,200-ton stamping machine that Toyota says is the biggest in the world. The unit can turn out side panels as long as 13.2 feet, and can handle metal sheets of varying thickness at the same time.

In addition, operations for brazing, finishing and fitting of doors, hoods and luggage lids are fully automated, believed to be a world-first.

Other companies have developed automated fitting operations, says Tahara General Manager Kazuhiro Sadamura, but "we believe we are the most advanced."

On final assembly, robots are used to attach engines to chassis, and to position wheels and seats. Robots also install air conditioning units, considered another industry first.

Toyota, which has not relied heavily on automation, averages just 5 percent on final assembly in most of its plants. The ratio at the new plant, however, is about 15 percent.

But Sadamura says the percentage of automation is unimportant.

"In the past, we attached importance to the percentage of automation," he says. "But recently, we have come to think of the figures as meaningless."

Instead, Sadamura wants to emphasize effects in the work place. The object of more automation, he says, "is to improve the environment by eliminating difficult work."

Besides a better work environment, another goal of the new technology is improved quality. Posters in the plant advise workers and visitors of "the relentless pursuit of perfection."

Hiromitsu Hayashida, Toyota's general manager of manufacturing, says the new automation, particularly in the fitting process, has reduced the need for make-overs by 30 to 50 percent.

And since many of the procedures are handled by robots rather than human hands, the damage from scratches has been cut by 50 percent.

When all of this will be put to use in full production is not clear.

Says Sadamura, "That depends on the economy."

TOYOTA

North America chief sees pendulum shift

continued from PAGE 3

plus of an 11 million-car market will be very difficult to attain."

While the new cap of 1.65 million units on Japanese exports to the United States, which was agreed to April, "will not damage our operations," Taguchi said it will limit flexibility when the market demands more cars.

"If the market goes up and the supply capacity of the domestics is not in line with demand, I think American consumers may face a shortage of certain models," he said.

Toyota had already backed off from its long-standing goal of selling 1.5 million units in the United States by the middle of the 1990s.

"I know that in '92, '93 or '94 it will be very difficult to reach that level of sales," said Taguchi. "But our philosophy is not just volume, but how to make our operation more Americanized and also make our dealers more competitive."

Taguchi, rebutting recent press reports, also insisted that adopting a lower profile in the United States has nothing to do with the personalities who will take over U.S. sales operations next month.

Next month, Yale Gieszl, 50, will succeed Robert McCurry as executive vice president of Toyota Motor Sales U.S.A., and Shinji Sakai, 55, will succeed Yuki Togo as president.

Togo, who is 67, will become chairman; the 68-year-old McCurry will become vice chairman.

"Mr. Sakai and Mr. Gieszl may seem from the outside like a big change," said Taguchi.

"Their style of speech or communication may be different, but the basics will be the same. Even if Mr. Togo and McCurry were still in the driver's seat, this is an era in which we are becoming more sensitive."

Taguchi said McCurry and Togo's new duties will be announced in early June.

McCurry will not be active in day-to-day operations, but will have "a different role," Taguchi said. However, even with the strong-willed McCurry out of the daily picture, Toyota's Japanese managers say they will not use the opportunity to exert more influence on U.S. operations.

"Frankly, I don't see it," said Taguchi. "Toyota U.S.A. has certain responsibilities and . . . authority, and I think Mr. Sakai and Mr. Gieszl will continue (to exercise them)," he said.

Taguchi said Toyota USA would become "more sensitive and more responsive to the needs of society . . . even if Mr. Togo and McCurry hypothetically were still in the same positions."

And he said that Togo and McCurry had been "advocating more Americanization, more involvement in America, like manufacturing and engineering, while promoting our sales very strongly."

Taguchi said that the 1.5 million goal was only "one part" of the company's vision of how to be a better company in America.

"It is not a set, fixed objective," he said. "So we will try to be a better company. And if the market grows, and there is a more harmonious relationship in the industry . . . in the long-term we may be able to reach that."

In setting that goal for the United States, Toyota officials in the past had said that half the total would be built locally.

Toyota is now set to reach a North American production capacity of about 700,000 units a year by mid-decade. That would expand if the company takes 100 percent control of its New United Motor Manufacturing Inc. joint venture in Fremont, Calif., with General Motors in 1996.

Taguchi said, however, that the company sees no need for additional capacity in North America.

"Not right now," he said. "We are trying to maintain the 1 million-plus volume sales for the Toyota and Lexus franchises combined, and reasonable growth."

Over the long-term, Lexus sales in the United States may grow faster than Toyota, he said.

"We sold about 70,000 Lexus last year, so we are hopeful that we will be able to go over 100,000 by the mid-'90s," he said.

That is a more cautious view than U.S. estimates that the 100,000 figure can be reached this year. Taguchi doesn't think that will happen in 1992.

He also said that the current U.S. dealer count — 1,180 Toyota points and about 150 Lexus dealers — is adequate.

"We are pretty well covered," he said. "Lexus may need some more smaller points (in more rural markets), but in the major cities we are covered. But volumewise, we won't add so many."

This year, Taguchi said he hopes Toyota will do "a little better" than its 1991 sales of 1,004,000 vehicles in the United States.

"I think our overall business is doing very well in very soft market conditions," he said.

Although Toyota joined most other Japanese makers in raising U.S. prices last month, Taguchi said it is too early to gauge the impact on sales.

One Tokyo auto analyst, Koji Endo of S.G. Warburg Securities, speculated recently that the Japanese may raise prices twice more in 1992.

But Taguchi hopes it doesn't happen.

"The exchange rate was one of the strong factors in the pricing of our products, and the yen has since come back to the 133 level from 125," he said.

"Any pricing action will depend on the situation, but personally I hope we will be able to go into the 1993 model year with today's prices."

Taguchi said the political climate was only "a very small factor" behind the price increase. "We are doing business."

Car sales jump 52.1% in Mexico

MEXICO CITY — Vehicle sales boomed in Mexico in March, led by a 52.1 percent increase in car sales.

Mexico's Big Five automakers sold 66,472 cars and trucks in March, a 39.8 percent gain over March 1991. But much of the surge can be explained by a rule change that ended tax deductions for company-provided cars, said Carlos Lukac, a vice president with the Booz-Allen Hamilton Inc. consulting firm in Mexico City.

Mexican firms have freely issued cars to white-collar employees as a form of compensation, Lukac explained. But beginning March 1, companies can take the tax deductions only on vehicles that stay on company property overnight.

As a result, many white-collar employees who used to have company cars went shopping for their own new cars in March, he said.

The biggest gains were posted by General Motors and Chrysler; each jumped about 90 percent from 1991. Ford, Nissan and Volkswagen also had very strong months.

Mexican production kept pace. The Big Five's car and truck output for the Mexican market rose 45.9 percent. Their export production, most headed for the United States, rose 55.6 percent.

Service pros laud '92 Eldo, Seville

DALE JEWETT
Service Editor

The longest look service managers at many Cadillac dealerships are getting at 1992 Sevilles and Eldorados is the period from when the cars are unloaded from the transporter to when they are delivered to the buyer.

Cadillac service bulletins

- Cracking of front outside door handles
- Bumper fit
- Door rattles (Eldorado only)
- Loose sun visor mounting
- Creaking noise from body mounts (also on Allante)
- Condensation in rear taillamps (Seville only)
- Water dripping into trunk from license plate cover (Eldorado only)
- Roof panel noise (only Sevilles without sunroof)
- Noisy lumbar motors
- Intermittent stalling, rough idling, engine hesitation (1990-1992 models, including DeVille and Fleetwood)
- Intermittent no-start (1989-1992 models, includes Allante, DeVille, Fleetwood)
- Interior window fogging
- Excessive brake pedal travel to activate brake lights or disengage cruise control (also on Allante)

"The new cars have made life a lot easier than the ones Cadillac was building in the mid-'80s," says Phil Lynch.

Contacted late last week, more than a dozen service managers around the country praised the initial quality and reliability of the new Cadillacs. None reported any serious problems.

Nor were any service managers alarmed by the fact that Cadillac has issued several service bulletins in recent months relating to problems with the Eldorado and Seville.

"I've gotten used to seeing a lot of bulletins," said Ken Presswood, service manager at Lone Star Cadillac in Dallas. "Sometimes I feel we kind of get bulletined to death, but it shows how sensitive the manufacturers are to quality and getting problems fixed quickly."

Ricky Pope, service manager at Cobb Pontiac-Cadillac in Montgomery, Ala., said service bulletins are common. "We kind of expect a lot of bulletins, not only because it's a new car but because it doesn't have to be a big (repair) issue for Cadillac to put out a bulletin," Pope said.

"We have had one come back in the 20 or so we've sold, except for oil changes and routine maintenance," said Kelly Sarver, service manager at King Coal Chevrolet Co. in Oak Hill, W.Va.

Several service managers said most early repairs centered on fit-and-finish concerns that are typically discovered during the pre-delivery inspection.

"I'd have to say I've been pleasantly surprised. We had one come in with a cowl leak from early on in production, but we caught that in the prep process," Presswood said.

"We don't see a lot of them back in the shop. In fact, a couple of months a go I went up front to check to see how many Sevilles and Eldorados we had sold because we weren't seeing them back here and I was afraid they weren't selling well," he added.

"About the only problem we've seen coming from the factory is loose rear bumpers on some Sevilles, but we're taking care of that," Pope said.

"The fit-and-finish concerns are real common with a new model," said Phil Lynch, service manager at Capital Cadillac in Smyrna, Ga. "It seems the factory needs three to four months to learn all the changes for building them.

"But the owners love the car, and fit-and-finish is a bit of a subjective area. What one person thinks is a flaw doesn't bother another," Lynch said. "The new cars have made life a lot easier than, say, the ones Cadillac was building in the mid-'80s, when the quality was not up to the standards that we wanted it to be."

Keith McCallister, service manager at Superior Cadillac-Oldsmobile in Huntington, W.Va., said he hasn't seen any of the problems in the service bulletins.

"Just this week, we've had one come in with a high-pitched whine you hear only from certain parts of the car," he said. "It sounds like a vacuum leak, and the customer is bringing it back next week. We think we can get it solved.

"Usually when you have such a big change with a car line, you have problems with body fit and noise," McCallister said. "But they've really done their homework with this car."

CADILLAC

Nagging faults for Seville, Eldorado

continued from PAGE 1

said. "If you look at these items, they are the kind of things we might not have informed people about in the past. Now, we think these are the things that separate you from being good and being world class."

It could not be determined how many of the 1992 Sevilles and Eldorados may be affected. Only a few of the bulletins provided vehicle identification numbers for cars that may be involved.

O'Neill said he didn't know the actual number of cars with problems, but he said relatively few have gotten into customers' hands. Many of the early production models that had problems were kept in internally controlled fleets, and other cars with problems were caught and corrected before they were shipped, O'Neill said.

Cadillac claims most of the problems were discovered early in production, and fixes were prescribed. Service bulletins inform dealership service technicians how to correct the conditions on cars that have been delivered.

One bulletin on door rattles covers only Eldorados and indicates that only the first 4,152 built could experience a problem. Another bulletin covers excessive brake pedal travel needed to activate brake lights or disengage the cruise control. It indicates that the first 1,454 Eldorados and the first 3,333 Sevilles might be affected. And a bulletin on window fogging indicates that the first 12,027 Sevilles and the first 9,101 Eldorados may experience the condition.

The corrections are being made in the assembly plant so that cars are not delivered with the problems that have been identified, O'Neill said.

"I wouldn't say all of the problems are corrected, but the causes have been identified and the fixes are under way," O'Neill said. "I do not believe any of those are going out of the plant at this time."

Service managers contacted by *Automotive News* report few problems or complaints with the new Sevilles and Eldorados.

The fixes are adding to the time it takes to manufacture cars at the Hamtramck plant, and that makes the plant less efficient, O'Neill acknowledged. "It's certainly not the way you want to do it," he said. Some of the corrections require design changes that cannot be implemented until verified, approved and funded. Until then, workers will continue to make the interim fixes prescribed for the problems.

"This simply means that as we have accelerated and improved, we found conditions that could be found on the cars," O'Neill said. "Are we concerned? Yes. Are we improving? Yes."

O'Neill said the performance of Sevilles and Eldorados in internal customer satisfaction surveys is evidence that the problems haven't been widely experienced.

"The numbers are coming in higher than any other we've had at Cadillac, equal to Lexus and Infiniti," O'Neill said.

He said Seville buyers indicate they are 96 percent satisfied with their cars, and Eldorado buyers are 95 percent satisfied. That compares with a 96 percent approval rating for Lexus and 95 percent for Infiniti, O'Neill said.

It's also a big improvement for Cadillac since the early 1980s, when its Customer Satisfaction Index numbers were running in the low 80 percent range, O'Neill said.

The Seville and Eldorado have proven to be hits for the division. Cadillac sold 17,289 of the 1992 Sevilles and 11,224 of the 1992 Eldorados through April 20. That compared with 16,587 Sevilles and 10,440 Eldorados during the 1991 model year through April 20.

About 56,000 firm dealer orders have been received for the two cars, and another 10,000 to 15,000 orders are anticipated, Cadillac said. Orders are running at three Eldorados for every four Sevilles.

That would exceed Cadillac's goal of selling 60,000 Sevilles and Eldorados in the 1992 model year.

IRS

Deal is in works on tax dilemma

continued from PAGE 1

said Robertson. "It will have a positive affect on a dealer's cash flow."

Strauss viewed talks with the IRS so far as a potential answer to a vexing industry problem: "We appreciate the willingness of the Treasury Department to continue their dialogue with us in an effort to rectify what we view as a very unfair application of a portion of the IRS code." He said the IRS recognizes that this is an unusual issue and has expressed a willingness to resolve it.

Both Robertson and Strauss said this is an example of industry and government working together to solve a potentially crippling industry problem.

For years dealers matched income and expenses on extended service contracts in the same tax period. But an IRS advisory two years ago said dealers should take the income in the year the contract is sold and then pro-rate the expense over the life of the contract.

Ford Motor Co. inadvertently triggered the issue with the IRS by changing its extended service contract program in 1985, making Ford and Lincoln-Mercury dealers the principals under their programs rather than the factory.

But extended service contracts sold by independent administrators and some foreign manufacturers also name dealers as the obligors on the contracts. And most extended service contracts sold by independents and domestic and foreign manufacturers on used cars name dealers as obligors.

The result is that dealers selling those kinds of extended service contracts also were caught in the net. Worse yet, the IRS told dealers the advisory was retroactive. Hundreds of dealers have been audited and assessed hundreds of thousands of dollars in back taxes and interest. Others are waiting for notification of an audit.

But the IRS has not applied the advisory uniformly. For example, more dealers in Oregon and Washington have been audited than dealers in Ohio or Illinois.

For extended service contract administrators, the stakes are even higher. They claim the change in how dealers account for costs and income creates a monopoly for the factory programs. Most factory programs are structured so the dealer is the agent, so the advisory doesn't apply.

Independent administrators can't change their programs to make the dealer the agent. It's contrary to most state laws regarding the sale of independently administered extended service contracts.

CAFE

Ford model changes end in 1.4 mpg gain

continued from PAGE 3

model year for those full-sized cars meant that they were less of a drag on Ford's domestic CAFE than usual.

Ford lowered the domestic content on the 1992 Crown Victoria/Grand Marquis to less than 75 percent. With the cars now in Ford's import fleet, Ford's import fleet average will fall when the 1992 figures are tallied.

Kulp said that while automakers continue their efforts to improve fuel economy, new safety and emissions standards — both of which add weight to cars — may work against improved fuel economy beginning with the 1996 model year. He noted that the continued move of consumers toward bigger, more powerful cars with more options also works counter to improved fuel economy.

But the NHTSA report suggests that the market trend shifted slightly during 1991. The market share of minicompact and subcompact cars grew 3.6 percentage points, while the proportion of large, mid-sized and compact cars declined 3.7 percentage points during the 1991 model year, NHTSA said.

The report did not speculate on what role the slumping economy might have played in those shifts.

Overall, curb weight was up 11 pounds per vehicle for domestics and 35 pounds per vehicle for imports. Performance, as measured by horsepower per 100 pounds of vehicle weight, was down slightly for domestic cars and up slightly for imports, NHTSA reported.

Companies that do not meet the CAFE standards are subject to fines. But the amount of fines can't usually be determined by a single year's performance because automakers are allowed to carry forward credits from other years and use credits retroactively.

VOLVO (1992 models; expires May 31)	
240-GL, 940-GL	$1,000

Wiper inventor tackles Chrysler alone

The Associated Press

DETROIT — Robert Kearns resumed his crusade against automakers for infringing on his invention of intermittent windshield wipers, acting as his own attorney in a Detroit federal courtroom last week.

Kearns has won his lawsuit against Chrysler Corp., but he says he can't afford the hundreds of thousands of dollars his attorneys charged him. So the 65-year-old former professor fired them.

Last week, he sought damages of at least $33 million from Chrysler for infringement of his patent on the intermittent wipers used in millions of vehicles.

Kearns won his lawsuit against Chrysler after a $10.2 million settlement from a case against Ford Motor Co. The next phase of the Chrysler trial — to determine damages — began last Monday.

"In the first half of the Chrysler trial, our attorneys billed us $1.8 million for six months' work," Kearns' son Dennis said.

Kearns argues that auto companies have made hundreds of millions of dollars from the intermittent wipers.

He hopes to convince jurors that Chrysler's infringement was intentional, Dennis Kearns said.

Before U.S. District Judge Avern Cohn, Chrysler attorney Deanne Siemer told jurors that intermittent wipers didn't make cars more attractive to consumers and didn't add any significant value. She held a thick stack of documents to indicate that Kearns is one of a host of people who have worked on intermittent wipers.

"Dr. Kearns' patents are in this collection," she said.

"So are the patents of 194 other inventors of intermittent windshield wiper systems or things that are close to intermittent wiper systems."

Cases against General Motors and other defendants are pending. AN

Toyota distributor puts rebate on Camry

ARLENA SAWYERS
Staff Reporter

incentive
WATCH

Toyota's crown jewel, the 1992 Camry, is carrying its first incentive. It is a regional rebate in the area served by an independent distributor.

On April 3, **Gulf States Toyota Inc.,** distributor in Texas, Louisiana, Arkansas, Oklahoma and Mississippi, began paying dealers a $500 incentive on Camry DX four-cylinder and V-6 models.

The program expires June 2, dealers say.

Gulf States Toyota is headquartered in Houston.

A dealer who did not want to be named said he was "shocked" by the incentive since the Camry is selling so well. He said he believes that the dealer cash is the distributor's way of saying "thanks" to dealers for a job well done.

Four General Motors divisions announced revisions to their consumer incentive programs last week.

In lieu of rebates, customers may choose finance rates of 2.9 to 6.9 percent.

Unless otherwise noted, customer rebates expire today on 1991 GM models and June 4 on 1992 models.

Chevrolet raised the rebate on the 1991 and 1992 Geo Prizm from $750 to $1,000 and on the 1991 and 1992 S/T Blazer from $1,000 to $1,500. Also, incentives on 1992 Geos and the 1991 Geo Storm have been extended through Sept. 23. Alternate financing of 6.9 percent for contracts up to 48 months applies.

Consumer rebates of $1,000 on the 1992 Roadmaster sedan and wagon have been added to **Buick's** program. The rebate on option packages for the 1992 Skylark and 1992 Regal has been increased $250 and now ranges from $500 to $1,250. On the 1992 Skylark only, the alternate finance rate is 3.9 percent for contracts up to 48 months.

GMC Truck announced adjustments to its consumer program that put the rebate range on 1991 and 1992 trucks at $400 to $1,500.

Pontiac is offering a finance rate of 4.8 percent for 48 months on the 1992 Bonneville and 2.9 percent for 48 months on the 1992 Sunbird.

Ending today are **Mazda Motor of America Inc.** customer incentives ranging from $1,400 to $1,750 on 1991 and 1992 cars and $600 to $1,500 on 1991 and 1992 trucks.

Expiring last week were incentive programs for **Mitsubishi Motor Sales of America Inc.** and **Acura Division.** AN

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.	
Expires June 30. Finance rates in lieu of rebates are 0 to 9.9 percent.	
1991-92 models	
Chrysler Imperial, New Yorker Fifth Avenue	$1,500

Hoglund, Losh join GMAC board

CHARLES E. RAMIREZ
Special Correspondent

As part of General Motors' restructuring, William Hoglund, executive vice president and chief financial officer, and Michael Losh, vice president of North American vehicle sales and marketing, have been elected to the board of General Motors Acceptance Corp.

Hoglund and Losh also have been elected to the board of GM's Motors Insurance Corp. subsidiary.

The additions were announced by Robert O'Connell, GM senior vice president and GMAC chairman-elect. Hoglund succeeded O'Connell as GM chief financial officer in last month's shakeup led by GM's outside directors.

GMAC spokeswoman Lynda Kosinski denied the move was prompted by the McNamara affair. Long Island dealer John McNamara is charged with defrauding GMAC of $436 million in loans for non-existent autos. Kosinski said the move is not an attempt by GM to keep a closer watch on GMAC or auto dealers.

GMAC's directors elected Hoglund because "the chief financial officer has always been on the board," she said. "They felt it is a beneficial tradition to continue."

Losh was elected because his expertise, his long-time relationship with GMAC and his new position made it desirable to have him on the board, Kosinski said.

Calif. survey finds support for electrics

LOS ANGELES — More than half of 1,000 California voters contacted in a survey support state regulations that will require about 40,000 zero-emissions vehicles to be sold in the 1998 model year.

In addition, about half of those opposing the law said they would change their minds if tax breaks are granted to electric vehicles.

The survey, conducted in January, was paid for by Southern California Edison, an electric utility. The utility said the public is willing to pay slightly more for electric vehicles.

3 million: 12 days before '91

ANNE E. WRIGHT
Chief Statistician

U.S. car and truck manufacturers assembled their 3-millionth vehicle of the year last Thursday, 12 days ahead of 1991.

So far this year, U.S. automakers have produced 3,191,912 cars and trucks, 11.3 percent ahead of the 2,868,526 built in the same period one year ago.

U.S. car production was estimated at 129,743 last week, up 21.9 percent from the prior week and up 12.2 percent from the year-ago week.

So far this year, U.S. makers have assembled 1,875,326 cars, up 2.7 percent from the same period in 1991.

Last week, car production in Canada was estimated at 23,537, up 9.5 percent from the prior week and down 13.5 percent from the year-ago week.

Canadian car producers have assembled 343,294 so far this year, down 3.3 percent from the same period one year ago.

Last week's U.S. truck production was estimated at 87,392, an increase of 13.0 percent from the prior week. The total was 9.6 percent above the same week last year.

Year-to-date U.S. truckmakers have assembled 1,316,586 vehicles, an increase of 26.3 percent over the year-ago period.

Canadian truckmakers' estimated production last week was 20,327, up 9.1 percent from the prior week and down 0.9 from the year-ago week.

Year-to-date, truck production in Canada is 377,438, up 39.1 percent from 1991.

The estimated daily build rate of cars and trucks in the United States and Canada was 52,200.

That was an increase of 16.6 percent over the prior week and 7.4 percent over the same week one year-ago.

Chrysler Corp.'s St. Louis truck plant worked two nine-hour shifts last Saturday and is scheduled for three seven-hour shifts each day next week.

The company's Jefferson North (Detroit) facility was scheduled for one eight-hour shift last Saturday and one nine-hour shift each day this week. The plant produces the new Jeep Grand Cherokee.

Last Saturday, General Motors scheduled overtime at the following plants:

Oklahoma City; Van Nuys, Calif.; Oshawa, Ontario; and Scarborough, Ontario. The Suburban line at the Janesville, Wis., facility ran one shift of overtime last Friday.

Ford Motor Co. scheduled daily overtime last week at the Atlanta and Chicago car plants

Three truck plants also worked daily overtime: Twin Cities (St. Paul, Minn.); Edison, N.J.; and Louisville, Ky.

Both the car and truck lines at Ford's Kansas City, Mo., plant ran daily overtime last week. The truck line also worked one shift of overtime on Saturday.

Chevy to limit ZR-1 output

WARREN, Mich. — Chevrolet plans to build only 350 ZR-1 Corvettes per year in an effort to boost the exclusivity of the $64,318 car.

When the option debuted for the 1990 model year, Chevrolet hoped to sell 3,000 a year. The new limit runs until the 1995 model year, a dealer document says.

Chevrolet spokesman Dave Hudgens said he would not confirm or deny the plan.

Olds goal: young and stylish

GM to sharpen divisional images

PHIL FRAME
Staff Reporter

The foundering Oldsmobile Division will get the biggest makeover, moving to younger and more style-conscious buyers, as General Motors' new regime tries to focus the image of its car marketing divisions.

Marketing divisions would sacrifice models that blur their images and compete too closely with other GM vehicles, according to strategies for the mid-to-late 1990s under consideration by GM's North American Operations planners. While all product decisions are not final, conversations with many sources at the new North American Operations reveal general agreement on the focus each division will seek.

The plans under consideration include dropping Oldsmobile Cutlass Ciera and Bravada; Buick Roadmaster; Pontiac LeMans and the four-door Pontiac Grand Prix; and the 1997-model year remake of the Chevrolet Caprice, said sources at GM's new North American Operations.

GM execs taking retirement > 4

Other product changes being considered:

- Replacing the Cadillac Allante with a domestic car.
- Dropping the Oldsmobile Ninety Eight.
- Dropping the Buick Skylark.

Spurred by angry investors and outside board members impatient with GM's $6.5 billion in losses over the past two years, planners are considering previously unthinkable options, NAO sources said. The sources also say the Buick Regal may be in jeopardy, but a division executive, who asked not to be named, strongly denied any plans to kill the model.

"It's totally untrue," the official said. "I don't know where that got started." He also said there is no plan now to eliminate the Skylark or Roadmaster.

"There's a danger in cutting too much — you can lose market share and volume forever," he said. "I'm not saying we won't have additions and deletions, though."

Among the five passenger-car marketing divisions plus Saturn Corp., Oldsmobile would have to shift the most dramatically from its current position on the GM perceptual map. (See grid, top right)

GM car markets

Spots show how GM's car divisions perceive themselves in the marketplace.

MARTHA GRATTAN / AUTOMOTIVE NEWS

OLDSMOBILE

Outsiders commonly suggest eliminating the Oldsmobile division entirely. But GM executives steadfastly argue that they shouldn't discard a dedicated dealer body of 3,000 and decades of built-up brand equity.

Currently regarded internally as more conservative and nearly as pricey as Buick, Oldsmobile will

GM slashes jobs; is it still good for America?

PETER BROWN
Editor

The people of Ypsilanti, Mich., and North Tarrytown, N.Y., can only stand and watch as General Motors prepares to eliminate thousands of jobs by closing assembly plants in their communities.

They are among the big losers as GM slashes itself into competitive shape in pursuit of profits. By 1995, the automaker plans to close 21 plants and cut 80,000 North American jobs.

Even those cuts weren't enough for the board of directors, which installed a new management team last month to speed up the slimming down. The team of Robert Stempel and Lloyd Reuss, which was slow to shed people, was broken up and Reuss was demoted.

> “For years I thought what was good for our country was good for General Motors — and vice versa.”
>
> **CHARLES E. WILSON**
> FORMER GM PRESIDENT

GM's radical surgery raises a question that first arose in one of the most famous quotations about American business: former GM President Charles E. Wilson's 1953 statement to Congress that "what was good for our country was good for General Motors — and vice versa."

Have the interests of GM and the nation diverged? Is what's good for General Motors in 1992 — plant closings, elimination of jobs — still good for the country?

The answer, according to many people both inside and outside the industry, remains a firm "yes." GM has to remain competitive if it is to contribute to the country.

But GM's strategy creates losers who disproportionately bear the burden of a changing world economy.

"The tragedy in human and social terms is when we say it's OK to let that cost be borne

Ford strategy: Add options, cut prices

KATHY JACKSON
Staff Reporter

The two-door version of the Mercury Topaz almost got a mercy killing before the 1992 model year.

It was rescued by a test: Lincoln-Mercury Division added $1,700 worth of options and sold it for less than the previous base price. Sales soared.

Value pricing is one of Ford Motor Co.'s strategies for pumping up market share this decade.

It also may be a first step toward reducing or eliminating costly customer rebates. Ford is trying to simplify the buying experience and eliminate the distrust that typifies retail car sales.

In the United States, Ford is testing various everyday-low-pricing concepts on the Mercury Topaz, Tracer and Cougar and the Ford Escort and Thunderbird. All of those programs may go national by fall.

When the Escort and Tracer programs go national May 21, the current $500 customer rebate on the Escort will be reduced.

Securities analyst Wendy Beale Needham says Ford officials told analysts in March that the reduced rebate will allow the company to increase the profit per vehicle by $300.

Ford dealers around the country are anxious for the national rollout of the one-price Escort later

Picking up after the riots

Los Angeles' auto community struggled to rebound last week. Asian importers helped with relief efforts. Some dealerships suffered damage; most dealt with empty showrooms. As one employee talked a mob out of torching a Ford store, a Toyota service technician died in riot-related violence. See stories on Page 3.

Dealers get a break on waste oil disposal

MAX GATES
Staff Reporter

WASHINGTON — Auto dealers who handle used motor oil in their service departments received a break last week from the EPA, which decided not to tighten rules for disposal of waste oil.

In deciding not to classify used oil as a hazardous waste, EPA in effect maintains the current system for facilities that collect used oil, including dealerships.

EPA Administrator William Reilly said waste oil is already regulated under other laws.

"Because used oil that will be disposed of is already subject to regulation, we see no need for duplication," Reilly said.

If used oil had been reclassified, a dealer would have had to hire a special transport service to haul it away. Dealers feared that disposal costs would increase. Current rules govern how a dealer stores oil and require each dealer to keep records on what is handled.

Also last week, the EPA decided not to regulate used oil filters as a hazardous waste, as long as all

Honda 'mini-minivan' spied

The apparent prototype of a new Honda/Rover supermini van was spied recently being rolled out of a hangar in England. The five-passenger mini is believed to be based on the next Honda City minicar, which will share a platform with the Rover Metro. European versions likely will be sold with a 1.5-liter, four-cylinder engine. Japanese buyers will get the usual 660cc.

virtually no price increase from comparably equipped 1992 models.

The base model will rise $588 to $12,845, a 4.8 percent hike and the cost of the GT will increase $317 to $15,174, up 2.1 percent. Most of the increase is to account for the addition of a standard driver-side airbag and an upgraded powertrain, Ford said.

On a comparable equipment basis, prices of the 1993 models are up an average 0.6 percent or $108; optional equipment prices are unchanged.

Ford Division deleted the LX model for 1993.

Saab cuts loss in first quarter

Saab Automobile AB said late last week that it lost $49.4 million in the first quarter, compared to a loss of $160.7 million a year earlier.

Saab attributed the improved performance to a huge restructuring program underway for two years.

First-quarter sales rose 16 percent from a year earlier, to $658 million, Saab said.

Peterbilt strike enters 3rd week

MADISON, Tenn. — Some 390 UAW members continued to strike Paccar Inc.'s Peterbilt Motors Co. Class 8 truck plant after walking out April 27 in a dispute over a new three-year agreement.

The dispute centers on a proposal to increase workers' contribution to health costs.

Jack McRae, Paccar spokesman, said no talks are scheduled. Peterbilt increased production at its non-unionized plant in Denton, Texas, to offset production losses and also is using salaried employees to produce two to three trucks daily in Madison, McRae said.

Ford to repair exhaust systems

DEARBORN, Mich. — Ford Motor Co. is recalling about 306,000 1987 model Ford Taurus and Mercury Sable cars with 3.0-liter V-6 engines to replace the catalyst assembly.

Ford said it is taking the action to make sure the vehicles meet acceptable exhaust emissions levels. Vehicles built for sale in California and Canada are not included.

Ford is recalling about 20,300 1988 Ranger pickups built for sale in California to modify the exhaust system catalyst.

The trucks are equipped with the 2.3-liter four-cylinder engine and manual transmission. Ford said the vehicles may exceed state exhaust emissions standards.

DeLorean faces arrest warrant

BELFAST, Northern Ireland — The Royal Ulster Constabulary last week issued an arrest warrant for one-time automaker John DeLorean, charging him with defrauding the British government in the course of his failed sports car project.

The warrant means DeLorean will be arrested if he ever visits British territory.

A week earlier Frederick Bushell, former Group Lotus chief executive, pleaded guilty to conspiring with DeLorean and others to defraud the British government-backed sports car project of $17.65 million.

DeLorean was acquitted of similar charges in the United States in December 1986.

Mack Canada restructured

ALLENTOWN, Pa. — Mack Trucks Inc. restructured its Canadian subsidiary, Mack Canada Inc., to align its operations more closely with those in the United States.

Canada managers will report directly to a newly formed Executive Management Canadian Advisory Committee of senior executives at Mack Trucks. Guy Claveau, executive vice president and chief financial officer of Mack, is the chair.

Gordon Hellowell was named to the new position of vice president of sales and marketing for Mack Canada.

Farren leaves trade for Bush

WASHINGTON — J. Michael Farren, who has headed U.S. negotiations with Japan on autos and auto parts, will leave the Commerce Department June 1 to be deputy manager of President Bush's re-election campaign.

His successor has not been named.

Farren served in a variety of Commerce Department posts during the Reagan administration before becoming deputy director of Bush's transition team to the White House in 1988 and his current job in 1989.

Lutz to Japan: Hire minorities

ATLANTA — Chrysler Corp. President Robert Lutz says Japanese automakers should provide more opportunities for minorities.

Speaking at a dinner sponsored by *Black Enterprise Magazine* here, Lutz pointed out that 23.8 percent of Chrysler's employees are minorities and that 18 of the top 100 black businesses listed by the magazine are Chrysler dealerships. "I'd like to challenge the Japanese to do the same thing," he said.

Lutz also pointed out that Chrysler has opened a $1 billion auto plant in Detroit and has committed more than $100 million to minority dealer development.

Ford unites r&d in Europe

LONDON — Ford Motor Co. announced last week that it will consolidate European research and development work at two centers in Germany and Britain. About 2,500 employees in the two countries are involved; no jobs will be lost, Ford said.

Under the two-year reorganization, staff will be transferred from sites in Germany and England to Ford's r&d facilities at Merkinich, Germany, and Dunton, England.

— Maurice Glover

briefly

Ford won't try the hose test

Mimi Vandermolen, a **Ford Motor Co.** design executive, said she had her male colleagues don fake fingernails so they can experience how tough it is to open a car door with long nails. "They really should try getting in and out of a car with pantyhose and a tight skirt, but I didn't want to push it," said Vandermolen, one of the highest-ranking women in the auto design community.

IT'S A CROSS-COUNTRY CLUB — Country clubs for 4x4 vehicle owners. That's what The Searchers, a company in Cortez, Colo., plans to establish soon. Searchers is purchasing its first retreat on the La Sal mountains in Moab, Utah, says company founder Dale Lemmon, and it is looking at other sites across the country. Lemmon says the idea is to establish museums, campsites, cabins, driving courses and restaurants so drivers can enjoy their sport in style. "Much of the premium land is being purchased by foreign countries, and four-wheel-drive trails are being closed on public lands," Lemmon says in the catalog *The Searchers World*. The Moab retreat is slated to open next April.

SLEEPING WITH THE ENEMY — The world is waiting to see what **General Motors** might learn from John Smale, the new chairman of its executive committee. Smale is credited with leading a revolution at Procter & Gamble Co. that put the consumer-goods giant squarely into black ink in the 1980s. Where did Procter & Gamble learn its lessons? A 1990 corporate brochure gives credit to a short list of "well regarded" corporations that P&G looked to for answers. No. 1 on the list: **Ford Motor Co.**

MORE GREEN STUFF — Owner and service manuals for the new **Nissan** Quest minivan and Altima compact sedan will be printed on recycled paper with recyclable ink. The recycled paper includes at least 10 percent "post-consumer" waste paper, some tiny fraction of which might even be old Stanza service manuals.

OLD USE OF NEW — Back when **Chrysler Corp.** was *really* in trouble, it called itself "the New Chrysler Corp." Now **Mazda Motor of America Inc.** is billing itself, in ads and press events, as "the New Mazda." As it happens, Mazda Executive Vice President Clark Vitulli was also at Chrysler when it became "new." But Vitulli says he argued against using "new" at Mazda. When Chrysler used it, he says, the adjective was aimed at keeping the press from always referring to "the beleaguered" or "the financially troubled" Chrysler. Mazda is neither. So why the new name? Vitulli says Mazda folks just liked it because of all the new Mazda cars. It just feels right?

WAY WITH WORDS — Donald Runkle, **GM** vice president of advanced engineering, uttered the expression, "gleam to gleam," at the Society of Plastics Engineers annual technical conference in Detroit last week. The expression is used in connection with the time consumed in bringing a new vehicle to production, Runkle said. It covers the period "from the gleam in the eye to the gleam in the showroom."

Stunned L.A. dealers start cleanup

Toyota technician killed by rioters

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Auto dealers in greater Los Angeles are still reeling from the civil unrest that gripped the city after a jury acquitted four police officers in the beating of motorist Rodney King.

For one, Long Beach Toyota, it means mourning a service technician who was shot dead by rioters. For others, recovery means repairing broken windows or replacing damaged vehicles. But for most, getting back to normal will mean trying to recover from five days or more of dismal sales when stores were closed or traffic disappeared.

"We haven't had any problems, but we haven't had any customers either," said Reiner Kolodinski, general manager at Arrow Buick-Pontiac-GMC Truck in Compton, Calif. He said his dealership didn't sell a single vehicle during the weekend after the riots began. It usually sells four.

Majestic
PONTIAC
HONDA

JAVIER MENDOZA

Majestic Pontiac-Honda on Crenshaw Boulevard suffered minor damage during riots that racked Los Angeles.

But for those dealers close to the violence, the wounds cut far deeper than lost sales. And the recovery may never come.

Matt Haines, 32, a technician at Long Beach Toyota, was one of 57 persons killed in the disturbance.

Service Manager Tom Johnson said that he closed early on Thursday as the violence spread south toward Long Beach, "but Matt stayed until 5:30 p.m. when his work was done. That's the kind of guy he was."

Haines was shot later that evening while riding his motorcycle to a friend's home to help with a car that wouldn't start.

Long Beach Toyota paid for Haines' funeral, and Toyota Motor Sales U.S.A. Inc. made a donation

Asian makers rush to aid rebuilding

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Asian automakers are helping to rebuild Los Angeles from the racial violence following the Rodney King verdict.

Hyundai Motor America and almost every Japanese importer have announced plans to give money and volunteer assistance to victims of the social unrest that tore the city apart April 29 through May 1.

Every Asian automaker has its U.S. headquarters in Southern California except for Subaru of America Inc., which is in Cherry Hill, N.J. Asian importers also sell a lot of their vehicles here.

"This is our community, where we work and where we live," said Don Spetner, manager of the office of corporate communications at Nissan Motor Corp. in U.S.A. Inc., based in Gardena, Calif., just south of Los Angeles. "We have no choice but to get involved."

By late last week, representatives from the Big 3 and several European makers said they had not decided whether to offer assistance.

One exception was Mercedes-Benz of North America Inc. Its Western Region donated a total of $12,000 to six local relief organizations.

"We're in this community and it's a very important market for us. So we had to get involved," said Denise Norman, Western Region spokeswoman at Mercedes-Benz. She said the Mercedes regional office gives $70,000 annually to local charities.

"We believe that the business community must make a long-term commitment to supporting programs that can enact some change," she added. Mercedes' Western Region office is in Hollywood, near an area hit by looting and violence.

Dealership porter saves Ford store from rioters' torch

LINDSAY CHAPPELL
Staff Reporter

If Lennox Barrow hadn't faced down rioters shortly after the Rodney King verdict, he wouldn't have a place to work today.

"If I hadn't done something to stop them, everybody here would be out of a job," said the night porter for Crenshaw Motors in south central Los Angeles.

Barrow, 34, was on duty at the Ford dealership when flames engulfed a Firestone tire store across Crenshaw Boulevard. About 10 people carrying what looked like Molotov cocktails then came running toward Crenshaw Motors. It was clear that the 54-year-old store with about 100 cars on the lot was their next target.

But Barrow stopped them.

"I asked them why they wanted to do this," he said in a telephone interview. "I told them that this was my livelihood and that I had a family to support." Barrow has three young children.

Two of the group broke off and began throwing gasoline around the dealership's service area.

"I told them they were wrong to burn it down, that more than 100 people worked here, and that it was good for people in the community," Barrow recalled. "I told them I needed this job for my family, and everybody else working here needed their jobs, too."

The vandals appeared to be in their early to late 20s. Despite the chaos on the streets, they heeded Barrow's pleas.

"One of them said, 'Let's let this one slide.' And they were gone," Barrow said. "Maybe they heard what I was saying about my family. I think that if they'd been any younger, they wouldn't have listened to what I was saying."

Barrow cleaned up the gas and stayed through the night in the blacked out area. He and a neighboring homeowner lit the property with the high beams from two trucks.

"We're here today because of him," said Jim Mancell, Crenshaw sales manager. "It took an awful lot of nerve." AN

April cars still bleak but trucks rise 16.7%

JIM HENRY
Staff Reporter

The sun shone brightly on the Big 3-dominated light-truck segment in April, once again fueling hopes that an automotive recovery has begun.

While car sales in the United States climbed only 3.7 percent over 1991's depressed total, truck sales jumped 16.7 percent.

That put the seasonally adjusted annual selling rate for light trucks at 4.75 million — a peak for this year.

Analysts generally consider stronger truck sales as an encouraging sign for the industry. Trucks tend to slip first when a downturn begins and then lead a recovery.

Light trucks are the Big 3's "anchor to windward," said Joseph Phillippi, auto industry analyst for Shearson Lehman Brothers Inc. in New York.

And there were plenty of big gainers in the Big 3 fleets. Ford's Explorer was up 22.9 percent, its Aerostar rose 31.3 percent and the new Club Wagon advanced 74 percent over last year. General Motors' plastic-bodied minivans all had double-digit gains, led by a 77.2 percent increase for the Pontiac Trans Sport.

Overall, Ford's truck sales were up 20.3 percent, and GM's advanced 11.7 percent.

Chrysler Corp., meanwhile, had a record April for truck sales, aided by its National Minivan Sale

SALES

Trucks climb 16% in April bonanza

continued from PAGE 3

promotion in the last week of the month.

Chrysler's truck sales, led by minivans, were up 38.3 percent, to 95,053, in April.

Thomas Pappert, vice president of sales, said Chrysler's minivan sales zoomed 47 percent above the year-ago month.

That gave Chrysler its second-best month ever for minivans and the highest four-month minivan total ever.

Jeep sales jumped 43.2 percent for the month and 49.4 percent for four months. Jeep is offering $2,250 in dealer and customer incentives on Jeep Cherokees through June 30. Cherokee sales increased 10.9 percent in April, and Chrysler sold 4,877 new Jeep Grand Cherokees.

April's gains moved total truck sales in the United States 11.7 percent ahead of 1991 for the first four months of the year, while car sales advanced a bare 1.9 percent.

The sluggish car sales could prompt makers to cut production, Phillippi said. As has been widely reported, automakers have cut back sales to daily rental fleets. But the companies reduced fleet sales on the assumption that the "real" retail market would come back faster than it has, he said.

Overall car and truck sales in April rose 8.0 percent above a disappointing year-ago month. Combined Big 3 sales were up 11.8 percent, and market share climbed 2.5 percentage points. Japanese-badged vehicles rose 1 percent in volume, but market share slipped 1.6 percentage points.

Sales for American Honda Motor Co. Inc. slid 9.4 percent in April. Nissan Motor Corp. in U.S.A. was off 2 percent, but Toyota Motor Sales U.S.A. Inc. was up 9.1 percent. Honda is the only one of the three Japanese leaders that does not sell trucks.

On the luxury side at those companies, Lexus and Infiniti sales were up; Acura sales were down.

Chrysler sold 150,227 cars and trucks in April, a leap of 23.8 percent over 1991. In the year-ago month, Chrysler was off 5.8 percent.

Ford Motor Co. sold 272,379 cars and trucks, up 13.2 percent. GM sales improved 7.0 percent to 395,411 cars and trucks.

Mazda Motor America Inc. sales jumped 28.4 percent. Mazda extended a customer incentive on its Protege and certain other models that had been slated to expire April 6.

obituaries

E.R. Glanville

PORTLAND, Ore. — E.R. "Al" Glanville, part owner and general sales manager of DeLon Downtown Auto Center in Portland, died April 15. Glanville retired as sales manager in 1983, but continued working in advertising for the company. He was 75.

Beverly Wiles

ATLANTA — Beverly Wiles, a former executive secretary for the Chrysler Training Center in Centerline, Mich., and a Mopar Division employee, died April 22. She was 67. Wiles retired in 1985 after serving 37 years with Chrysler Corp.

Volvo, Sweden agree on Procordia link

JIM HENRY

Staff Reporter

AB Volvo and the Swedish government reached a compromise that stops Volvo and Procordia AB frcm merging immediately but gives Volvo the inside track for such a move in the future.

Volvo and Procordia, a food and pharmaceutical conglomerate, proposed an out-and-out merger in January. Volvo and the Swedish government are Procordia's two largest stockholders, each with 42.7 percent.

The government wants to privatize Swedish companies like Procordia, but it objected to the Volvo-Procordia merger as originally proposed. Government officials said the merger was better for Volvo than for Procordia shareholders and questioned whether the merger of two such dissimilar companies made sense.

Volvo argued that diversification was precisely the point. Volvo said it wanted to link up with Procordia because Volvo is too dependent on the cyclical auto, truck and bus business, while Procordia has a much steadier cash flow.

Under the compromise reached last week, the government will eventually sell off its entire Procordia shareholding. But first, Volvo will acquire from the government shares representing 2.3 percentage points of the voting rights in Procordia. That will bring Volvo's stake to 45 percent and cut the government's to 40.4 percent.

A spokesman for Volvo North America Corp. said that is expected to be done by this fall.

The rest of the government shares will be offered to private investors "as soon as possible," Volvo said. But Volvo will retain a controlling interest because it will have the right to refuse the sale of blocks of 5 percent or more and purchase those shares itself.

Volvo will make an offer to buy the rest of Procordia if the auto company acquires another 20 percent of Procordia's stock by exercising its right of first refusal, in addition to the original 45 percent.

While negotiations with the Swedish government were under way, Volvo officials said repeatedly they wanted a 100 percent merger, not partial ownership.

Astro tallies high score for injuries in NHTSA crash

WASHINGTON — The driver and front-seat passenger in a 1992 Chevrolet Astro minivan risk serious head injury in a 35 mph crash, according to the government's latest crash results.

The Astro's scores also show that chest injury is possible in a 35 mph crash, the standard used in the National Highway Traffic Safety Administration's New Car Assessment Program.

The Astro had head-injury scores of 2,065 for the driver and 1,815 for the front passenger. A score of 1,000 or higher indicates that serious head injury is possible. The Astro's chest-injury scores were 61 for the driver and 68 for the passenger. A score of 60 or above indicates chest injury is possible.

Head injury was "unlikely" for the three other 1992 vehicles in NHTSA's latest crashes. They are: Toyota Camry (driver 390; passenger 650), Isuzu pickup (884/831), and Nissan Maxima (818/864).

All 1990 cars	$500-1,500

VOLVO (1992 models; expires May 31)

240-GL, 940-GL	$1,000

USED OIL

EPA won't change rules for disposal

continued from PAGE 1

free-flowing oil has been removed from the filters prior to their disposal.

"We're pleased. It's what we supported," said Douglas Greenhaus, senior attorney for the National Automobile Dealers Association.

But President Bush's moratorium on new regulations, recently extended for four months, has held up another EPA action that NADA supports — revised rules for managing waste oil.

Those rules are crucial for dealers because they are expected to exempt dealers from paying cleanup costs at EPA Superfund sites, Greenhaus said. A Superfund site is one that has been identified as a major toxic dump and targeted for cleanup by the EPA.

Currently, dealers who follow EPA rules can still be forced to share cleanup costs if they had shipped waste oil to a location that has been named a Superfund site. Car dealers have had to help pay to clean up more than 20 Superfund sites, most of them former and current oil re-refining centers, Greenhaus said.

He said he hopes the rules on managing used oil will be issued by the end of the summer.

"The sooner we have standards to comply with, the sooner we'll get that exemption," Greenhaus said. "The law would protect the environment and not be overly burdensome for dealers. And there is a good chance that it would forestall something much worse coming out of Congress."

The House and the Senate are considering waste oil regulations as part of Resource Conservation and Recovery Act legislation.

Last week's EPA action does not change the status of recycled used oil, which can be burned on site as a fuel. That oil must be tested for contaminants, but is otherwise exempt from hazardous-waste regulations.

Mitsubishi adds spiffs; VW pushes leases

ARLENA SAWYERS
Staff Reporter

incentive WATCH

Mitsubishi Motor Sales of America Inc. has announced a new incentive program for dealers, and Chrysler Corp. sweetened its customer rebates on some cars.

Volkswagen United States is offering a choose-your-own-terms contract to customers who lease Jettas.

Mitsubishi is paying factory-to-dealer rebates on the 1991 and 1992 Galant, Mirage and pickup, based on performance against sales quotas.

Dealers who sell or lease at least two of those units in any combination receive $1,000 on the Galant and pickup and $500 on the Mirage.

Dealers who reach at least 55 percent of their sales quota in May may choose one of the three nameplates and earn an additional $200 on that nameplate. After reaching 100 percent of the sales objective, the dealer will receive an additional $300 on the nameplate selected.

Dealers are eligible for an additional $500 to $3,000 on the Galant VR-4, based on volume during the program.

Also available are cash incentives to dealers on the 1991 and 1992 Eclipse equal to 7 percent of the base sticker price. The payments begin with the second Eclipse sold or leased.

The company is continuing its Eclipse Triple Diamond Lease offer of $500 down and $149 a month for 60 months.

Eclipses leased under Triple Diamond are not eligible for the 7 percent incentive, but they do count toward the attainment level. The Mitsubishi programs expire July 6.

Chrysler increased the customer rebates by $500 on select 1991 and 1992 vehicles delivered from May 7 to June 30. The vehicles and new rebates are: Eagle Talon all-wheel-drive and Plymouth Laser all-wheel-drive, $1,500; Chrysler LeBaron coupe and convertible, Eagle Summit four-door (excluding wagon), $1,000.

Alternate financing in lieu of the rebates is available.

Through June 30, **Volkswagen** is offering a special Value Lease deal on its 1992 Jetta GL equipped with air conditioning, automatic transmission and AM/FM radio and cassette.

Customers can choose their own down payment and monthly payment.

For example, the terms for 48-month contracts are: $950 down and $179 a month, $500 down and $189 a month and zero down and $199 a month. Other down payments and lease contracts are available.

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.

Expires June 30. Finance rates in lieu of rebates are 0 to 9.9 percent.

1991-92 models

Chrysler Imperial, New Yorker Fifth Avenue	$1,500
N.Y. Salon, LeBaron sedan	$1,000
LeBaron coupe, conv.	$500
Dodge Monaco, Daytona (1991 only)	$1,500
Shadow, Dynasty, Spirit	$1,000
Colt 3-dr. (Northeast)	$700
Daytona (1992), Colt	$500
Dodge Ramcharger	$2,000
Ram pickup (gas)	$1,500
Ram wagon (van and conversion)	$1,000
Dakota	$750
Ram 50	$500
Eagle Premier	$1,500
Talon	$1,000
Summit 3-dr., 4-dr., (Northeast)	$700
Summit	$500
Jeep Cherokee	$1,500
Comanche	$750
Wrangler	$500
Plymouth Acclaim, Sundance, Laser	$1,000
Colt 3-dr., (Northeast)	$700
Colt, Colt Vista	$500
All minivans (Calif., Hawaii)	$1,000
All minivans (elsewhere)	$500

FORD MOTOR CO.

1992 models

Expires June 30. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Some rebates vary by regions.

Ford Probe	$1,500
Thunderbird Sport, SC (Calif. only)	$1,500
Taurus SHO	$1,000
Other Taurus, Mustang	$500-1,000
Escort	$500-750
Thunderbird, Tempo, Crown Victoria, Festiva	$500
Ford Bronco, Econoline (RV)	$1,000
Ranger	$750-1,000
Aerostar	$500-1,000
F series	$400
Lincoln (all)	$1,500
Mercury Sable	$500-1,000
Capri	$750
Tracer	$500-750
Topaz, Cougar, Grand Marquis	$500

1991 models

April 1 to June 30. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Some rebates vary by regions.

Ford Thunderbird, Probe	$1,500
Mustang	$1,000-1,500
Festiva	$1,000
Escort	$750
Taurus SHO	$600-1,000
Other Taurus	$400-1,000
Tempo	$400
Ford Bronco, Econoline E150 RV	$1,000
Aerostar	$400-1,000
Ranger, F series, other Econoline	$400
Mercury Capri	$2,000
Sable, Cougar	$1,500
Tracer	$750
Topaz	$400

GENERAL MOTORS

1992 models

Expires June 4, unless otherwise indicated. In lieu of rebates, finance rates of 2.9 to 6.9 percent are offered.

Buick (based on option package ordered)	
Riviera	$2,000
Roadmaster	$1,000
Century, LeSabre	$250-1,250
Regal, Skylark	$500-1,250
Cadillac (expires June 30) DeVille, Brougham	$1,500
Chevrolet Geo Metro conv. (expires Sept. 23)	$1,000
Other Metro (expires Sept. 23)	$500
Geo Prizm (expires Sept. 23)	$1,000
Geo Storm (expires Sept. 23)	$750
Lumina	$750
Cavalier, Camaro, Corsica, Beretta, Caprice	$500
S/T Blazer	$1,500
G-Van (upfit)	$1,000
S/T pickup, Lumina APV	$750
Geo Tracker (expires Sept. 23)	$750-1,000
Other G-Van	$500
Astro	$500
C/K pickup (exclude Crew Cab)	$400
C/K pickup (extended cab)	$400
GMC S15 Jimmy (exc. Typhoon)	$1,000
Sonoma (exc. Syclone)	$750
Sierra (exclude Crew cab)	$400
Safari	$500
G-Van	$500-1,000
Oldsmobile (regional) Toronado, Silhouette, Bravada	$1,000-2,000
Custom Cruiser	$1,000-1,500
Cutlass Ciera	$1,000
Cutlass Supreme	$750-1,500
Ninety Eight, Eighty Eight	$500-1,250
Pontiac Grand Prix, Trans Sport	$750
Sunbird, Grand Am, Firebird, Bonneville	$500

1991 models

Chevrolet Geo Storm (expires Sept. 23)	$750

HYUNDAI (expires June 2)

Excel (1991)	$1,200
Excel (1992)	$500-600
Elantra (1992)	$1,000
Scoupe (1991)	$1,000-1,500
Scoupe (1992)	$750
Sonata (1991)	$2,000
Sonata (1992)	$1,500

SUBARU (expires June 2)

Loyale (1991-92, fwd sedan, awd wagon)	$500

HYUNDAI

Programs designed to aid quality image

continued from PAGE 6

and dealers share the responsibility to deliver cars in near-perfect condition.

"In a way, it says we're doing something we've asked (dealers) to do," he said. "But it's not to be perceived as a negative program. We've got to make sure those cars are delivered in proper condition.

"Dealers develop their own methods, and some dealers are more successful than others."

Whitman said Hyundai will continue the program for the "next couple of quarters" and expects to start receiving customer feedback this summer. He said the company has not decided whether to make the program nationwide.

Hyundai's new customer assistance center is a clearinghouse for consumer complaints, and its employees are trained to diffuse anger, Whitman said.

Complaints received about specific dealerships are shared with regional offices and require dealer follow-up.

Consumer problems are usually resolved in five to 10 days, and 70 percent are resolved without going to the dealer, Whitman said. The line receives 450 to 500 calls a day. Calls range from people asking where the nearest Hyundai dealership is to owners concerned about specific problems.

INFINITI

J30 may be basis for new coupe

continued from PAGE 6

An Acura NSX competitor was once considered for the Infiniti lineup, but the high-end coupe will now take precedence.

Before a coupe arrives, however, Infiniti will replace the lower-rung G20 compact sedan with a more luxurious model, Horie said. The G20 is sold elsewhere in the world as the Nissan Primera.

"The G20 was not designed solely for the U.S. market, and so we are working to replace it as early as possible," Horie said.

The front-drive Primera will be facelifted this fall and is due to be replaced in 1994, but company sources say that neither will be the basis of a new G20.

More likely, they say, the G20 successor will be based on the all-new Maxima/Cefiro that will debut in September 1993.

Of the two future products — a coupe and the new entry-level Infiniti — Horie said the G20 replacement has the highest priority. And he said the G20 successor preferably will be developed specifically for Infiniti.

Overall, Nissan's Tokyo executives are eager to boost Infiniti volume, which totaled 23,960 in 1990, the brand's first full year, and 34,890 last year.

"We're satisfied with our Customer Satisfaction Index and brand-image results, but volume-wise it's not quite living up to our expectations at the moment," said Horie.

Horie also cited Infiniti's lower dealer count as a reason for Lexus' higher sales. As of Jan. 1, Infiniti had 109 dealers to 147 for Lexus.

Horie said, "Our current plans indicate that we will have 160 dealers in 1994, and that should put us closer to Lexus than we are today."

Chrysler eyes N.Y. assets of McNamara

CHARLES M. THOMAS
Staff Reporter

Chrysler Credit Corp. is moving swiftly to capture 160 vehicles and other assets valued at $2.4 million from Station Chrysler-Plymouth Inc., owned by John M. McNamara. The New York dealer is accused of bilking General Motors Acceptance Corp. of $436 million in a phony floorplan scheme.

The petition filed in New York's State Supreme Court last week came after an audit of Station Chrysler-Plymouth by the finance company. The audit revealed that McNamara had pledged the dealership's assets as security for loans from GMAC.

Chrysler Credit says pledging the dealership's assets constitutes a technical default in its agreement with Station Chrysler-Plymouth, which is based in Port Jefferson Station, N.Y.

"As a secured party Chrysler Credit can accelerate loans for any reason, or if vehicles are in danger of loss or confiscation," said Bob Heath, a spokesman for Chrysler's finance unit.

According to the petition, Chrysler wants to recover the vehicles and other dealership assets including parts, furniture and fixtures because of federal charges against McNamara for fraud and money laundering.

The suit also alleges the dealership is losing money, its net worth is declining and likely will close within a few weeks.

Meanwhile, GMAC already has seized the assets of McNamara's other dealership, McNamara Buick-Pontiac in Port Jefferson.

McNamara, 52, who was charged April 15 in U.S. District Court in Brooklyn, was freed on $300 million bail secured by virtually everything he owns.

GMAC accused McNamara of submitting bogus paperwork to borrow money for customizing vehicles supposedly shipped to a trading company that was located in Cyprus.

But both the trading company in Cyprus and the specialty customizing company in Indiana were owned by McNamara.

The FBI charges that the purchase and resale of vehicles existed only on paper and that McNamara was just borrowing new money to repay existing debts.

GMAC's paperwork shows McNamara supposedly bought 70,000 vehicles for export in 1991. That number would have represented almost 40 percent of the motor vehicle population of Cyprus in 1990, according to sources.

U.S. AND CANADA CAR AND TRUCK PRODUCTION

17 plants run on overtime

ANNE E. WRIGHT
Chief Statistician

Seventeen U.S. and Canadian car and truck plants worked overtime last week, and no downtime was scheduled.

Seven car and 10 truck plants worked overtime in response to increased sales and low inventories.

U.S. and Canadian car and truck manufacturers assembled their four-millionth vehicle last Wednesday, 14 days ahead of 1991.

So far this year, car and truck production in the two countries is 4,181,126, an increase of 12.0 percent over the 3,733,176 produced one year ago.

Last week's estimated U.S. car production was 134,277, up 2.5 percent from the prior week and up 17.3 percent from last year.

Year-to-date, car production in the United States is 2,010,878, up 3.3 percent from the same period last year.

Canadian carmakers assembled an estimated 20,854 autos last week, down 18.4 percent from the prior week and down 23.4 percent from the year-ago week.

So far this year, car production in Canada is 366,177, down 4.2 percent from the same period one year ago.

Last week's U.S. truck production was estimated at 88,393, an increase of 2.7 percent over the prior week and 26.0 percent over the same week one year ago.

So far in 1992, truck production in the United States is 1,403,668, an increase of 26.1 percent over the same period one year ago.

Estimated truck production in Canada last week was 21,649, virtually even with the prior week and up 6.3 percent from the year-ago week.

Canadian truckmakers have assembled 400,403 trucks so far this year, 37.3 percent ahead of 1991.

Last week's estimated daily build rate of U.S.- and Canadian-built cars and trucks was 53,035, an increase of 0.3 percent over the prior week and 14.2 percent over the same week one year ago.

Last Saturday, General Motors scheduled overtime at the Wilmington, Del.; Bowling Green, Ky.; and Lordstown, Ohio, car plants. The following truck plants also worked Saturday overtime: Janesville, Wis.; Moraine, Ohio; Oshawa, Ontario; and Scarborough, Ontario.

Ford Motor Co. scheduled daily overtime last week at the Atlanta; Chicago; Kansas City, Mo.; and St. Thomas, Ontario, car plants.

Five trucks plants worked daily overtime last week: Kansas City, Mo.; Twin Cities (St. Paul, Minn.); Edison, N.J.; Louisville, Ky.; and St. Louis.

Chrysler Corp.'s St. Louis truck plant worked two nine-hour shifts last Saturday and is scheduled for three seven-hour shifts each day this week.

late news

Honda regions get more power

TOKYO — Honda Motor Co. will announce major organizational changes Wednesday that will give more authority to regional managers, company insiders said late last week.

The restructuring will further decentralize worldwide passenger-car operations by setting up regional headquarters in the United States, Japan, Europe and Asia, a Honda official said.

Organizational changes to be announced by Honda President Nobuhiko Kawamoto reflect an ongoing reshaping of the corporation that began just over a year ago. But personnel changes at the top come in the wake of the unexpected resignation of Executive Vice President Shoichiro Irimajiri in March for health reasons.

Wednesday's announcements will coincide with Honda's annual financial press conference. The changes will be confirmed a month later at the company's annual stockholders meeting.

Last year, Honda divided the company into three units — auto, motorcycle and power products — and did away with its consensus-style structure in favor of clear lines of authority.

GM consolidates fleet sales

Elimination of overlap expected to save millions

JOSEPH BOHN and PHIL FRAME
Staff Reporters

General Motors is taking over car and light-truck fleet sales duties from its six divisions.

Because only one person will call on an Avis or a Xerox, not six, GM will eliminate nearly half its fleet sales jobs. Those persons will be reassigned.

The new Fleet Operations super group is an effort to focus marketing efforts, eliminate overlapping bureaucracy and save the automaker millions of dollars in personnel and marketing costs.

The group, under North American Operations, will handle medium and large customers of six car and truck divisions, according to GM sources. Saturn is not included.

One fleet sales representative will call on a major rent-a-car company or corporate account, rather than as many as six. Only one service representative will call on the account.

The result is about 40 fleet people in the field

Iacocca begins the goodbyes

His voice weighted with emotion, Chrysler Chairman Lee Iacocca started bidding farewell to the company that has become synonymous with his name. Last week he chaired his final stockholders meeting. Alongside him are Chrysler President Robert Lutz, left, and Vice Chairman Robert Eaton. Story on Page 8.

Rising costs push Japan up market

RICHARD JOHNSON
Staff Reporter

TOKYO — Suddenly hemmed in by new caps on exports to the United States and Europe, Japan's carmakers are moving swiftly to upgrade the role of their fledgling luxury-car divisions.

Even at a time when their new-product budgets are strained by sliding profits and weak sales in their home market, the makers are forging ahead with plans to bolster their prestige-class franchises with new products and expanded dealer networks overseas.

"In Japan, all costs are rising," said Masayuki Mochizuki, industry analyst at W.I. Carr (Overseas) Ltd. in Tokyo. "They have to sell more luxury cars."

Toyota's Lexus and Nissan's Infiniti divisions have both an-

Makers decimate dealer discounts

Add-ons to invoice slash profit margin

PHIL FRAME
and JOHN K. TEAHEN JR.
Automotive News

A 1992 Buick Regal Limited coupe has a sticker price of $17,790 and a dealer discount of 18 percent.

That means a dealer should buy the car from General Motors for $14,588. If the car is sold for full sticker price, the dealer's profit is $3,202.

That sticker price and dealer discount are correct. But anyone who believes the profit figure needs to look further into puzzling world of dealer discounts, holdbacks, finance charges, advertising assessments, destination charges and dealer-buyer negotiations.

Automotive News examined the factory-to-dealer pricing structure in an effort to determine just how tough it is to make a buck in the retail auto business.

The conclusion: It is very tough indeed.

The average dealership's pre-tax profit margin was 1 percent of sales in 1991, according to the National Automobile Dealers Association. It was the same profit margin as in the previous two years, NADA said.

But the profit was realized in spite of the new-vehicle department, not because of it, NADA said. Dealers lost $112 per new vehicle sold to a retail customer last year, according to NADA calculations.

Huge margins between dealer costs and sticker prices just don't exist. The discounts at which dealers buy cars from their manufacturers or importers are adequate in many cases and penurious in others. In every case, holdbacks and the add-ons make the stated discount little more than

Cooper wins import dealer all-star award

Gary Cooper, a Nissan dealer in Long Beach, Calif., has won the Sports Illustrated All-Star Dealer Award.

Cooper, president of Long Beach Nissan and a 23-year Nissan dealer, was selected as the national winner from nine regional winners in the third annual contest.

All winners were selected by a panel of graduate business school deans and professors. The award is co-sponsored by *Sports Illustrated* and the American International Automobile Dealers Association.

Gary Cooper is president of Long Beach Nissan.

Cooper is scheduled to receive the award tonight at AIADA's Automotive Congress in Washington. (See story on Page 6.)

The award recognizes exceptional business performance, community service and commitment to the industry.

Big 3, Big Five together again

Pressure builds on the Japanese

MAX GATES
and RICHARD JOHNSON
Staff Reporters

The Japanese won't be bearing gifts, and President Bush won't be coming to dinner, but the chiefs of the eight U.S. and Japanese automaking giants again will sit down together, in suburban Chicago this morning, hoping to open the door of goodwill a little wider.

The meetings take place amid hopes of further calming the political waters on both sides of the Pacific, roiled by recession and economic competition since the Auto Summit I in Tokyo in January. Last week there was even talk of Auto Summit III before the end of the year.

The meeting, scheduled for 7:30 a.m. Central time at the Hyatt Regency Hotel in Oak Brook, was billed as a follow-up to the Tokyo talks. The agenda is determining what progress has been made in the past four months on Japanese Big Five pledges to increase purchases of U.S.-made auto parts and to help the U.S. Big 3 sell more cars in Japan.

But the scene has changed since

bill as "backdoor CAFE" legislation because it would have limited the burning of fossil fuels, such as gasoline. Industry officials estimated that the bill would require a corporate average fuel economy of 40 to 45 mpg in the next decade to hold total carbon dioxide emissions at 1990 levels.

Waxman hoped to attach his bill as an amendment to an energy bill now being debated in the House. But the bill faced a tough fight in Congress and probably would have been vetoed by President Bush.

— Max Gates

Mitsubishi, Mercedes fail

TOKYO — Mitsubishi Motors Corp. and Mercedes-Benz AG last week dropped plans to jointly produce a sport-utility for the European market. Officials said various "technical problems" could not be resolved.

The idea arose in 1990, when Mercedes proposed building a replacement for its Gelandewagen sport-utility that would be based on Mitsubishi's Pajero. To date, it is the most concrete proposal for cooperation to arise from continuing talks between the two automakers' parents, the giant Mitsubishi and Daimler-Benz groups.

Other proposals, such as joint production of a car in Europe, also have been studied and dumped.

— Mary Ann Maskery

Eldo and Seville get Allante ride

DETROIT — The 1993 Cadillac Eldorado Touring Coupe and the Seville STS with the Northstar V-8 will also get what is currently an Allante exclusive suspension system, according to a Cadillac service bulletin.

While previous electronic damping systems responded in the 120- to 150-millisecond range, the new system range is 10- to 15-milliseconds. At 60 mph, it reads once per inch of road.

Progress noted on trade pact

WASHINGTON — Rounds of intensified talks in late April and again last week in Toronto have produced progress in the automotive sector of North American Free Trade Agreement negotiations, sources say.

Negotiators have reached agreement on how "domestic content" would be counted. They also have agreed to eliminate so-called "roll-up" provisions, which allow a vehicle part to be counted as 100 percent domestic when it reaches a certain threshold of domestic content.

But there is still no agreement on the percentage of a vehicle that must be North American-made to qualify for tariff-free transport between countries.

— Max Gates

Brougham gets Fleetwood tag

DETROIT — Cadillac confirmed that the redesigned 1993 Brougham will be called the Fleetwood Brougham when the car hits showrooms this fall.

"We changed the name," spokesman Vince Muninga said, when asked why a photo of the new rear-wheel-drive Brougham in a recent stock prospectus identified the car as a Fleetwood.

The Brougham had been called the Fleetwood Brougham until the 1988 model year, when the Fleetwood switched to the same C-body platform as the DeVille. Muninga would not discuss 1993 model year plans for a C-body Fleetwood.

— Phil Frame

GM purchasing treads new path

DETROIT — Roy Roberts, manufacturing manager for General Motors' Flint Automotive Division, said global competition is forcing a new approach to purchasing.

Speaking to the National Association of Black Suppliers last week, Roberts urged the group to help change the face of the industry by being "absolutely focused on quality, cost and customer satisfaction."

He said GM is moving toward a strategy that requires suppliers to be able to compete anywhere in the world. He said the company will accelerate its efforts toward advance purchasing to get suppliers involved early in the design process.

Taurus, Sable wagons recalled

DEARBORN, Mich. — Ford Motor Co. is recalling 700,000 Ford Taurus and Mercury Sable station wagons to replace the latch on the rear storage compartment, or the latch on the cover of the footwell area for those vehicles equipped with a rear-facing third seat.

Ford spokeswoman Kathryn Blackwell says children have locked themselves inside the storage area and cannot unlock it from the inside.

The affected vehicles cover the 1986-92 model years.

Seat belt study: Toughen laws

WASHINGTON — The U.S. General Accounting Office released a study last week recommending that state safety belt laws be strengthened by requiring all occupants to buckle up, including those in trucks, vans and in rear seats.

In crashes, safety-belt use reduced the fatality rate and the serious injury rate by 50 to 75 percent, the study said.

Nissan adds assembly line

TOKYO — Nissan Motor Co. Ltd. last week opened a new assembly line at its Kyushu plant in a move that adds 240,000 units of annual capacity.

The $770 million expansion makes the plant Nissan's largest, with an annual capacity of 600,000 units. Nissan said the line will not increase overall capacity because it replaces two lines already scrapped at other plants.

Nissan said it will concentrate all Pulsar production at the plant, except for 5,000 units a month assigned to Fuji Heavy Industries. Other models will be added later.

— Mary Ann Maskery

briefly

Lido not Perot's choice for No. 2

Chrysler Corp. Chairman Lee Iacocca said he has been contacted by Texas billionaire H. Ross Perot, who is considering running for president as an independent. Iacocca declined to say what Perot's offer entailed except to say it was not the vice presidential post on a Perot ticket.

CANDIDATE DEBATE — While George Bush, Bill Clinton and H. Ross Perot chase one presidency, two names have surfaced across the Potomac in the race to succeed George Nield, who will retire Oct. 1 as president of the Association of International Automobile Manufacturers. One is Philip A. Hutchinson Jr., vice president of public affairs and general counsel at **Volkswagen of America Inc.** The other is Charles Lockwood III, the association's vice president and general counsel. Hutchinson supporters like his import industry experience, but some wonder if he can keep the delicate balance between Asian and European members. Lockwood supporters cite his record at the association, but his prior job at the Motor Vehicle Manufacturers Association could be a liability. As in the White House race, there's also a chance for more faces: The association has hired a headhunter to scout for other candidates.

WHAT'S MY LINE? We've never met Grace Lieblein, but we'd like to see her business card. We suspect that she has the longest title in the auto industry. On May 1, Lieblein became director of exterior trim, ornamentation, glass, general assembly integration and materials engineering for the vehicle engineering staff of the Lansing Automotive Division of **General Motors.** If she had been promoted a month earlier, her title would have been even longer. It would have included the words **Buick-Oldsmobile-Cadillac** Group.

SEGMENT STAYING POWER? With the new **Jeep** Grand Cherokee barely out of the starting gate, **Ford Motor Co.** already is boasting that the Jeep never will catch Ford's red-hot Explorer sport-utility. A release issued by Ford Motor's Truck Operations noted that the Explorer is offered in more models, is cheaper and is roomier than the Grand Cherokee. The release also said word-of-mouth advertising from love-struck Explorer owners will keep the 3-year-old Ford truck at the top of the sales charts.

HOW TIME FLIES — Neither shareholders nor **Ford** officials had much to say, and the company's 37th annual stockholder's meeting last Thursday was completed in a record time of one hour and 37 minutes. The shortest meeting on record had been one hour and 47 minutes in 1971. Stockholders voted on four proposals and addressed only about a dozen questions to Ford Chairman Harold Poling. One of the more amusing statements came from a shareholder who told Ford executives that he thought General Motors' ads were more catchy than Ford's. His advice to the company: When advertising the Taurus, use the tag line "America's most copied car." Poling said that he would consider the advice.

Sales comeback slips off the rails

ARLENA SAWYERS
Staff Reporter

BY THE NUMBERS

10-day sales results > 37

Imports stocks steady > 37

The industry's on-and-off sales recovery was off again in early May.

Sales of cars and light trucks for the first 10 days of May fell 3.6 percent from last year, as measured by the daily selling rate. Actual sales were down 14.5 percent, but the early-May period had eight selling days this year and nine last year. The totals were 261,460 this year and 305,616 in 1991.

The Big 3 sold 201,556 cars and light trucks, a 1.6 percent decrease. Like other percentages in this article, that decline was calculated on a daily sales rate basis.

Japanese makes accounted for 54,388 sales, a 10.3 percent slide. Sales of European imports dropped to 5,575, down 10.8 percent, and the Korean total of 3,029 was up 3.6 percent.

While General Motors sales were down 5.7 percent, some divisions had good news. Pontiac, up 37.1 percent, attributed its success to the Bonneville, the Trans Sport and especially the Grand Am.

"Now that Pontiac dealers have a supply of vehicles that matches demand, we expect Grand Am's momentum will build to an even higher rate," said Pontiac General Manager John Middlebrook.

Import-fighter Saturn scored a 143.4 percent gain over last year when its dealers were still stocking up, and Cadillac posted a 15.9 percent gain.

Chrysler Corp. sales were down an estimated 1.7 percent. Ford Motor Co. deliveries rose 4.6 percent.

Domestic light-truck sales, which were strong in April, were 0.8 percent above early-May in 1991. Ford and Chrysler were up on a daily-rate basis; GM dropped.

Sales of imported trucks slipped 15.05 percent.

American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc. reported double-digit 10-day sales declines. Honda was down 18.2 percent and Toyota was down 21.3 percent. Nissan Motor Corp. in U.S.A. fell 4.5 percent. AN

U.S. sales of the new Galant begin next spring; pictured is the version for Japan's market.

Mitsubishi unveils new Galant

TOKYO — There's a lot of Diamante in Mitsubishi's all-new Galant/Eterna sedan, unveiled last week. Beyond its styling cues, the front-wheel-drive car also takes Diamante's 24-valve V-6 engine.

For Japan's market, engines range from 1.8- and 2.0-liter fours to 1.8- and 2.0-liter V-6s. The 1.8 V-6 produces 135 hp, and the 2.0-liter makes 145 hp with a single overhead cam, 170 hp with double overhead cam and a whopping 240 hp from a twin-turbo version.

The Galant is the first Mitsubishi model — and possibly the first in the world — to come equipped with an electronic-control system based on a fuzzy-logic chip.

The system, called INVECS for intelligent innovative vehicle electronic control system, makes continous, automatic adjustments to the car's all-wheel-drive and four-wheel-steering systems, traction control, transmission, suspension and air conditioning in response to road and weather conditions.

Fuzzy logic is a form of artificial intelligence that is able to distinguish such ambiguous parameters as "slightly icy" or "warm."

The new Galant is wider and longer than its predecessor, but not as tall. Width is 68.1 inches; length, 181.5 inches; height, 55.1 inches; and wheelbase, 104 inches.

Mitsubishi said it hopes to sell 7,800 units a month in Japan, at prices ranging from 1.37 million yen (about $10,540) to 3.37 million yen ($25,900).

The new Galant will be launched in the United States next spring.

AIADA convention targets trade, luxury tax issues

MAX GATES
Staff Reporter

WASHINGTON — Despite hard times in the auto industry — or maybe because of them — this week's annual meeting of import dealers is expected to draw 25 percent more people than last year's.

More than 1,000 participants are expected at the 15th Automotive Congress of the American International Automobile Dealers Association, which began here Sunday night.

The reason: growing concern that legislation debated in Congress will add to the problems of import dealers, even as the economy continues its slow recovery. Chief topics on dealers' minds are:

- Trade bills that would restrict sales of Japanese-badged cars and trucks.
- Repeal of the 16-month-old luxury tax, which has hit hardest at high-line European imports.
- The possibility of a 10-fold hike in the duty on imported minivans and four-door sport-utilities.

"Dealers are also concerned about the Buy American stuff," said Paul Donnellan, AIADA director of congressional relations. "The whole mood and tenor of politics concerns them right now."

The three-day session was scheduled to open this past Sunday night with a briefing on key issues before Congress. AIADA has set aside Tuesday afternoon for members to lobby their representatives and senators.

"The dealers are coming to town at just the right time," said Walter Huizenga, AIADA executive director. The next three weeks will be critical as Congress debates trade legislation, he said.

And, while the Bush administration has apparently backed off from proposals to raise the tariff on minivans and four-door sport-utilities from the current 2.5 percent to 25 percent, the issue is still alive in Congress. "That could be devastating to dealers who sell those vehicles. It's an important market for them," Donnellan said.

He noted Congress may be particularly attentive to dealers this year: "There's a lot of concern about turnover (in the House and Senate), and Congress isn't exactly high in the popularity polls."

In addition to a series of legislative briefings and profitability workshops, AIADA has scheduled several speakers. They include Paul Tsongas, former Democratic presidential candidate; Jack Kemp, secretary of housing and urban development; Dick Cheney, secretary of defense; Sen. Alan Simpson, R-Wyo.; Clark Vitulli, chief operating officer of Mazda Motor of America Inc.; Keith Crain, publisher and editorial director of *Automotive News;* Rep. Sam Gibbons, D-Fla., chairman of the House subcommittee on trade; and economist Larry Kudlow. AN

Saturn ups sales-per-dealer lead

KAREN DETKOWSKI
Staff Statistician

Saturn dealers' sales-per-dealer measure dipped by five units in April, but the gap between the franchise's average and that of the competition continued to widen.

Saturn averaged 110 units per outlet for the month, vs. 116 in March and 58 a year ago.

Toyota, No. 2 in March with a 75-unit average, managed to hold onto its rank despite an 11-unit decline in April. Its average is now 46 units behind Saturn's.

According to *Automotive News* sales-per-dealer calculations, 12 makes reflected increases in April, 14 fell and 12 remained constant with March results.

Within the top 10 franchises, Nissan car and truck dealers upped their average by six units, and Mazda dealers sold five more units per dealer. Mazda had its best month yet for the new MX-3 sports coupe and the Protege compact sedan, setting an all-time monthly passenger car sales record for the company.

Ford Division gained one unit on the strength of rising truck sales, and Chevrolet rose one unit on both its car and truck sides.

Mitsubishi dealers, although not among the top 10 leaders, increased dealer averages by nine units, the highest increase for the month. Mitsubishi announced an all-time monthly sales record for the domestically produced Eclipse.

The average for Yugo America Inc., which declared Chapter 7 bankruptcy in April, is no longer calculated. ■

Bill to change liability law inches ahead

MAX GATES
Staff Reporter

WASHINGTON — Backers of a national product liability law say they moved a step closer to their goal after a Senate vote last Wednesday.

That vote was only on a rules technicality. And the product liability issue, which was part of package of legislation, was never debated or voted on by the full Senate. But the vote should help build momentum in the Senate for passage, perhaps later this year, said Bill Fay. Fay is executive director of the Product Liability Coordinating Committee, the group pushing the legislation which includes the Big 3.

The bill would create a single, national product liability law, replacing 50 different state laws. It has broad support from Republicans and Democrats. But it is opposed by powerful legislators, including Senate Majority Leader George Mitchell, D-Maine. Mitchell, in fact, pulled the package from the Senate's agenda after the rules vote.

Among other provisions, the legislation would provide incentives for out-of-court settlements, create a uniform standard for awarding punitive damages in liability lawsuits, and eliminate the "joint and several liability" rule that enables plaintiffs to collect damages from the richest defendant regardless of responsibility. A uniform liability system would make risks of producing and selling products more predictable, supporters say. ■

Building YOUR Sales Future!

Lease program gives Mercedes S class a big boost

JIM [illegible]RY
Staff Reporter

NEW YORK — Mercedes-Benz of North America Inc. doesn't like to phrase it this way, but the company's new Win-Win lease campaign could be a remedy for sticker shock, especially for the flagship S class.

While overall sales of imported cars dropped in April, sales of Mercedes' top line shot up 77.7 percent over last year.

The 2,396 S-class sales topped this year's previous monthly high by almost 1,000 units.

But Mike Jackson, executive vice president of the importer, disputes the sticker shock remedy concept. "I wouldn't put it that way at all," he said.

"All you have to do is look around the marketplace. Every competitor is out there with lease programs, and we don't intend to be above the fray."

"We have a great deal of satisfaction with the way the car has been received, with a median price around $80,000, considering the economy and the luxury tax," he said.

Whether or not you call it sticker shock, S-class prices took a giant step last fall. At $69,400, the least expensive model, the 300SE, jumped $15,500 over the 1991 model.

The 1992 S-class also includes the 300SD, 400SE, 500SEL and 600SEL.

Initially, the new S class "wasn't very successful," said Peter G. Terian, co-owner of Rallye Motors Inc. (BMW/Lexus/Mercedes-Benz/Rolls-Royce) in Roslyn, N.Y. "But since the April special lease plan, business has totally turned around. We just had our biggest week in 34 years." He said half of his Mercedes sales in April were S-class cars, an unusually high proportion.

Nationwide, S-class sales of 2,396 in April were 38.3 percent of Mercedes' total.

Through March, Mercedes was running well below its goal of 20,000 S-class sales for the model year. But April closed the gap, prompting Jackson to say Mercedes might still "get close" to the target.

"The car is $10,000 cheaper this way," Terian said of the Win-Win lease.

Under the Win-Win lease, the monthly payment for the 300SE is $865.98. For 36 months, that's $31,175.28, which is an awful lot less than $69,400.

In its Win-Win advertising, Mercedes has been emphasizing that monthly-payment-times-36 number. So far, Mercedes hasn't advertised the new lease program on S-class cars, but the special deal is available on all 1992 models.

"Now, the perception is of value," Terian said.

He said that on a four-year lease, the monthly payment on the 500SEL can be $250 less than on a conventional lease. On a three-year lease, the 500SEL goes for $1,232.42 a month, or $44,367.12. The retail sticker is $93,500.

U.S. sales of all cars built outside the United States and Canada dropped 5.87 percent in April. Through April, sales were 82 units below 1991. ■

Mystery Shoppers Tell It Like It Is!

WESTERN DIVERSIFIED
Mystery Shopper Program

Are your salespeople following the guidelines you've set? Do they appear competent to your customers? Is all your traffic accounted for? Are you getting the most from your training and advertising budgets? The WESTERN DIVERSIFIED Mystery Shopper Program can help solve these mysteries and provide answers to many other questions.

The WESTERN DIVERSIFIED Mystery Shopper Program is the best, most comprehensive in the industry. Find out how WESTERN DIVERSIFIED can customize a Mystery Shopper Program for your dealership.

Call or write today. 1-800-323-5771. Ask for Rob Mancuso.

WESTERN DIVERSIFIED

Champion offers scholarships

TOLEDO, Ohio — The Champion Spark Plug Co. is offering tuition scholarships of up to $2,000 for the children and grandchildren of ASE-certified technicians who plan to pursue an education and career in auto service technology. Application deadline is June 26.

Champion will award eight Legacy Scholarships, one in each of its national sales regions. The award will cover tuition, fees and classroom materials. The scholarship is renewable for a second year for recipients who maintain at least a 2.5 grade point average.

Applications are available at many high school career guidance officers or by writing to Champion Legacy Scholarships, P.O. Box 910, Toledo, OH, 43661, attention Dick Parker.

Ford, Johnson mark anniversary

MILWAUKEE, Wis. — Ford Motor Co.'s Parts and Service Division received an award from Johnson Controls Battery Group marking the 10th anniversary of a partnership between the two.

Johnson Controls Battery Group is the manufacturer of Motorcraft batteries and has been the sole supplier to the Parts and Service Division since 1982.

Both groups renewed their support for efforts to recycle lead-acid batteries.

Changes don't rattle GM service

DALE JEWETT
Service Editor

WARREN, Mich. — General Motors' new North American Operations is paying attention to the automaker's approach to service as it reviews all aspects of the business.

If changes are going to be made, it's likely the new course of action will be mapped out soon, said Richard Lannen, director of the Service Technology Group.

Lannen: too soon to tell

But Lannen said he doesn't know if there will be any changes.

"Right now, it's too soon to tell," he said.

In the meantime, the Service Technology Group is implementing several programs developed and instituted over the past couple of years tailored to GM's philosophy of "service as product." Among them are:

- A network of field technicians that tend to problems reported at dealerships, feeding their experience back to the platform teams to aid the development of future models.
- Converting service departments at GM dealerships to a paperless repair order and information system.GM is converting to a compact disc-based service information and repair and will phase out printed service bulletins and manuals in the future.
- Integration of new technologies — many of them mandated by law — such as the introduction of chlorofluorocarbon-free air conditioning refrigerant on several models for the 1993 model year and a universal on-board diagnostic system.

In the North American Operation organization announced in late April, Lannen's Service Technology Group was placed under the North American Vehicle Sales and Marketing Group headed by Michael Losh.

While the reorganization may have appeared cataclysmic to outside observers, Lannen characterized the changes as part of a natural progression of streamlining that has been in progress for several years.

The most immediate and apparent result of the management changes has been a new-found sense of urgency within GM, Lannen said, a change he believes is beneficial to the automaker.

But the changes have not disrupted the Service Technology Group's work with the automaker's platform teams or dealers.

The group recently completed an equipment program launched in February at the National Automobile Dealers Association convention in Dallas to ensure that every GM dealer has the capability to use compact discs to service vehicles.

The discs, produced by GM, store service information that will eventually reduce the dependency on printed service manuals. When connected to a GM vehicle via the assembly line data link, the discs can be used to reprogram computer chips. One of the main benefits of the system is it will hold down the number of different types of replacement chips dealers will need to stock.

Lannen said all GM dealers are signing up to have compact disc compatible units, with most to have the equipment in place in time for the start of the 1993 model year this fall.

Group asks EPA to ban sale of CFC-12 replacements

The Mobile Air Conditioning Society has asked the EPA to prohibit the sale of refrigerants, chemicals or blends intended to replace CFC-12 in motor vehicle air conditioning systems.

The trade association also is trying to block the sale of adaptors required for installation of these refrigerants until standards for retrofit refrigerant procedures are completed. The SAE is developing these standards at the request of the EPA.

The group is concerned about certain "drop-in" chemicals and chemical blends offered for sale to replace CFC-12 in existing automotive air conditioning systems. The group said there is no known "drop-in" replacement for CFC-12, and it knows of no original equipment or aftermarket air conditioning system manufacturers that have approved the use of any of these substances in their systems.

The replacement items are not compatible with current automotive air conditioning system designs and can cause system failures and higher emission rates, and in some cases, can become flammable or combustible.

The replacement chemicals and blends also are incompatible with the current automotive air conditioning recovery and recycling equipment required under the Clean Air Act.

Those refrigerants will be drawn into recycling equipment being used to service air conditioning systems. This not only will result in problems for the equipment, but also will transmit the contaminated refrigerant to all other vehicles being serviced.

An additional problem, the group said, is the production and sale of service hose adaptor fittings to allow introduction of HFC-134a and various refrigerants, chemicals or blends into air conditioning systems designed for CFC-12. This will increase the chances that systems and refrigerant supplies will become contaminated.

"The combination of these factors create a situation in which the likelihood exists that consumer and professional service technician confidence in the recovery and recycling program may be lost, and indeed may result in substantial consumer litigation in certain sectors of the industry," said Simon Oulouhojian, executive director of the society.

"We are asking the EPA, SAE and the industry for the time to conduct these studies, evaluate the various choices and develop a retrofit program that will meet the goals of the Act," he said, "and properly protect human health and welfare, and the environment."

School gathers data for Chrysler

HIGHLAND PARK, Mich. — Chrysler Corp. has enlisted the help of Southern Illinois University in a research project to generate data for Chrysler's Mopar Diagnostic System.

The Automotive Technology program at the university's College of Technical Careers has agreed to conduct advanced research in gathering engine performance data this spring. The project could continue indefinitely.

The research requires making hundreds of recordings of several engine families in various performance modes. The recordings will be used as graphic "overlays" for technicians to compare with data from suspect circuits in a malfunctioning vehicle.

Also participating in the project are Chrysler's Service and Parts Operations' diagnostic development department and Management Information Systems Group, along with IBM and Bell and Howell, suppliers for the diagnostic system.

"Students get inside experience in data acquisition research for use in leading-edge diagnostics technology. We can put their findings to immediate practical use in helping to better serve our customers," said Robert Knox, manager of diagnostic development.

The Modular Diagnostic System is a computer-driven tool to help dealership service technicians troubleshoot and service electronic controls on vehicles.

Service business rises

Double-digit jumps in sales of shop parts and in sales of all parts and accessories pushed the Automotive News Service Index higher in March.

Parts and service business for the month was 110.2 percent of the amount recorded in March 1991.

For the first quarter of 1992, parts and service business was 103.5 percent of that in the same period last year.

March was marked by a 12.8 percent rise in sales of all parts and accessories and a 12.4 percent increase in shop parts sales. Gross profit on all labor and parts and accessories sales rose 7.5 percent; total labor sales rose 5.4 percent; and repair orders written were up 1.2 percent.

March's gains also made the sales of all parts and accessories and shop parts sales the leading indicators for the quarter, both up more than 5.5 percent. Gross profit on all labor and parts and accessories sales rose 2.5 percent.

Figures used in the Service Index are compiled from a cross-section of new-car dealerships.

SERVICE INDEX
110.2*

	March, '92 vs March, '91	Jan.-March, '92 vs Jan.-March, '91
Gross Profit on All Labor and P&A Sales	+ 7.5%	+ 2.5%
Repair Orders Written	+ 1.2%	+ 0.5%
Total Labor Sales (Customer & Warranty)	+ 5.4%	+ 0.6%
Shop Parts Sales (Customer & Warranty)	+ 12.4%	+ 5.8%
Sales of All P&A	+ 12.8%	+ 5.7%

* Survey by Automotive News shows that dealers' service and parts business in March 1992 was 110.2 percent of business in March 1991. Service business in 1992 was 103.5 percent of business in the corresponding period in 1991.

Wisconsin passes crash parts law

MADISON, Wis. — Insurance companies will have to notify consumers of the use of non-original parts to repair motor vehicles damaged in crashes, and manufacturers must put labels containing their names on replacement parts, under a Wisconsin law that goes into effect Jan. 1.

The penalty for the dealerships or body shops selling unlabeled replacement parts is $500 per day. This applies unless the same company made the replacement part and the vehicle.

The bill was developed by negotiations among auto dealers, insurance companies, junk dealers and the Legislative Council, a standing nonpartisan part of the state Legislature that appoints legislators and public members to long-term committees for developing laws.

— *Sally Garbo Wedde*

DISCOUNT

Invoice add-ons slash dealer profit

continued from PAGE 1

a starting point.

It is a bit like the sticker price itself. The sticker is seldom the transaction price, but it is the best way to compare the prices of competing cars.

Take the Buick Regal Limited coupe (see table at right). Based on the 18 percent discount, the dealer would pay 82 percent of the $17,790 sticker price to acquire the car. That would be $14,588.

But the car is invoiced at 13.2 percent, with 3 percentage points ($534) going into a holdback fund and 1.8 percent ($320) retained by GM to help the dealer cover bank interest for keeping the car in stock.

So far, that $14,588 car has cost the dealer $15,442, and the assault on the dealer's margin is by no means finished.

The destination charge adds $505 to the invoice (and the sticker, too) and an advertising charge tacks on another 1.0 to 1.5 percent — call it $265 — to the invoice.

Dealer cost now is up to $16,212.

Add a few items of optional equipment ($1,355 retail/$1,152 invoice) and dealer cost is $17,364 with a retail sticker of $19,145 plus $505 for that troublesome freight charge: $19,650.

If the car is sold for full sticker price — which is next to impossible in this market — the gross would be $2,286. But it is likely that more than $1,000 will be bargained away to make the sale. At a selling price of $18,500, gross profit is $1,136, minus 25 percent to the salesman.

To his $852 profit, the dealer adds $574 in holdback from the car and options and deducts, perhaps, $150 for floorplan expense.

That leaves $1,276, or 7.3 percent profit on a piece of merchandise that cost $17,364 to put into the showroom.

It indicates why such items as the finance reserve and the sale of credit life insurance and extended-service contracts are so important to car dealers.

According to NADA, low grosses are the reason dealership new-car departments were money losers the past two years.

The gross margin on new vehicles retailed in 1991 was barely above 7 percent at the average dealership, NADA said.

The average gross was 7.5 percent in 1990 and 9 percent in 1983, according to the association.

HELP FROM HOLDBACKS

The holdback is a major factor in keeping many dealerships afloat. It is sort of a non-interest-bearing Christmas Club.

All Big 3 cars and light trucks, and some import vehicles, have holdbacks.

On Big 3 vehicles, the holdback is 3 percent of the sticker price of the car and factory-installed options.

The 3 percentage points are shaved off the dealer's discount. The manufacturer holds the money and pays it back to the dealer, usually quarterly.

Because of thin margins, the holdback may mean the difference between profit and loss for a dealership.

GM began a 1 percent holdback on all cars except Cadillac in the 1960 and 1961 model years. The GM holdback went to 2 percent for all cars for the 1962 model year.

The holdback on all Big 3 vehicles now is 3 percent.

To compensate dealers for the use of their funds, GM adopted 15-day delayed billing when the holdback was instituted.

That meant that dealers did not have to pay for a vehicle as soon as it hit the asphalt on their lot.

The period now is 16 days from the end of transit time at GM and about the same at Ford Motor Co. and Chrysler Corp.

If the dealer sells the car within that span, he has no floorplan expense.

FLOORPLAN AID

Floorplanning is the dealer's method of financing his inventory. Few dealers pay cash for their vehicles. They borrow the money from a bank or finance company and pay interest on each vehicle until it is sold

Dealers' floorplanning cost typically is one percentage point over the prime rate. Last week, the prime was 6.5 percent.

Floorplan assistance is another part of Big 3 procedures.

The programs began during the recession of the early 1980s when floorplan rates rose to 20 to 22 percent and were eating dealers alive.

At 20 percent, the cost of floorplanning a car with a $12,000 invoice price was $2,400 a year, or $200 a month. If it sat on the lot for three months, the dealer had $600 tied up in floorplan expense, which may have been more than he made when the vehicle was sold.

In 1991, the average dealership paid $228 in floorplanning per new car retailed, NADA estimates.

At GM, 1.8 percent of the sticker price is retained by GM.

The company uses the money to guarantee the dealer a lower percentage rate for a certain number of days.

After that period, the floorplan rate returns to its normal one point over prime.

At Ford, the floorplan assistance charge is an invoice add-on and is not part of the dealer discount structure.

The amount charged to dealers is based on a Ford Motor Credit Co. formula tied to the prime rate.

Dealers are assessed a certain amount — it differs by model and car line — for each car or truck they buy from the factory.

The dealer assessment and a factory contribution are returned to Ford dealers to help them pay floorplanning expenses.

At Chrysler Corp., the finance charge also is an invoice add-on. It is returned to the dealer to help defray floorplan expense and, as at Ford, it is not part of the dealer discount structure.

Destination charges, an add-on to both the invoice and the retail sticker, are paid by the dealer when he pays for the vehicle and are passed on to the customer as part of the transaction.

The dealer who doesn't build the destination charge into the selling price is in deep trouble. The fee ranges from $255 on a Geo Metro convertible to $700 on a Porsche.

Including the destination charge in the sticker price would make sense, but it wouldn't please the manufacturers and importers.

It would increase the sticker price, but it would bring the automakers and importers no additional revenue — they already collect it as an invoice add-on.

Whether the dealer collects it in the selling price is the dealer's problem.

Rick Kranz, chief editor of the copy desk, and Staff Reporters Kathy Jackson and Arlena Sawyers contributed to this report.

Holdback works as dealer safety net

For some, it's a big chunk — or all — of gross profit

MARY CONNELLY
Staff Reporter

Many dealers consider the holdback allowance their financial safety net. Although not widely used by Japanese and European importers, the holdback has been part of the Big 3 dealer discount structure for 30 years.

In essence, the holdback is an enforced "Christmas Club" or savings plan for dealers.

On every vehicle purchased by the dealer, the manufacturer or importer withholds a percentage of the wholesale price. The accumulated money is then paid to the dealer in a lump sum on a scheduled basis, usually quarterly.

The holdback allowance on domestic vehicles is 3 percent of the sticker price (3 percentage points of the gross dealer discount). It is 2 percent for most of the importers that use the procedure.

No interest is paid on the funds withheld. But to offset that, automakers usually provide dealers 10 to 20 days of delayed billing. The makers say that the floorplan interest saved by delayed billing balances the interest that is not paid on the holdback money.

Dealers use the accumulated savings for a wide range of purposes. Some stage special vehicle promotions when the holdback money arrives. Many roll the holdback funds into their dealerships' general operating funds.

But dealers emphasize the importance of the holdback. For many dealers in today's sluggish market, it represents a substantial amount of a dealership's gross profit. Often, it is the difference between black ink and red ink.

It is not an inconsequential sum. On a Ford Escort, it can be as little as $250. On a Cadillac Seville, it can top $1,200.

A Chevrolet dealer selling 400 new cars and 400 new trucks a year might pick up at least $350,000 if his or her sales pattern follows the national mix.

"The holdback is an absolute necessity to a dealership's well-being," said the general manager of a Mitsubishi dealership in Florida. Mitsubishi, Nissan and Mazda are the only major Japanese makes that use the system.

Several dealers said that as a store policy, they refuse to sell vehicles below invoice. But because of the holdback allowance, they know they will at least reap the holdback percentage from the vehicle sale.

"As a store policy, we don't go less than holdback," said Kelly Westlake, general manager of University Mazda in Albuquerque, N.M. "But we know that we have that holdback if we sell at invoice."

Added Tim Holm, general manager of Holm Automotive Center Inc. in Abilene, Kan., "Most of us retain the 3 percent for gross and don't sell under invoice very often." Holm Automotive Center sells Chevrolet, Oldsmobile, Buick, Pontiac, Cadillac and Geo.

Noted a Nissan dealer: "I may sell with the holdback as profit if I have a lot of the same cars in inventory. It does come into play when working a car deal. I may sell for dead invoice, pay the salesman's commission and be done."

He said the holdback facilitates vehicle trades among dealers.

"On a dealer trade, the selling dealer keeps the holdback and the buying dealer has already sold the car and is making something," he said.

The holdback also offsets costs such as floorplanning, dealers said. For example, if a vehicle is carried in inventory for six months at $200 a month and is sold for only $500 over invoice, the holdback allowance helps offset the $700 lost in floorplan expense.

But a domestic dealer in the Midwest said some salespersons do not like the holdback because they do not receive a commission on it.

"The factory gives the money to the dealership, and the salesmen can't get into the holdback percentage," the dealer said.

Holm said he would accept an increase of half a percentage point in the holdback.

"To most of us, that money is sacred," he said. "You don't dip into it. Another one-half percent wouldn't bother me. It's a self-imposed savings account."

When the holdback money arrives at the dealership, it is put in a special bank account to offset floorplanning costs, Holm said. "For me, it's like automatic savings withholding."

Uses of the money vary.

"I put it into operating funds," said Mark Paladino, a co-principal in Mark Ford-Mercury in New Milford, Conn. Many dealers do the same.

Wayne Petersen of Petersen Chevrolet-Buick in Fairbury, Ill.; Petersen Motors (Chrysler-Plymouth) in Gibson City, Ill.; and Petersen Chrysler-Plymouth-Dodge in Fairbury, Ill., said he uses two holdback payments to pay real estate property taxes. The other two payments are used for staff bonuses, vehicle incentives or capital improvements at the dealerships.

"I increase my advertising budget a bit," said a Nissan dealer.

A Mitsubishi dealer agreed: "We usually use it for additional promotions in sales and advertising."

Canada sales continue dip with 11.3% falloff in April

ANNE E. WRIGHT
and JEREMY SINEK
Automotive News

Sales of light-vehicles in Canada dropped 11.3 percent in April as car sales continued to skid and trucks took their first dip since last October.

Car sales fell 10.2 percent, failing to beat their year-ago totals for the fourth straight month. Trucks dropped 13.6 percent after being the industry's bright spot during the first quarter.

Automakers are putting a brave face on April's disappointing sales figures.

Ford spokesman John Jelinek described them as "a blip — an anomaly in the sales trend."

Ford had double-digit decreases in cars and trucks. For the year, Ford trucks are up 12.4 percent and cars are down 10.7 percent.

General Motors of Canada took solace in beating the market despite a 9.9 percent sales decline for the month.

"You'd expect this April to be reasonably strong because of the talk of recovery, but we're really not seeing that in our industry," said spokesman Stew Low.

He cited low consumer confidence and real interest rates that are still high in Canada compared with the United States.

For the year, total light-vehicle sales in Canada are off by 4.6 percent. Trucks have been up 1.4 percent, while cars have fallen 7.4 percent.

Chrysler Canada trucks were the only portion of the Big 3 to post an increase in April, up 5.6 percent from the year-ago month. That included 595 Jeep Grand Cherokees, which went on sale April 19.

Companies reporting increases for April include: BMW, up 13.0 percent; Jaguar, 15.4 percent; Nissan, 23.5 percent; Subaru, 1.5 percent; Volkswagen, 5.1 percent and Volvo, 22.6 percent. AN

Pension funds cast wary eye at GM issue

CHRISTINE PHILIP
Crain News Service

Pension fund executives are skeptical of General Motors' ability to turn itself around soon, but some intend to take a look at the company's new $2.4 billion common stock issue.

"We are considering the stock offering and are seriously looking at GM," said Roland Machold, director of the $31 billion New Jersey Division of Investment. "But whether we buy any more will take a well-demonstrated change in the company. They keep talking about change but keep falling short of success." New Jersey holds about 3.5 million shares of GM stock.

Machold said he has been talking with GM officials for many years, and "I mean what I say kindly. I look at General Motors, and their attitude is of knowing what to do but not actually doing it. They know what their problems are, but they can't seem to do anything about them."

Sharon Scrogham, equity manager for the $2.4 billion New Mexico Educational Retirement Board, said, "I have a positive feeling in general about General Motors, assuming they're able to restructure. But that is a big 'if.' "

The New Mexico fund holds about 260,000 GM shares, up slightly from Jan. 1. Scrogham said fund executives hope to see GM produce more vehicles, control costs better and stabilize its market share. "There is a certain amount of taking them on faith," she added. "GM has to focus on quality in the future, like all U.S. auto manufacturers."

New Jersey's Machold pegs GM's success to that of the economy. If the economic recovery is strong, Machold said, GM has a "good chance to succeed. GM has another leg on life, but has yet to solve its systemic problems."

Anthony Gray, president of Sun-Bank Capital Management N.A. in Orlando, Fla., said his firm "has used the stock in the past and would be candidates to buy more. We are reasonably positive right now with what is happening."

He cited several factors that contribute to the feeling GM will do better, including an improvement in the auto industry generally, the GM product line, improved general management and the acceleration of cost-cutting measures.

But Gray also has some reservations about GM's future. "We want to get the feeling that they are taking major action to improve profitability," he said. "The direction in the past has been acceptable, but has not been fast enough. They know that they have to fix broken areas within the company, but have been slow to do so thus far."

Nevertheless, Gray said Sun-Bank Capital likely will buy GM stock within the next few months, although not necessarily in the new offering. "The $40 per share area is attractive. If GM shares came in today at $40, we'd be buying."

Some pension funds are not holding large portions of any auto stock. Richard W. Steenken, managing director of domestic equities for the $4 billion Atlantic Richfield Co. pension fund in Los Angeles, said his firm does not hold GM stock now. The fund recently "bought a little bit of Ford stock, but we are riding the market, staying away from auto stocks."

"Why should we bail them out?" he asked. "There are still enough reasonable investments out there so that we don't have to pay for the de-leveraging of America."

An investment officer at a large pension fund, who asked not to be identified, said of GM: "I don't see anything that the company has done to improve the situation. Nothing it has done addresses the underlying financial problems."

The officer added, "The auto industry in general is so dangerously mismanaged that it may actually give us our second double-dip recession in the second half of the year, if they overproduce and don't get profitable fast." AN

New GM stock to cut pension debt

Issue aimed at unfunded liability

CURTIS VOSTI
Crain News Service

NEW YORK — General Motors' planned contribution of up to $500 million of new company stock to its pension plans is targeted to reduce GM's $8.6 billion unfunded pension liability.

It also could be used to save cash that otherwise would be used for minimum contributions in coming years, as the auto giant restructures in an attempt to remain a viable company. The contribution of common stock to GM's $34 billion defined benefit plans will be made after $2.4 billion of new common stock is issued.

W. Gordon Binns, president of General Motors Investment Management Corp., the subsidiary that oversees investment management of GM's $40.8 billion in employee benefit assets, said the company announced the pension fund's stock contribution at the same time as the public stock offering to let investors know about the additional dilution of the more than 600 million shares of common stock outstanding. The two offerings constitute an approximate 11 percent dilution of existing shares.

The stock contribution will be a supplement to an unspecified cash contribution, the company's first since the mid-1980s. GM expects to contribute up to 12 million shares to the pension fund.

In its last contribution to the pension fund, in 1987, the company provided 19.6 million shares of a new preference stock valued at an average of $53 a share, or a $1.04 billion contribution.

The 1987 preference stock contribution took advantage of tax laws allowing GM to deduct the contribution from its 1986 taxable revenue. Because of that contribution — and large cash contributions in prior years — GM built up enough credits to skip making another pension contribution until this year, Binns said.

This year, the company will make an unspecified cash contribution, less any remaining credits, he said. Together, the contribution and credits will be enough to meet minimum funding standards for its hourly plan, which is about 30 percent underfunded.

GM officials haven't determined how much of the stock contribution will be used to chip away at its underfunded hourly workers' pension plan or to meet expected liabilities of its overfunded salaried pension plan, said assistant treasurer Ed Sabisky. The contribution could be evenly divided.

Sabisky said the salaried plan will feel the brunt of early retirement liabilities stemming from the company's December 1991 announcement it would eliminate 80,000 jobs by 1995. The salaried plan will continue to be fully funded even with the incurred early retirement liabilities.

Sabisky, explaining the rationale for the stock contribution, said that "from the corporate standpoint, looking at a loss of $4.5 billion last year, a sense of equity led us to think maybe a good objective is to make a dent in the underfunding of the plan."

The UAW had no comment on the planned stock contribution.

Mike Gordon, a Washington-based Employee Retirement Income Security Act attorney, said using the stock contributions to chip away at underfunding isn't necessary because the minimum funding standards are designed to do just that over a specified amortization period. "It seems that they want to conserve as much cash as they can in the next four to five years," he said of the contribution.

He suggested another motivation might be to blunt the efforts of the Pension Benefit Guaranty Corp. to raise the minimum funding standards for plans like GM's that are the largest underfunders.

Whatever the motivation, he said, the real issue is whether the company's pension plan should be forced to accept GM stock in lieu of contributions, which is what would happen if the company used the 1992 contributions to avoid making cash contributions in future years.

Gordon would like to see the U.S. Department of Labor treat the stock contribution as it would a prohibited transaction — with a public notice of the intended contribution and a published exemption to allow it.

Binns said when the corporation decided to make the stock contribution, the pension plan hired a third-party fiduciary to approve it before agreeing to the plan.

The flow of the stock contributions, to be made between August and December, will depend on economic conditions, Binns said.

He said the contributions will be managed — by one or more managers — to the benefit of the plan participants, as described in the prospectus.

The managers will have full discretion on the stock and, unlike the 1987 contribution, will have no limitations on the timing of the selling, he said.

Binns said GM already has made some cash contributions to the plans this year, and additional cash contributions will be made to meet the minimum funding standards. He declined to state the amounts. AN

Japanese puzzle over Honda's NSX bubble

RICHARD JOHNSON
Staff Reporter

TOKYO — The collapse in demand for Japan's most adventurous leap into the luxury-performance field, Honda's Acura NSX sports car, has left Japanese auto executives puzzling over what it all means.

The aluminum-bodied, 270-horsepower two-seater was introduced in 1990 to rave reviews and a crush of orders that quickly swelled the backlog to more than two years. Less than 12 months ago Honda put on an extra shift to raise production to a level five times what it is today.

But demand has plunged in both in the United States and here in Japan, where the bursting of the so-called "bubble economy" and the recent Tokyo stock market selloff has cut sharply into the segment's buyers.

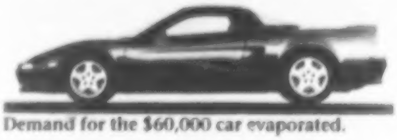
Now, product planners wonder whether the sudden and surprising remission of the $60,000 car means that Japanese marques will be unable to sustain offerings in the price range.

Besides negative economic factors, it is suspected that Japanese brand image simply hasn't evolved far enough.

Analyst Steve Usher of Kleinwort-Benson International in Tokyo figures Honda was ahead of its time. Lasting acceptance of Japanese cars at such prices may take several more years, he said.

One executive said last week that the NSX debacle is being studied by the entire industry. No one, he said, would now attempt to bring out a comparable specialty car.

"The NSX was almost 100 percent a bubble economy car," he said. "No one is sure what Honda was trying to accomplish with it. If they wanted to make an image car, they succeeded. If they wanted to make a volume car, they did not."



Demand for the $60,000 car evaporated.

Honda has progressively lowered NSX production in recent months to fewer than 10 a day. A second shift was eliminated early last fall after a few months of operation because Honda said a huge order backlog in Japan had been cleared up.

The waiting list had once stretched to 10,000 customers.

Shortly after the 1990 launch, NSX resale prices soared. A Tokyo dealer successfully bid 16.2 million yen ($122,000 at current rates) for an NSX in October 1990. The highest reported price in the United States was $105,000 at about the same time. In Japan, the NSX is priced at 8 million yen ($60,150) if it has a five-speed manual transmission and 8.6 million yen ($65,000) for an automatic.

Honda originally projected sales of 2,000 NSXs annually in Japan and exports of 4,000, including 3,000 to the United States. But U.S. sales totalled only 1,940 in 1991. For the first three months, sales fell to 363 from 518 a year earlier.

Sales in Japan were 3,851 units in 1991, but peak sales occurred in the first half of the year.

nounced plans in the past two weeks to launch new cars early next year. Mazda's all-new Amati division is two years away from its debut, and Mitsubishi is widely reported to be working on setting up an all-new upmarket division of its own.

Indeed, barring political intervention, the proportion of the total value of Japanese imports accounted for by luxury division models is likely to soar during the next five years. According to estimates, the divisions' U.S. sales are likely to rise to above 500,000 units a year late in the decade from about 225,000 units in 1990.

The activity comes against the backdrop of recent agreements to cut exports to both the United States and Europe. In March, Japan's Ministry of International Trade and Industry cut the voluntary ceiling on passenger-car exports to the United States to 1.65 million units from 2.3 million, while shipments to the European Community will be cut to 1.185 million units this year from 1.26 million units in 1991.

The reduced volumes mean that each car sold in those markets must yield more return for the producer. As a result, analysts and industry executives concur, the Japanese will concentrate on solidifying and building up the luxury marques — within the confines of political possibility.

"Theoretically, that's what they should be doing," said analyst Ben Moyer of Merrill-Lynch in Tokyo. "But there is the issue of the 'value' of the trade surplus, which is what people should be worrying about, not units."

Moyer said a likely shift in the auto-trade debate from units and raw market share to overall dollar value will drag the luxury divisions into the political fray.

"For that reason, the companies may hold off on some of the high-end products until they feel more comfortable with what the situation is," he said.

Indeed, virtually every Japanese luxury division is understood to have a new flagship model on the drawing board. But so far, they are concentrating on shoring up the middle and bottom of their franchises.

A Toyota executive said that a new Lexus flagship is not a high company priority.

The next new Lexus, Toyota's Japanese-market four-door Aristo, is due to arrive in the United States next March and will be positioned between the ES300 and the LS400.

Nissan has just launched the Infiniti J30 in the same segment where the Aristo will compete, and the next priority for its luxury division is a replacement for the Infiniti G20 at the bottom of the range.

"There are no plans to bring in a model above the Q45," said Masao Horie, Nissan's general manager for European and North American Operations. "The success of Infiniti lies on the success of the Q45."

> “There is the issue of the 'value' of the trade surplus, which is what people should be worrying about, not units.”
>
> **BEN MOYER**
> MERRILL-LYNCH

But Lexus and Infiniti product planning may hinge to a degree on how Mazda positions its Amati luxury channel when it debuts in about two years.

A 4.0-liter V-12-powered sedan is expected to top the Amati range and could prompt Lexus to respond with a new flagship, possibly with a 4.5-liter V-8 or a V-12.

Honda may move toward a new V-8-powered Acura flagship based on the Tokyo auto show's FSX concept sedan that is pitched above the current Legend. The new sedan is rumored to be an aluminum-bodied LS400-fighter with a V-8 engine and VTEC variable-valve timing. But company officials deny such plans.

"Honda's moving up has been talked about for years and years," said one analyst. "But the last time I spoke to Honda they said they were definitely not going to do it. And I don't think they will, given their r&d budget."

Keith Donaldson, who follows the industry for Salomon Brothers in Tokyo, says the makers will find it difficult to move further upscale.

"They will try to introduce a lot of cars which are near-luxury," he said. "They will have high value-added, but not actually luxury, cars. And they will ship over high value-added cars in segments they already care for."

Toshiaki Taguchi, general manager of Toyota's North America Division in Tokyo, conservatively projects sales of 100,000 units a year for Lexus by mid-decade. But the company's product plans for the division suggest a much higher target of at least 120,000 by then.

The division sold 71,206 units in the United States last year, up 12 percent from 1990.

Nissan's Horie says the company plans to sell 70,000 or 80,000 Infinitis a year by 1995 or 1996, about double last year's volume of just under 35,000.

Horie said Infiniti can't expect to approach Lexus volume levels until it beefs up its network. Plans now call for reaching 160 dealers by 1994, up from 109. At 1991 sales per outlet levels, that would put Lexus sales at over 120,000 and Infiniti at just under 60,000.

Mazda's strategy for its new Amati division is the target of much speculation. Besides the two-sedan plan announced by the company, there is talk that the RX-7 will be transformed into an Amati in two years, giving Mazda a proven sports car in the $35,000 range to help kick off the franchise.

On the other hand, some analysts think that Mazda may reconsider its Amati strategy altogether given the company's ailing earnings.

Mazda's unconsolidated pretax earnings for the fiscal year ended March 31 are expected to be off 59 percent from a year earlier, to about $152 million. Results will be announced on Friday.

"Obviously it makes sense to re-evaluate your position given the present situation they are in," said Donaldson. "I'm almost certain there would be a re-evaluation. Whether they pull out at the end of the day, I don't know."

Mazda appears to be pushing ahead. President Yoshihiro Wada said recently that while capital spending will be lower during the next two years, preparations for the premium-car range remain on course.

> “I don't think they can stop the strategy.”

> **MASAYUKI MOCHIZUKI**
> W.I. CARR

And Mazda manufacturing executives say the company's new luxury-car plant in Hofu, Japan, is scheduled to be producing five distinct models on the same line, suggesting an array of prestige products for Amati in the future.

A looming question is whether Mitsubishi Motor Co. will create a fifth Japanese luxury franchise in the United States. Fueling the speculation are strong rumors that Mitsubishi is at work on a 4.0-liter, V-8-powered Lexus-fighter that would give Diamante owners something to move into.

But Mitsubishi spokesman Junzo Ishino said, "We don't have any plans for the time being. We have about 500 dealers in the United States and we are concentrating on one channel."

Lingering questions about the profitability of the Lexus and Infiniti ventures also may be a consideration for Mitsubishi.

Rival luxury-car makers in Europe and the United States have repeatedly charged that Toyota is pricing Lexus models for market share — a refined way of accusing them of dumping.

Many analysts aren't so sure that the charge is valid, though.

"Lexus probably makes reasonable money because obviously its high-end cars are doing well," said Donaldson. "I'm sure Toyota is very happy with Lexus."

Infiniti's situation seems less encouraging.

"We do not expect any new channel to make money immediately," said Nissan's Horie.

Regardless, analysts point out, Japanese makers don't have much alternative at the moment.

"This is the only way the Japanese can survive in the world market," said Mochizuki of W.I. Carr. "They are facing trouble in the domestic market, can't really make a profit selling small, ordinary cars in Japan. I don't think they can stop the strategy."

Given the pressure and the number of new entries, however, some analysts point out that not everyone is going to do well in the segment.

"There is not enough room for everyone in the luxury market," said Neal Doying, who follows the industry for Baring Securities (Japan) in Tokyo.

"I don't know if there will be a shakeout, but some companies won't do as well as others."

American Honda shuffles field staff

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — American Honda Motor Co. has begun shuffling managers in its Honda sales regions a few weeks after shifting executives at headquarters.

James Roach replaced Bob Rivers as senior manager of the Western region, one of two Honda sales regions reporting to Tom Elliott, executive vice president. Elliott picked up direct responsibility for Honda sales after the surprising departure April 22 of James Cardiges, senior vice president.

Roach had been senior manager of auto field service for Honda Division. Together, he and Larry Finley, senior manager of the Eastern Region, now oversee the Honda Division's 10 zone managers.

Earlier this month Honda had said changes were coming in its field staff. The company confirmed last week other changes had been made at the zone level but would not disclose them. "We don't feel it's appropriate to discuss this, and even if we did, we'd want to notify our dealers first," said Bob Butorac, a Honda spokesman.

Several dealers said they expect more changes. In the meantime, they remain puzzled by the departure of Cardiges, a 14-year Honda veteran who was popular with dealers. Honda has said Cardiges left voluntarily "to pursue other business interests."

Former Western region manager Rivers becomes senior manager for market representation. He reports to Jerry Bengtson, vice president for auto marketing and distribution.

Days' supply holds steady for imports

ARLENA SAWYERS
Staff Reporter

The inventory of imported cars was 89 days on May 1, the same as the previous month, while the supply of imported light trucks slipped to 81 days from 83 on April 1.

Inventories for Japanese firms were a mixed bag. American Honda Motor Co. Inc. had an 84-day supply on May 1, down from 88 days the previous month. Nissan Motor Corp. in U.S.A. was at 93 days, down from 106 on April 1.

Mazda Motor of America Inc. had a 47-day supply compared to 55 days the previous month.

On May 1, Mercedes-Benz of North America Inc. had a 39-day supply, down from 42 on April 1. BMW had a 61-day supply, compared to 57 the previous month.

Importers with stockpiles of more than 100 days included Volkswagen of America, 145; Subaru of America Inc., 176; Mitsubishi Motor Sales of America Inc., 118; and Volvo Cars of North America, 109.

Domestic new-car stocks for the Big 3 represented a 61-day supply on May 1 compared to 62 on April 1. On May 1 last year, the Big 3 had a 70-day stock of cars.

CAW fights GM over foundry

TORONTO — The Canadian Auto Workers union is preparing to fight the planned shutdown of a General Motors foundry in St. Catharines, Ontario, with a public relations campaign.

About 2,300 jobs are at stake in the 1995 closing, which was announced in February. Production will move to foundries in Ohio and Michigan.

Workers contend St. Catharines is profitable and has lower labor costs and higher quality than rival U.S. plants. They worry the closure could affect the viability of other GM operations in the community.

Apart from rallies to raise public awareness, the CAW plans "to raise awareness within GM that to maintain its foundry operations will be a good business decision," says Gabe McNally, vice president of Local 199.

Hyundai unveils 1st diesel engine

SEOUL — Hyundai Motor Co. last week unveiled its first proprietary diesel engine, the K-1, for light commercial vehicles.

Until now, the company has relied exclusively on licensed production of Mitsubishi Motors Corp. diesel engines for its commercial vehicles.

The 4-cylinder engine displaces 3.6 liters and has a maximum output of 100 horsepower at 3,500 rpm. Hyundai says the engine delivers 17.5 mpg.

The new engine will be installed on Hyundai's line of 2.5-ton trucks, which are sold under the Mighty badge in South Korea. Planned monthly production of the K-1 is 1,200 units.

The K-1 is Hyundai's second proprietary engine.

Last year, the company unveiled a 1.5-liter, fuel-injected gasoline engine.

Stylus (1992)	$600-800
Stylus (1991, Calif.)	$800-2,000
Pickup (1990-92)	$500-1,500, based on number sold
Rodeo (1990-92)	$500-1,250, based on number sold
Trooper (1990-91)	$750
Dealer has the option of sharing rebate with buyer.	
LOTUS (1991, no expiration date)	
Elan	$5,000
Esprit Turbo	$11,000-15,000
MITSUBISHI (1991-92 models, expires July 6)	
Mirage	$500-1,000, quota
Galant	$1,000-1,500, quota
Galant VR-4	$500-3,000, based on number sold
(Galant VR-4 payments are in addition to other Galant rebates.)	
Eclipse	7% of sticker, starts with second sale
Pickup	$1,000-1,500, quota
PEUGEOT (no expiration date)	
405	$5,000
505	$6,000
PONTIAC (1992 models, expires June 4)	
LeMans	$1,000
PORSCHE (1991 models, no expiration date. To qualify for the following rebates, dealers had to buy two cars from port stock by Jan. 17.)	
911 Carrera 2, 928	$9,500
911 Carrera 4	$13,500
911 Turbo	$14,000
SUBARU (expires June 2)	
Legacy (1991)	$1,000
Legacy (1992)	
LS, LSi Sport Sedan	$500 or $1,500, depending on invoice date
All other	$1,000 or $1,500, depending on invoice date
SUZUKI (expires Aug. 3)	
Swift (1992)	$400-700
Sidekick (1992)	$700-1,500
Swift (1991)	$700-1,000
Sidekick (1991)	$500-1,000
TOYOTA (expires June 2; 1991-92 models unless otherwise noted)	
Corolla (1992)	$700-1,200, quota
Tercel	0-$500, quota
Pickups (non-base)	$400-1,000, quota
Pickups (base)	$700-1,300, quota
Camry Deluxe sedan (1992; area served by Gulf States Toyota)	
VOLKSWAGEN (no expiration date)	
Passat (1991)	$1,500
Jetta, Fox, Golf (1991)	$500
All 1990 cars	$500-1,500

SUMMIT

Japanese; Big 3 are back to the table

continued from PAGE 1

January. Then, the Japanese automakers seemed invincible. Today, they have been set back by recession at home and concessions abroad.

Then, U.S. automakers were at the bottom of a two-year recession. Today, Ford Motor Co. and General Motors are making money again. Chrysler Corp. is close.

The meeting won't attract the worldwide attention that attended the first session, which was part of a visit by Bush, the Big 3 chiefs and 18 other business leaders.

While Bush won't be there today, representatives of the U.S. Commerce Department and the Japanese Ministry of International Trade and Industry will look on.

Officials of both nations have been downplaying the session. They don't want to foster the same hopes that led to bad press and disappointment following the first meeting.

"We don't expect any startling announcements to come out of it," said one senior Bush administration trade official.

NEW PRESSURE

Additional pressure has been aimed at the Japanese by Democrats who have revived legislation aimed at reducing the $43 billion a year trade imbalance between the two nations. Three-quarters of that is in autos and auto parts.

Last Thursday, Ford Chairman Harold Poling and Chrysler Chairman Lee Iacocca endorsed a bill that would limit sales of Japanese-badged imports and transplants in the United States unless sales of U.S.-badged cars increase in Japan. GM said it continues to oppose restraints on imports.

The bill also would require a reluctant Bush administration to launch unfair trade practice cases against Japanese automakers.

"The United States can't afford to continue to be a chump to the rest of the world. We need to follow the golden rule of trade, 'Do unto others as they do unto you,' " said Rep. Dan Rostenkowski, D-Ill.

Rostenkowski, the bill's co-sponsor, addressed a congressional meeting last week.

Poling told Ford stockholders that he was reluctantly supporting the bill.

"We prefer negotiation to legislation, but given the lack of progress, we have concluded that passage of the Rostenkowski trade bill would be in the best interests of America," he said.

HIGH VS. LOW

And Poling said the chronic high imbalance of trade between the United States and Japan will be the No. 1 topic of today's meeting.

The *Nihon Keizei Shimbun* newspaper in Tokyo reported that while the United States wants regular meetings on broad industry issues, Japan prefers lower-level, working-level discussions. The differences will be discussed today.

The Japanese carmakers, initially skeptical about a second meeting, now view it as a chance to end months of mounting political pressure in the United States.

And they hope to clear the air over whether January's announcements that they would increase purchases of U.S. autos and auto parts were firm "commitments" or just "goals," a subject of controversy after the Big 3 visit to Tokyo.

"From a public relations standpoint, the Japanese CEOs should stay home," conceded the Bush administration official. They are likely to get the kind of negative press in America that the Big 3 leaders encountered in Japan, he said.

But the cost of not coming may have been even more pressure from Congress and stronger "Buy American" campaigns in the heartland.

Jack Reilly, chairman of American Isuzu Motor Inc., was skeptical about the Japanese automakers' decision to come to Chicago.

"They really didn't have a choice," Reilly said last week. "What are they going to talk about? Is GM going to say, 'Please stop selling all those cars so we can catch up?' What can the Japanese concede that will satisfy Detroit?

"I think the Japanese will be politically humiliated, and that's what the Big 3 want to do."

PROGRESS NOTED

But another Jack Reilly, the chairman of Tenneco Automotive of Lincolnshire, Ill., and head of the Auto Parts Advisory Council, will have good news to report. He will discuss results of a straw poll of association members in March that indicated an increase in Japanese interest and activity in buying U.S. auto parts.

And a survey by the Motor and Equipment Manufacturers Association, the parts industry's largest trade group, found that 80 percent of member companies reported increased business activity with Japanese carmakers since the January meetings in Tokyo, Reilly wrote in a recent letter to President Bush.

C.E. Pederson, director of the Tokyo office of the Motor and Equipment Manufacturers Association, said that in the first quarter, "We at least doubled the number of meetings with (U.S. suppliers and Japanese) car companies compared to last year. Twice as many people are coming."

While these early signs of increased interest still must be converted into sales, "the foundation that was built during the January business mission has begun to show signs of benefit," Reilly wrote Bush.

On the other hand, little has developed from several proposed import marketing tie-ups announced in January to help U.S. carmakers gain access to Japan's market.

Chrysler's Iacocca expressed disappointment with the progress on car sales in Japan.

"It's important that we be able to access the Japanese distribution system," he said Thursday. "The dialogue keeps going and things seem to be going our way a little bit. There is some movement to open the market. GM got a showroom over there this week."

Japanese auto officials say they have little new to put on the bargaining table. "There will be no gifts this time," said a Mazda Motor Corp. official. "It is too early."

Still, Japanese carmakers may hold one wild card: U.S. supplier sources suggest that the Japanese companies may be in a position to extend American parts-purchasing action plans beyond their current 1994 targets.

In January, Japanese carmakers announced separate plans amounting to a $10 billion increase in U.S. parts purchases from 1991's level to $19 billion by 1994.

They also laid out an assortment of marketing proposals that taken together provide for importing 19,700 American-made vehicles.

And privately, Japanese auto and trade officials predict the two sides will meet again before the end of the year, probably in Japan. "Our expectations are that the talks will be constructive," said Takashi Shimada, auto division deputy director of MITI. AN

Staff Reporters Kristine Stiven Breese in Los Angeles, Mary Connelly and Kathy Jackson in Detroit, and Lindsay Chappell in Nashville, Tenn., contributed to this report.

3 imports adopt new rebate plans

Mazda Motor of America Inc. is offering customer rebates of $400 to $1,500, and American Honda Motor Co. Inc. and Nissan Motor Corp. in U.S.A. have announced new dealer incentive plans.

Mazda is paying customer rebates of $1,200 to $1,400 on some 1992 cars. Based on region and model, rebates range from $550 to $1,400 on 1992 pickup trucks and from $500 to $1,500 on the Navajo sport-utility. Mazda incentives expire July 6.

Honda is paying dealers $750 on sales of 1992 Accords and $400 on 1992 four-door Civics through May 30.

Also through July 6, **Nissan** is paying dealers $700 to $1,300 on some 1992 cars and $1,000 to

Mazda fixes noisy turbo in '93 RX-7

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Mazda Motor of America Inc. had a scare several weeks ago when it discovered a noisy turbocharger on some of the first 1993 RX-7s shipped to the United States.

Bob Evans, vice president of customer support, said the impeller of the turbo was rubbing against its housing, creating friction and a slight noise.

Mazda Motor Corp. fixed the "manufacturing and assembly problem" in Japan, Evans said. The company also dispatched engineers to U.S. ports to check the few hundred cars that had already arrived in the United States.

Most of those fixes were made at the port; others were made at dealerships or regional offices.

Dealers contacted around the country say they have had no problems and no delays in getting the cars. The RX-7 is one of three redesigned cars Mazda has introduced this spring. The others are the 626 and the MX-6.

Yanase to sell Opel in Japan

MARY ANN MASKERY
Staff Reporter

TOKYO — Yanase & Co., Japan's biggest imported-car distributor, agreed last week to begin handling Opel sales in Japan next year. Yanase also sells Mercedes-Benz and General Motors products in Japan.

The deal was expected. Yanase announced last month that it will drop Volkswagen AG at the end of this year because of a disagreement over marketing policies. Opel, the German unit of GM, will be introduced into the Yanase network Jan. 1.

Volkswagen, which has been Japan's import leader for most of its 38 years with Yanase, sold 44,562 VW and Audi units last year, compared with Opel sales of 2,725. Opel sells left-hand-drive Kadett, Vectra, Omega and Senator models here. Yanase says it hopes to sell at least 10,000 Opels next year and would like to reach "the same volume as Volkswagen-Audi in a few years."

Yanase and Opel are still discussing the choice of models, prices and specific sales targets for next year. Yanase says it will negotiate the issue of how much homologation will be done in Germany and how much pre-delivery inspection will be handled by Yanase.

Until now, Opel was sold by both Isuzu Motors Ltd. and Toho Motors Co., a specialized import dealer, but the new agreement makes Yanase the sole importer

U.S. AND CANADA CAR AND TRUCK PRODUCTION

Vehicles are assembled in the United States unless noted. Vehicles are cars unless noted.

•Estimate

*1991 figures reflect Grand Wagoneer production.

†CAMI includes Geo Metro and Suzuki Swift cars and Geo Tracker and Suzuki Sidekick trucks; Diamond-Star includes Eagle Summit and Talon, Mitsubishi Eclipse and Mirage and Plymouth Laser; Mazda includes MX-6, 626 and Ford Probe.

**Estimates for Mack, Volvo-White, Kenworth, Peterbilt, Freightliner, Mercedes-Benz.

Overtime is heavy; output up

ANNE E. WRIGHT
Chief Statistician

For the second consecutive week, the Big 3 scheduled extensive overtime and reported no downtime in the United States and Canada.

Last week's overtime list comprised 18 plants — nine at Ford Motor Co., five at Chrysler Corp. and four at General Motors.

Most Canadian facilities were closed last Friday and today in observance of Victoria Day, a newly negotiated four-day holiday weekend.

Estimated U.S. car production was 136,182 last week, up 1.6 percent from the prior week and up 5.8 percent from last year.

Year-to-date, car production in the United States is 2,146,797, an increase of 3.5 percent over the same period in 1991.

Car assembly in Canada was estimated at 25,851 last week, up 24.5 percent over the prior week and up 47.0 percent over the year-ago week.

So far this year, car production in Canada is 391,937, down 3.5 percent from the 1991 period.

U.S. truck producers' estimated output was 94,863, an increase of 7.4 percent over the prior week and up 18.0 percent over the same week one year ago.

Year-to-date, U.S. truck production is 1,498,438, up 25.7 percent from the year-ago period.

Last week's estimated truck production in Canada was 21,097, down 2.2 percent from the prior week but up 30.3 percent from the year-ago week.

So far this year, Canadian truck production is 421,426, up 36.5 percent from 1991.

The estimated daily build rate of cars and trucks produced in the United States and Canada was 55,599 last week, an increase of 5.0 percent over the prior week 14.4 percent above 1991.

Chrysler scheduled overtime at the following plants last week: St. Louis; Sterling Heights, Mich.; Jefferson North (Detroit); Windsor, Ontario; and Pillette Road (Windsor, Ontario). The Windsor plants worked on the Friday holiday.

The company will run daily overtime this week at the St. Louis; Sterling Heights, Mich.; Jefferson North (Detroit); Belvidere, Ill.; Warren, Mich.; Newark, Del.; and Toledo, Ohio, plants.

GM ran overtime last week at four facilities: Oklahoma City; Van Nuys, Calif.; Moraine, Ohio; and the Suburban line at the Janesville, Wis., plant.

Ford Motor Co. scheduled daily overtime last week at the Atlanta; Chicago; and St. Thomas, Ontario, car plants. The following Ford truck plants worked overtime: Twin Cities, (St. Paul, Minn.); Lorain, Ohio; Edison, N.J.; Louisville, Ky.; and St. Louis.

Both the car and truck lines at the Kansas City, Mo., facility were scheduled for daily overtime last week. The truck line was also slated for Saturday overtime.

Dodge ships first Vipers

HIGHLAND PARK, Mich. — Chrysler Corp. last week shipped to dealers its first truckload of Dodge Viper RT/10s.

Receiving one 1992 model each were six dealerships in Southern California: Cerritos Dodge in Cerritos; Del Amo Dodge in Torrance; Glen Thomas Dodge in Long Beach; Tustin Dodge in Tustin; Valley Dodge in Van Nuys; and Carl Burger's Dodge World in LaMesa.

Chrysler said it plans to build about 200 Vipers in the next three months. Production will be expanded to about

Sport-utilities pace upturn

'92 sales up 16%; compacts lead way

JOSEPH BOHN
Truck Editor

Sport-utilities are pacing the recovery in the auto market and are providing a bonanza for the Big 3 and their dealers.

Sales of sport-utilities increased 15.9 percent during the first four months of 1992. That compares to an 11.7 percent gain for light trucks generally and a 5.1 percent gain for cars and trucks combined.

The four-month total for sport-utilities was 321,559, up from 277,386 in 1991.

Compacts, accounting for 86.1 percent of sport-utility sales, are the driving force in the surge.

- At Koons Ford in Falls Church, Va., the Explorer has become the best-selling truck after helping pull the dealership through a rough recession, according to Danny Gale, truck sales manager.
- At Precision Jeep-Eagle in Detroit, the Cherokee accounts for nearly half the dealership's sales. The Cherokee has helped sustain the store's "momentum and morale," said Dave Livermore, truck sales manager.

Chrysler Corp.'s re-pricing of the Cherokee through a combination of $2,250 in rebates and incentives helped expand the lower end of the market, while Ford's Explorer continues to pace the upper end.

Cherokee's success, which caught Chrysler officials by surprise, is leading them to continue two-shift operations at the Toledo, Ohio, assembly plant indefinitely, according to Chris Hosford, com-

Future shock — 1994 Oldsmobile Toronado

Oldsmobile will give the Toronado a new aerodynamic shape and two extra doors when the car is reborn for the 1994 model year. This shot shows a heavily disguised prototype with a sharply sloping hood and steeply raked windshield. The current two-door Toronado dies at the end of this model year.

One-price wins disciples

No-haggle selling spreading rapidly

LINDSAY CHAPPELL
Staff Reporter

One-price, no-haggle retailing is emerging as a small but explosive trend.

At least 40 U.S. dealerships have converted to the radical practice — up from 10 as recently as February. One estimate puts the number at 100. And the potential looms much greater.

"I've had almost 200 visits from other dealers wanting information," says George Fischell, general manager of the no-haggling Swanson Chrysler-Plymouth in St. Petersburg, Fla. "This thing's spreading faster than anyone realizes."

Why the conversions? Years of factory rebates and incentives have left customers in a fog. The one-price approach cuts through the clutter. Some advocates praise the practice for bringing truth to showrooms plagued by sin and deception. At the very least, it's an attention getter. In a lousy market, dealers want something to attract shoppers.

Ford hikes markup for parts under warranty

KATHY JACKSON
Staff Reporter

General Motors and Chrysler Corp. dealers hope they will receive an increase in the amount the factory pays for parts replaced under warranty based on action taken by Ford Motor Co.

Last week, Ford agreed to pay a 35 percent markup for parts replaced under warranty on 1993 models and 40 percent for parts replaced on 1994 models. All models older than 1993 will be paid at the current 30 percent level. The program goes into effect June 15.

Chrysler, GM and most importers pay a 30 percent markup, and the warranty parts markup topic will be a key issue when the Dodge Dealer Council meets June 3 in Detroit.

"I think it will enhance our position. We have a base for it now," said Frank Galeana, chairman of the Dodge Dealer Council. Galeana, owner of four dealerships including Van Dyke Dodge in Warren, Mich., is disappointed that

McNamara forfeits assets

Long Island dealer John McNamara will forfeit more than $400 million in assets to satisfy his debts. McNamara still faces criminal charges. See stories on Pages 4, 8.

Tough-guy Lopez takes charge of GM's purchasing

PHIL FRAME
Staff Reporter

U.S. auto suppliers got a new book of rules as well as a new executive to deal with when General Motors named J. Ignacio "Inaki" Lopez de Arriortua vice president of worldwide purchasing.

Suppliers who think their GM business is safe simply because of a long and friendly relationship are in for a shock, suggest people who know Lopez de Arriortua.

Lopez de Arriortua

"He is known for demanding the best from his suppliers and settles for nothing short of the best,'' said Walter Kunerth, chairman of Siemens Automotive Group, the U.S.-based arm of Germany-based Siemens Automotive L.P.

Low costs, high quality and productivity are the only things that will keep suppliers in good standing with Lopez de Arriortua, say people who know him.

Spanish-born Lopez de Arriortua, 51, joined GM in 1980 as manager of industrial engineering for General Motors Espana S.A.

Before that, he worked for units of Westinghouse Electric Corp. and Firestone Tire & Rubber Co. in Spain.

Lopez de Arriortua went from GM Espana to Adam Opel AG, the GM subsidiary in Russelsheim, Germany, and later became head of GM's central purchasing operation in Europe.

He was vice president in charge of European supply for GM Europe when his new job was announced April 24.

Although Lopez de Arriortua is relatively unknown in this country, he has a well-established reputation in Europe.

The nicknames Lopez de Arriortua has earned during his 12-year GM career tell all:

- "Lopez the Terrible."
- "Hurricane Lopez."
- "The Spaniard who makes the Germans tremble."
- "The pope of productivity."
- "Chief-general of the battle against the Japanese."

"His reputation as a tough bargainer does precede him, and it is

3,000 units for the 1993 model year.

A single 1992 Viper has been allocated to each of about 200 Dodge dealers in the top 40 markets for premium-priced sports cars.

GM restructures personnel staffs

DETROIT — General Motors has restructured its human-resources functions and has reassigned two vice presidents.

Gerald Knechtel, 50, was appointed vice president of personnel for North American Operations. He will report to GM President Jack Smith.

Richard O'Brien, 49, was appointed vice president of corporate personnel. He continues to report to Executive Vice President Alan Smith.

The new alignment replaces the personnel administration and development staff headed by Knechtel and the industrial relations staff headed by O'Brien. It also takes over the the personnel functions of the groups in NAO.

First Saturns cross the Pacific

NASHVILLE, Tenn. — Saturn Corp. made its first deliveries outside North America as a freighter with 469 cars arrived in Taiwan last week. They go on sale June 1, a spokesman said.

About 420 were sedans and the rest were coupes. The company plans to ship about 400 cars a month to Taiwan,

Saturn already sells in Canada. Plans also call for exporting a right-hand-drive version to Japan, though no timetable has been set.

— Lindsay Chappell

Caprice stays — for a while

NEW YORK — David Hansen, Chevrolet's chief engineer, told the International Motor Press Association that the division will keep the six-passenger, rear-drive Chevrolet Caprice for "the foreseeable future."

But he added that Chevy's future focus will be on "more efficient and more affordable cars."

The press had previously suggested Caprice is a B-car platform variation that General Motors may ax.

Health care put at $1,086 a car

WASHINGTON — Health care costs account for $1,086 of the price of each Big 3 vehicle made in North America, Walter Maher, Chrysler Corp. director of federal relations, told a Senate Finance subcommittee last week.

He cited a study by the University of Michigan. The $1,086 is about $500 higher than foreign automakers' costs, Maher said.

He said that puts an unfair burden on U.S. businesses competing with companies in countries that have national health care plans.

Sen. Donald Riegle, D-Mich., chairman of the committee, said a national health care program must be put in place to curb manufacturers' costs and maintain high-paying jobs.

TOKYO — Nissan Motor Co. Ltd. has built a single-seater solar car, the Sun Favor, to study the application of solar power in vehicle design.

The company intends to enter the car in three solar-car races and rallies later this year in Japan.

Power is provided by single-crystal silicon solar cells.

Navistar losses hit $67 million

CHICAGO — Navistar International Corp.'s losses increased to $35 million in its second fiscal 1992 quarter ending April 30, up from $29 million a year ago.

The company reported a net loss of $67 million on revenues of $1.82 billion for the first six months of fiscal 1992, compared with a loss of $67 million on sales of $1.78 billion a year earlier.

Isuzu preparing emissions recall

DETROIT — A recall is pending for 1988 model year Isuzu I-Marks and Chevrolet Spectrums with 1.5-liter engines that exceed emission standards.

American Isuzu Motors Inc. spokeswoman Susan Cain said the automaker has agreed to recall about 7,000 I-Marks with manual transmissions due to excessive carbon monoxide emissions. But Isuzu is still negotiating with the EPA over recalling vehicles equipped with automatic transmissions.

Cain did not have information on how many Isuzu-built

briefly

GM leaves sink behind this trip

General Motors returned to Moscow last week to exhibit six Cadillacs and Chevrolets at a trade fair. In 1959 the General was at that same show, displaying a modern kitchen with Frigidaire equipment. That time, Nikita Kruschev and then-Vice President Richard Nixon argued about which country was better, in what became known as the Kitchen Debate. This time, maybe Boris Yeltsin told everyone of the dangers of drunk driving.

PENNY PINCHING — An upcoming article in *Financial World* on **Ford Motor Co.'s** cost-cutting shows no stones were left unturned to get the company lean and mean. Lloyd Hansen, assistant controller of North American Operations, said "we had to be unmerciful about every cost element." An example: six of every seven fluorescent lights in headquarters hallways are turned off.

GREEN SUBMARINE — Larry Oswald, program manager for hybrid vehicles for **GM's** Advanced Engineering Staff, insists electric vehicles meet current safety standards. Oswald was asked about the safety of operating a GM electric vehicle in the rain. "It's built like a submarine," he joked. "Of course, we were thinking about using a robot to drive them through the salt-corrosion bath at the proving ground."

WASTE NOT, WANT NOT — The cost-cutting philosophy of the new **GM** has been embraced with a vengeance by some public relations practitioners. They are still printing news releases on letterheads that read **Chevrolet-Pontiac**-Canada Group, **Buick-Oldsmobile-Cadillac** Group and Truck & Bus Group. Those groups got the ax in the latest reorganization. For the record, **Ford** no longer uses **Mercury-Edsel-Lincoln** Division letterheads.

HOW SWEET IT IS — Ron Boltz, **Chrysler Corp.** vice president of product strategy and regulatory affairs, said winning a national EPA award for pollution prevention at Chrysler's new Jefferson North assembly plant was just the "icing on the cake, not the cake." He said, "But yes, it feels good. The EPA has never awarded anything to the auto industry. That's despite the real progress made on cleaning up vehicles."

HE'S BACK — Michael Moore, of *Roger & Me* fame, is working on a sequel. Once again, Moore focuses on how **GM's** corporate contractions are affecting the former GM boomtown of Flint, Mich. The new film, due out in the fall, will be broadcast along with the original.

Duntov: bulldozing

CORVETTE DIGGINGS — The people who are breaking ground June 5 for the National Corvette Museum in Bowling Green, Ky., are going all out to make the event a Corvette happening. No silver shovel would do for this groundbreaking, so museum President Dan Gale is arranging for a bulldozer camouflaged as a 1992 Corvette to do the honors. The driver of the Corvette bulldozer will be Zora Arkus-Duntov, the retired Corvette chief engineer. The event will be part of a National Corvette Homecoming Weekend. It's homecoming because the Corvette plant is in Bowling Green.

Heads to roll in GMAC mess

PHIL FRAME
Staff Reporter

FORT WAYNE, Ind. — General Motors plans disciplinary action against General Motors Acceptance Corp. employees who failed to discover the alleged fraudulent activities of dealer John McNamara, Chairman Robert Stempel said.

An internal investigation into McNamara's alleged $436 million fraud has shown "no involvement in any wrongdoing on the part of the GMAC people," Stempel told the 1,523 stockholders assembled here for GM's 84th annual meeting.

But there will be accountability for employees who failed to discover the activity, Stempel said. "We will not rest until we finally take appropriate disciplinary action," he said.

The McNamara episode was of primary concern to stockholders at the meeting last Friday. Some shareholders clearly wanted heads to roll — not just responsible GMAC employees, but also at the company's firm of auditors, Deloitte & Touche.

Stockholder questioning was so intense that GM board member Marvin Goldberger, chairman of the audit committee, plus Deloitte's top executives and GM Chief Counsel Harry Pearce were called on to explain.

"Let me assure you the internal investigation that was conducted by our legal staff has been comprehensive, exhaustive, accurate and, most importantly, independent," Pearce said. "The results have been presented to the GMAC audit committee, the GMAC board, the General Motors audit committee and the General Motors board. I have absolutely no doubt that all appropriate action will be taken. We don't for a moment suggest to you that there were not substantial mistakes made."

Goldberger said the audit committee has discussed the 170-page report and soon will make its recommendations to the board.

Stempel responded contritely to stockholder concerns about the McNamara affair. "I'm not going to sit here today and give you an answer on GMAC that I know none of you will accept," he said. "The fact of the matter is, it happened. We are embarrassed, but I assure you it will not happen again. We are taking very strong corrective actions to make sure of that."

In his report to shareholders, Stempel:

- Clarified that GM will use one platform each to build small front-wheel-drive cars, mid-sized fwd cars, large fwd cars and large rear-wheel-drive cars. That will be in addition to specialty cars such as Corvette and Saturn, and separate from Cadillacs.
- Said GM will use 100 percent of its capacity before the retrenchment announced last December is completed in 1995.
- Asserted that the board expects him, not Executive Committee Chairman John Smale, to run GM.
- Confirmed that the Buick-Oldsmobile-Cadillac and Chevrolet-Pontiac-Canada groups are dead, replaced by North American Operations, which was created in an April reorganization. ■

Stock nets $2.1 billion

DETROIT — General Motors received a $2.1 billion shot of funding for capital projects last week as its new offering of 55 million shares of common stock went on sale.

Eight brokerage houses are underwriting the offering, the largest ever by an American company. The underwriters bought the stock from GM and began selling it to individuals and investor groups last Wednesday.

GM is paying $53.6 million, or $0.975 per share, in underwriting fees for the offering.

The per-share price of the stock was set at $39 before Wednesday's opening of the New York Stock Exchange, 25 cents below the previous day's closing price of GM common.

The stock sale was going relatively well. The price was holding firm at $39, and more than 17 million shares were sold the first two days.

FRANKFURT — New passenger-car sales in Europe eked out a 2 percent gain last month despite continuing weakness in Germany. It cemented a pattern in which recoveries in several smaller countries have begun to offset declines in Europe's biggest market.

According to *Automotive News* estimates, sales in the 17-nation market rose to 1.3 million units in April from 1.28 million a year earlier. An 11.2 percent slide in Germany — the fourth consecutive month of decline — was offset by strong gains in Italy, Spain and the United Kingdom.

European sales through April rose 1.5 percent to 5.1 million.

"April represents a turning point for the German market. There is reason to believe the market will drop 11 percent this year to 3.7 million, and another 6 percent in 1993," said Arthur Maher, an analyst for DRI/Europe in London.

"The real potential for the rest of the year is in the United Kingdom and Italy," Maher said.

He said the European makers will face new competition from Japanese makers later this year when Nissan's Micra, Toyota's Carina and Honda's as-yet-unnamed medium-sized car go into production in Britain.

Meanwhile, French makers Renault Group SA and Peugeot Group SA showed the largest sales gains among Europe's six biggest manufacturers in the first four months.

Renault, largely because of a backlog caused by last year's fourth-quarter strike, sold 9.4 percent more cars in the period, yielding a 10.7 percent share of market. The company, which is not expected to maintain the rate of increase for the next three quarters, was up 5.5 percent in April.

Peugeot sales, riding on the French economy's rise, rose 6.1 percent for the first four months to 605,300 units. April sales were up only 0.3 percent, however.

Volkswagen AG hit a record 17.9 percent market share in April as production of the new Golf/Vento increased. Volkswagen, unlike other German makers, is not expected to lose share this year because demand for the new Golf family is still growing and new capacity is coming on stream.

Volkswagen did particularly well in the United Kingdom last month, boosting sales there nearly 24 percent, and in Italy, where it continued its assault on Fiat Auto S.p.A. VW sales there surged 58 percent in April while its market share rose 3 points to 14 percent.

General Motors maintained its No. 3 position in April, as share rose to 12.5 percent. Sales in the United Kingdom rose 29 percent from a year earlier, but sales in Germany fell 21 percent.

Ford sales were down 6.5 percent in April to 140,700 vehicles. Ford maintained its market share in the United Kingdom but suffered in Germany with a 12 percent decrease in sales. European market share fell to 10.7 percent from 13 percent a year earlier. ■

British sales post first increase in 29 months

ED WENDT
Staff Correspondent

LONDON — New-car sales in Britain rose in April for the first time in 29 months, providing a small ray of hope to the nation's beleaguered carmakers and dealers. For the first four months of the year, however, sales were down from a weak period a year earlier.

Industry officials are hoping that sales will be boosted by the April 11 re-election of the Conservative government and the reduction of the new-car tax to 5 percent from 10 percent. But many analysts fear that a recovery is nowhere near.

According to industry figures, new-car sales last month rose 9.1 percent from a year earlier to 138,100 units. But for the first four months of the year, sales are off 6.7 percent from a year earlier to 544,300 units.

"The April rise in no way signals a trend," said Neil Marshall, chief economist for the Retail Motor Industry Federation. "But it is a positive sign."

Marshall said the real measure of the market will come in August, when new license plates go on sale and which is traditionally the industry's best month.

Ford Motor Co. maintained its market leadership in April with sales of 32,488 units, for a 23.5 percent share. General Motors' Vauxhall Motors Ltd. unit registered 24,816 units, for an 18 percent share. ■

Mitsubishi rolls out new Libero wagon

MARY ANN MASKERY
Staff Reporter

TOKYO — Mitsubishi Motors Corp. last week introduced the all-new Libero station wagon to replace the wagon version of the venerable Lancer/Mirage in the Japanese market. The new Libero also will be the base of an electric car under development for a 1993 launch.

The new front-wheel-drive wagon is 168 inches long, 66.5 inches wide, 57.8 inches high and rides on a 98.4-inch wheelbase. A four-wheel-drive model has slightly larger dimensions and a cargo version has a larger tailgate opening.

Engines are a 1.8-liter, single overhead cam, 16-valve gasoline engine and a new 2.0-liter turbo diesel.

Mitsubishi plans to sell 2,000 units a month in Japan at a price range of 764,000 yen to 1.99 million yen (about $5,875 to $15,370).

For export, Mitsubishi will continue to build the older Lancer wagon in limited numbers.

Mitsubishi also said the Libero will be the base for an all-new electric vehicle set to debut in mid-1993.

The electric will have a range of 125 miles per charge and a maximum speed of 68 mph, Mitsubishi said.

The vehicle will be available with either lead-acid or nickel cadmium batteries, and will incorporate a charge meter, much like a traditional gasoline gauge, to display the amount of electricity remaining.

An on-board charger can recharge the battery in eight hours, Mitsubishi said, while an off-board system will recharge the car in only one to two hours.

The vehicle is part of a cooperative project with Tokyo Electric Power Co. The companies expect to build 20 or 30 units.

Mitsubishi said it has no plans to export the electric vehicle to California. ■

Mitsubishi will use the new Libero station wagon as the platform for an electric-powered vehicle expected to be launched sometime in 1993.

trucks

Indicators reveal Class 4-8 revival

JOSEPH BOHN
Truck Editor

All indicators point to a big revival in the heavy-truck market.

The rate for net new Class 8 orders climbed to 14,900 in April from 9,530 in April 1991, according to a preliminary report by Rothschild Inc., a New York investment firm.

Net new orders started with 10,550 in January, climbed to 11,822 in February and 12,437 in March. They reached their highest level in 15 months during April, according to Rothschild.

April orders were at a seasonally adjusted rate of about 190,000 units, the investment firm said.

At the same time, the cancellation rate on previous orders continued at the relatively low level of less than 10 percent during April.

Production rates are rising and expected to increase sharply by the second half of the year. That's to rebuild dealer inventories as well as to respond to increased demand, according to Frank Prezelski, an analyst with Rothschild.

If the order pattern continues, even though the rate of gain slows, U.S. retail sales of heavy trucks in 1991 should reach 110,000 to 120,000, Rothschild said. That would be up 11.0 to 21.0 percent from 1991 levels.

North American factory sales are expected to exceed 120,000 units this year.

Calendar 1993 should see North American factory sales exceed 160,000 units, exclusive of any prebuying caused by increased costs of 1994 model diesel engines.

Costs of the engines are expected to increase due to tighter emissions standards and the possibility of mandated anti-lock braking systems.

Class 8 sales totaled 10,864 in April, up 38.3 percent from a year ago, according to *Automotive News* and the Motor Vehicle Manufacturers Association.

Class 8 sales of 33,709 for the first four months of 1992 exceeded the same period of last year by 5.3 percent.

The medium-duty market is also recovering, though at a slower rate than Class 8.

Class 4-7 sales in April of 12,086 were just slightly below 12,192 during the same period last year. Four-month medium-duty sales of 42,967 were just ahead of 42,560 last year. AN

Dealership parts certification in works

DETROIT — The heavy-truck industry is trying to improve the professionalism of dealership parts personnel.

Industry groups and heavy-truck manufacturers have hired the National Institute of Automotive Service Excellence to develop a parts personnel certification program.

Ronald Weiner, president of the institute, called the program a natural follow to its truck technician testing and certification program, which he said has gone over very well.

The new dealership certification program is supported by the American Truck Dealers Division of the National Automobile Dealers Association, the Motor Vehicle Manufacturers Association and heavy-truck manufacturers.

The certification process includes a test covering product knowledge, communications and sales skills.

It will improve the marketing of truck parts and service, and ultimately benefit consumers as well as truck dealerships, according to Thomas Hanna, MVMA president.

The National Institute of Automotive Service Excellence plans to have the truck parts personnel test available at 500 testing centers in November, Weiner said. AN

in brief

TRUCKS

Navistar to launch smokeless diesel

CHICAGO — Navistar International Transportation Corp. in September will begin offering its "smokeless diesel" engine that meets 1994 emissions regulations.

The DTA 466, a 7.6-liter six-cylinder diesel rated at 210 horsepower and 646 pounds-feet of torque, will be available in selected 3000-series school buses and 4000-series medium-duty 1993 trucks, according to Dan Ustian, vice president and general manager of the Engine Division.

The engine uses a high-pressure mechanical fuel injection system and runs on low sulphur fuel, which will be required in all 50 states by October 1993.

Ford to upgrade Aeromax model

SAN FRANCISCO — Ford Motor Co. is planning a special, limited-edition version of its Aeromax Class 8 truck. It will be called the Hard Runner.

Ford showed the upscale, image-builder model at a dealer meeting. The Hard Runner will be offered this fall, featuring leather seats, upgraded stereo and other eye-catching equipment.

John Merrifield, Ford heavy-truck sales manager, said only a few hundred units of the special model are planned.

Idealease slates safety seminars

BARRINGTON, Ill. — Idealease Inc., a major truck leasing and rental firm, and Harco National Insurance Co. of Rolling Meadows, Ill., are conducting safety and compliance seminars in various cities through August.

Idealease, with more than 15,000 vehicles in service and 300 locations in North America, recently added Altruck Leasing Systems in Cambridge, Ontario.

Big truck show set for July 23

ANAHEIM, Calif. — The 31st annual International Trucking Show will be held July 23-25.

This year's event will have more seminars and special features, according to Gary Sherrard, show president, and Joel Anderson, executive vice president of the sponsoring California Trucking Associations.

Sport-utilities pace 1992 sales upturn

continued from PAGE 1

pany spokesman. Chrysler had planned to reduce Cherokee output to one shift at the beginning of the 1993 model year.

Chrysler expects to sell 130,000 Cherokees in the 1992 model year, more than twice as many as originally forecast, according to Bernard Robertson, general manager of Jeep and truck engineering.

It projects 100,000 Cherokee sales in the 1993 model year, even with acceleration of the new Grand Cherokee. The latter is expected to generate another 170,000 sales.

To ensure Cherokee's continued success, Chrysler notified dealers it will reduce the price of the base 1993 two-door, two-wheel-drive model to "around $13,000" from the current $14,831 (including $485 in destination charges).

Chrysler also will revise its Cherokee Sport, Laredo and Limited series into base, mid-line and high-line Country models. The mid-line model has not been packaged or named yet. The high-line Country will run around $20,000.

The Grand Cherokee prices range from $19,000 to $27,000.

Chrysler sold 2,417 Grand Cherokees in March and 4,877 in April. The total is "somewhat ahead" of plan, according to Robertson.

He said the company's goal was never to outsell Ford's Explorer, but simply to "sell out" the straight-time, 170,000-unit capacity at the Jefferson North plant in Detroit.

"If we get 25 percent of the sport-utility market, we'll be happy," Robertson said. Jeep had 23 percent in the first four months of 1992.

Ford's Explorer has demonstrated the potential of the segment. Ford sold 250,059 Explorers in calendar 1991, and Explorer sales ran 26.5 percent ahead of that pace during the first four months of this year with 97,056 deliveries.

The Explorer accounted for 34.2 percent of compact sport-utility sales during the first four months. And it helped domestic manufacturers increase their share of the segment.

Domestic makers grabbed 81.9 percent of the compact sport-utility segment during the four-month period, compared with 77.0 percent a year ago.

Sport-utilities are important profit sources for dealers and factories alike.

Koons Ford's Gale says the dealership grosses $1,400 per Explorer.

John Casesa, an analyst with Wertheim Schroder & Co. in New York, estimates Ford and Chrysler earn $6,000 on every luxury sport-utility.

The median transaction price for a compact sport-utility in 1991 was $19,200, according to a study conducted for Ford Motor Co.

The Explorer's median selling price was higher than $20,000; the Chevrolet Tracker's was $11,800. Toyota's Land Cruiser topped the list at $26,300, according to an outside study done for Ford Motor Co.

Because of their diverse prices and appeal, sport-utilities attract buyers ranging from outdoor enthusiasts to yuppies and retirees.

Some 55 percent of their buyers come out of the car market; 17 percent are previous sport-utility owners; and 13 percent are former pickup truck owners, according to the research conducted for Ford.

Only 5 percent are former van owners, and another 5 percent are previous owners of full-sized sport-utilities. Thus, there's little competition with those segments. The other 5 percent either didn't specify or had never bought a vehicle before.

Demographically, buyers have a median age of 38.5 and median income of $55,500, according to Joel Pitcoff, Ford manager of research and analysis.

Some 66 percent of drivers are male; 74 percent are married; and about half are college graduates.

Small sport-utilities, like the Geo Tracker, are popular with younger buyers and female drivers, according to Kurt Ritter, Chevrolet truck marketing manager.

Ritter added that the increased availability of domestic four-door models, beginning in the 1990 calendar year, really put the market into high gear.

The four-door models account for 80 percent of the compact sport-utility market, Ritter said.

Chevrolet has been adjusting its mix toward that industry trend, he added. Chevrolet's S-Blazer sales jumped 36.0 percent in late April after it adopted a $1,500 rebate to counter competitors' pricing actions, Ritter said.

Chevrolet has no current plans to offer a price-leader version of the S-Blazer, but it is keeping its options open as it studies the market, Ritter said.

Engineering Editor Jack Keebler contributed to this report.

ONE-PRICE

System appeals to buyers, dealers

continued from PAGE 1

Agoura Hills, Calif., is studying the trend. The research and consulting firm reports that many of the 40 to 45 dealers it has identified now want to push the idea onto second and third franchises.

"This has a chance," says Power account director Doris Ehlers. "Dealers like it, and it will continue growing."

One-price stores still represent less than one-half of 1 percent of the nation's 23,000 new-car dealerships. And there are pitfalls. Dealers can create more ill will than ever if they make a haggle-free sale, then snare the customer in a trade-in deal or lopsided finance and insurance plan.

"I don't think it's going to be viable in the long run," predicts Dave Towell of Akron Nissan-Cadillac in Akron, Ohio, who sells his cars the traditional way.

"I think we all agree that the single biggest negative in buying a car is haggling," Towell says. "Unfortunately, we're in a business that has negotiable price points. As long as people want to trade in old cars, add and subtract options, we'll keep negotiating."

ONE-PRICE CONFERENCE

Still, the converts are growing. Last week, J.D. Power brought 18 no-haggle dealers together in Washington for what the firm called "a networking discussion to find out what's happening."

And in related efforts, automakers are exploring ways to simplify sales. Saturn Corp.'s 162 stores already espouse no-haggle selling as part of the company's general policy. Ford Motor Co. has also experimented with one-price selling on its Escort line.

Owners of the no-dicker stores insist it is more than the latest gimmick.

"We car dealers are out of step with the consumer," declares Earl Stewart, a second-generation Pontiac dealer in West Palm Beach, Fla., who made the change six months ago. "No other products are sold the way cars are. It's all changing. Consumers don't like buying the way we've traditionally sold."

Enthusiastic dealers report that the change to one-price retailing has spurred new sales, improved customer satisfaction ratings, reduced sales-force turnover and bolstered profit margins.

Stewart watched sales at his 55-year-old dealership dwindle from 130 new cars a month to 30 a month before he switched over last November. The dealership is now selling 100 a month, all at firm prices. March and April were the first profitable months since 1989.

On the other side of the state, in St. Petersburg, Swanson Chrysler-Plymouth reports a 300 percent gain in monthly sales over last year since starting a one-price system in January.

In Grand Forks, N.D., Chevrolet dealer Wes Rydell reports a 30 percent sales increase since adopting the idea last year. He has introduced it in three other of his eight Midwest stores.

In Beaverton, Ore., where Ford dealer Randy Francis helped pioneer the concept 20 years ago, Damerow Ford is retailing more than 3,500 vehicles a year without any price negotiation.

"Dealers have been calling me from all over the country," Francis says. "What we're seeing is a move toward price integrity. People have been confused about prices. They don't believe us anymore. They want to know the real value of what they're buying."

A cottage industry has also sprung to life for training classes and consulting on the practice.

For $3,000, you can spend two days at Jim Barkley Toyota in Asheville, N.C., watching no-haggle sales, perusing financial records and obtaining advice. Houston Chevrolet dealer Bob Marco offers an eight-hour seminar for $1,500.

The trend is showing up in different guises, especially beyond the car sale itself. Some stores say they still haven't figured how to — or whether to — put their finance and insurance profit centers onto a no-haggle system. Similar questions apply to used cars and trade-ins.

A few dealers have included their used-car operations so far.

"The common thinking is that you can't sell used cars without negotiating," says Rydell. "We find that putting firm prices on our used cars is a very effective sales tool."

> ‘We car dealers are out of step with the consumer. They don't like buying the way we've traditionally sold.’
>
> **EARL STEWART**
> FLORIDA PONTIAC DEALER

Aggressive haggling on trade-ins can undermine the new customer trust, proponents warn. Stewart resolved the question by sending all trade-ins to auction.

He assures customers that if the auction price turns out to be more than his trade-in allowance, he'll refund the difference. He gives customers a certified bill of sale from the auction, and has refunded as much as $900 on under-appraisals.

"You've got to be totally credible with the customer if this thing's going to work," he reasons.

Some dealers have added controversy to the trend by slashing their sales staffs to the bone. Jim Barkley Toyota made the switch to nonnegotiable prices last month and cut its sales staff from 13 to three. Those three are selling about 70 vehicles a month — about 10 percent more than the 13 did.

A smaller sales staff enables Barkley to put its own $15,997 sales sticker on a Camry LE that lists for $18,136.

Stewart's plan to convert his Pontiac dealership caused panic throughout the store. Fear of sales staff layoffs and skepticism about the general concept led to grumbling and some resignations. They included the general sales manager, whom Stewart talked into coming back.

Stewart ended up hiring additional sales personnel to run the store — but with a twist. He specified that each new salesman would have no previous automotive sales experience. And each would be trained in the new philosophy.

NADA IS CRITICAL

That issue is bringing criticism from some industry corners, including the National Automobile Dealers Association. Tom Webb, senior industry analyst, says eliminating sales staffs "doesn't bode well for the industry."

Adds NADA spokesman Ted Orme, "There's a need for changes in industry sales tactics out there, but firing salesmen is not the way to improve sales practices."

Ironically, the trend is gaining momentum just as NADA is launching its own effort to improve sales tactics. Its new sales- certification program, which started in April, seeks to instill more professionalism in sales personnel. So far, about 1,400 people have ordered the NADA courses.

On the manufacturer end, Ford tiptoed into the no-haggle waters last September with fixed prices on Escort LX models in test markets. Last week, the carmaker took the plan nationwide.

The Ford program differs from the dealer plans because it only covers one specific model. It's also intended to reduce the confusion that surfaces when a single car line carries many different list prices.

Lee Miskowski, general manager of the Lincoln-Mercury Division, thinks that dickering will still have its place.

"The reason that negotiating will never go away is because of the nature of the business," Miskowski says. "For every focus group where you find people who can't stand haggling, you'll find two or three who want it."

But proponents make their case with a passion.

"Customers don't like the game of being manipulated," says Robert Kamm, general manager of Valley Mazda-Hyundai in San Luis Obispo, Calif., which made the switch last year.

"The negotiating process in this economic climate is becoming a blood bath. Salesmen go back and forth to managers over prices. It's laborious to the point of making the participants hate each other. What's the value of that? How does that help us or the customer?

"This isn't about price cutting," Kamm says. "It's about an ethical awakening, and it's going on in businesses all over the country. My belief is that if we can transform this from a business of deception and pressure to one of genuine service, we'll have demonstrated something to the business world."

All 1990 cars	$500-1,500
VOLVO (1992 models; expires May 31)	
240-GL, 940-GL	$1,000

Porsche prepares lease program

WILLIAM R. DIEM
Assistant Managing Editor

Porsche Cars North America will roll out a national lease promotion soon after Porsche Credit Corp. begins operating in early June and back the campaign with national and regional newspaper advertising.

"You're going to see some monthly lease figures in the advertising," said Porsche spokesman Ed Triolo.

"It's going to motivate some people to take a good look."

Porsche sales fell 52 percent last year; through April this year they dropped 3.8 percent.

Porsche will advertise the lease program in the *Wall Street Journal* and in dominant regional newspapers.

Triolo said some dealers in areas such as Chicago, where sales are very seasonal, are upset because the program was not ready earlier in the year.

In January, Porsche officials said Porsche Credit Corp. would start operating in April.

But in March, Porsche AG of Germany replaced Brian Bowler, who had been president of Porsche Cars North America, with Frederick Schwab.

Schwab was senior executive vice president of the marketing company and he also was president of the nascent captive finance company.

Porsche immediately replaced Schwab at the finance company with Ross Dupper, who retains his post as vice president for finance at Porsche Cars North America. But all the changes at the top delayed the startup of the captive finance company.

Porsche Credit is designed to support dealers with retail sales and leases of new and used Porsches.

"Used cars are very important to some of our dealers," said Triolo.

In addition to the national lease program, the company will offer a variety of individual retail products, like balloon financing, but it does not plan to offer floorplanning support.

Porsche has a lot of customers who signed five-year leases on 944s in the mid-1980s.

The company hopes the new 968, RS America 911 and leasing support are the right kinds of products to retain those customers for a few more years.

"We're right now in the middle of the sign-up phase with dealers, conducting briefings around the country," said Triolo.

"In all of our conversations with dealers and the dealer council, this has been a prime focal point. The dealers are looking forward to it." AN

'93 Escort, Tracer debut with rebates

ARLENA SAWYERS
Staff Reporter

Ford Motor Co.'s 1993 Ford Escort and Mercury Tracer rolled into dealerships with consumer rebates as part of their one-price structure.

The rebate on standard and LX Escorts is $400 on models with manual transmission and $200 with automatic transmission. The rebate on Tracer four-door sedans and wagons is $200. The incentives expire June 30. With the rebate, one-price Escort LX models may be advertised at $10,499 with manual transmission, and Tracers may be advertised at $10,999.

Also, rebates on 1991 and 1992 Escort and Tracer models were revised. The rebates now range from $400 to $1,000 depending on region and model. The previous rebates ranged from $500 to $1,000.

Ford also has brought back its $1,000 rebate on 1992 Ford Crown Victorias to owners of Ford Motor Co. products. It is in addition to the standard $500 rebate. It runs through September.

Buick is offering dealers $1,500 on sales of 1992 Regals. Customers can finance 1992 Regals and Skylarks for 3.9 percent for 48 months. The program started May 20 and expires Aug. 12. AN

Special Correspondent Charles E. Ramirez contributed to this report.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS	
FORD MOTOR CO. (1993 models, expires June 20. In lieu of rebates, 7.9 percent financing is available.)	
Ford Escort	$200-400
Mercury Tracer	$200
CONTINUING PROGRAMS	
CHRYSLER CORP.	
Expires June 30. Finance rates in lieu of rebates are 0 to 9.9 percent.	
1991-92 models	
Chrysler Imperial, New Yorker Fifth Avenue	$1,500

Protege, MX-6	$1,400
626	$1,200
Navajo	$500-1,500
Pickups	$500-1,400
Navajo and pickup rebates vary by model and region.	
SUBARU (expires June 2)	
Loyale (1991-92, fwd sedan, awd wagon)	$500

PARTS

Ford hikes markup for warranty parts

continued from PAGE 1

Ford is basing the increase on model years.

"We're asking for 40 percent across the board (from Chrysler)," Galeana said. "But we'd take the same thing if we have to."

The amount the factories pay for warranty work has been an explosive issue for years.

A study released by the National Automobile Dealers Association shows dealers lost an average $63,000 annually with the 30 percent markup.

The industry had expected GM to lead the way on the markup issue during the NADA convention in Dallas last February. According to GM dealers, GM was expected to increase payments to 40 percent this year, 45 percent next year and 50 percent in 1994.

Wagner: We recognize their needs.

But GM spokesman Duane Poole said there are no plans to increase the payments in the near future, a position that disappoints GM dealers.

"We had some good vibes there at one time" from GM, said Frank Anderson, former NADA president and owner of Sir Walter Chevrolet Co. in Raleigh, N.C.

Like Galeana, Anderson said he's disappointed that Ford is not making the increases retroactive, but he said Ford's new policy "shows a good faith effort." Anderson believes GM must "make some sort of move."

Tom Wagner, general manager of Ford's Parts and Service Division, concedes that "40 percent is not quite as much" as the dealers wanted, but he said the company realized some increase was needed.

"The dealers are faced with a lot of things that we (Ford) and the government are imposing on them," Wagner said. Those things include costs for hazardous waste removal and much more sophisticated equipment and people to operate that equipment.

"This says we recognize their needs," Wagner said. "Instead of fighting, we need to band together for customer satisfaction."

Some Ford dealers aren't happy. Ed Mullane, a dissident New Jersey Ford dealer and president of the Ford Dealers Alliance, an association of 1,700 Ford dealers, said, "I'm not ecstatic at all. They know they're not paying adequately."

But the leader in the parts markup fight, Ford dealer Clark Spikes, credits Ford with "moving in the right direction." Spikes, owner of Spikes Motor Co. in Mission, Texas, said the increase is "better than nothing."

According to NADA figures, warranty work represented an average 15.9 percent of dealer repairs in 1989, 17.4 percent in 1990 and 17.8 percent last year.

Kurt Johnson, chairman of the Ford Dealer Council, praised Ford's leadership role on this issue. He said the increase is the result of successful negotiations between the factory and the council, and he said dealers never really expected to get the raises retroactively.

He said, "This shows the trust between the company and the council to enhance customer satisfaction." AN

Jaguar and Orbital plan two-stroke

DIANA T. KURYLKO

Staff Reporter

Jaguar Cars Ltd. and Orbital Engine Corp. said last week they have developed a new two-stroke, six-cylinder engine that could power the luxury maker's cars by the end of the decade.

A Jaguar spokesman said, however, that the V-6 probably could not go into production until the late 1990s, pending further breakthroughs in catalytic converter technology. That would appear to rule out having the engine ready for the anticipated 1998 introduction of the X200, Jaguar's proposed all-new small sedan.

Jaguar, which is slapped with gas-guzzler penalties on its V-12 engine in the United States, desperately needs a more efficient powerplant to meet tighter new pollution requirements being phased in. Jaguar said last week the new V-6 has the potential to deliver the same horsepower — 350 — as its new V-12 engine and is 40 percent lighter.

Jaguar said the engine has been under development for 4½ years at the company's research center in Coventry, England; at Orbital's facilities in Australia; and at Queens University in Belfast, Northern Ireland. The company said the next phase is to develop a 350-hp demonstrator engine, which may come in two years.

The Australian companyis building a plant in Tecumseh, Mich., to produce two-stroke engines. It has licensing agreements with General Motors, Ford Motor Co., Fiat Auto S.p.A. and Volkswagen AG.

Special Correspondent Pedr Davis in Sydney, Australia, contributed to this report.

Chrysler signs Malaysia deal

HIGHLAND PARK, Mich. — Chrysler Corp. has signed a licensing agreement with MBf Automobile Sdn Bhd for the assembly, distribution and sale of right-hand-drive Jeep Cherokees for the Malaysian market.

Assembly is expected to begin in 1993. Malaysia's four-wheel-drive market has grown an average of more than 60 percent annually for the past four years and further growth is expected, Chrysler said.

Joseph Cappy, Chrysler vice president of international operations, said "a major percentage" of the Cherokee components will be built in North America and shipped for assembly.

MBf Holdings is a conglomerate involved in automotive distribution, financial services, manufacturing and property management. ■

Output waits out holidays

ANNE E. WRIGHT

Chief Statistician

All U.S. car and truck assembly plants will be closed today in observance of Memorial Day.

All Canadian facilities were closed last Monday in observance of Victoria Day.

Car production in the United States was 137,303 last week, down 1.3 percent from the prior week and up 30.7 percent from the year-ago holiday week.

Last year, U.S. assembly plants worked four days; three car plants were closed for model changeover and two were idle because of slow sales.

Year-to-date, car production in the United States is 2,287,065, an increase of 4.8 percent over the same period in 1991.

Last week's estimated car assembly in Canada was 21,009, down 2.9 percent from the prior week and 7.3 percent from the year-ago week.

Canadian car production so far this year is 408,727, down 4.7 percent from 1991.

U.S. truck producers' estimated output last week was 94,471 units, 29 more than the prior week and 20.4 percent higher than the year-ago holiday week.

So far this year, U.S. truck producers have assembled 1,592,488 vehicles, an increase of 25.0 percent over the same period last year.

Canadian truck producers' estimated assembly was 17,038 last week, up 2.6 percent from the prior week and 8.6 percent from the year-ago week.

Year-to-date Canadian truck production is 433,968, up 33.2 percent from 1991.

Last week's estimated daily build rate of cars and trucks produced in the United States and Canada was 53,964, a drop of 0.7 percent from the prior week and a drop of 2.7 percent from the year-ago four-day holiday week.

Chrysler Corp. scheduled Saturday overtime at the Windsor, Ontario; and Pillette Road (Windsor) truck plants last week.

The company scheduled daily overtime this week at seven U.S. assembly plants; St. Louis; Sterling Heights, Mich.; Jefferson North (Detroit); Belvidere, Ill.; Warren, Mich.; Newark, Del.; and Toledo, Ohio.

GM ran one shift of Saturday overtime last week at the Oshawa, Ontario, truck facility and two shifts at the Scarborough, Ontario, truck plant.

The company also scheduled overtime last week on the Suburban line at the Janesville, Wis., truck plant.

Ford Motor Co. scheduled daily overtime last week at the Atlanta; Chicago; and St. Thomas, Ontario, car plants.

Ford's Twin Cities, (St. Paul, Minn.); Edison, N.J.; Louisville, Ky.; and St. Louis truck plants also worked daily overtime.

The Kansas City, Mo., car and truck facilities were scheduled for daily overtime last week. ■

SPECIFICATIONS

1992 model car specifications

New-car and light-truck specifications are compiled by *Automotive News* from information supplied by automakers, car divisions, vehicle importers, the Motor Vehicle Manufacturers Association and other sources. Base models are listed. Upgraded-trim versions without changes in engines or dimensions are not listed.

Engine classifications are: I — inline; V — V-shaped block; H — horizontally opposed; R — rotary.

Transmission classifications are: M — manual; A — automatic.

Drive system classifications are: F — front-wheel drive; R — rear-wheel drive; 4 — four-wheel drive.

New-car dimensions and capacities are explained at the top of the chart. Every reasonable precaution has been taken to insure accuracy, but *Automotive News* cannot assume any liability by reason of inaccuracies or omissions. Specifications are subject to change without notice.

Make and Model	Dimensions									Engines							Capacities			Miscellaneous				
	Wheelbase (in.)	Overall Length (in.)	Overall Width (in.)	Overall Height (in.)	Curb Weight (lbs.)	Front-seat Headroom (in.)	Front-seat Legroom (in.)	Front Tread (in.)	Rear Tread (in.)	Type	Number of Valves	Bore and Stroke (in.)	Displacement (liters)	Compression Ratio	Net hp at rpm	Net Torque (foot-pounds) at rpm	Fuel Tank (U.S. gals.)	Cooling System with heater (qts.)	Crankcase with filter (qts.)	Transmission (standard)	Axle Ratio (standard)	Drive System	Wheel Diameter (in.)	Number of Passengers

Domestic and import classifications by vehicle

First column lists cars and light trucks for sale in United States, arranged by make. Models in italics are made by a different automaker than the seller or by a joint venture. Vehicle names are repeated for models sourced in more than one country. ★ indicates that the EPA views the combined fleet of such models as imported; ★★ indicates the EPA treats the combined fleet as domestic.

Second column lists country where vehicle was assembled. For vehicles assembled in Canada, the "D" following the country means vehicle has 50 percent or more U.S. and Canadian content and is considered domestic by U.S. Treasury Department; "I" indicates less than 50 percent.

Third column is based on EPA fuel economy rules for domestic and import fleets. "D" indicates vehicle has 75 percent or more Canadian and U.S. content; "I" indicates 75 percent or less; "?" indicates manufacturer has not announced content details.

Example: Toyota Corolla sedans built in Canada are treated as domestic by U.S. Treasury and treated as an import by EPA. Also, EPA considers all Corollas together to be imported.

*U.S. and Canadian officials disagree on the duty status and North American content of Geo Metro, Geo Tracker, Civic 3-dr., Suzuki Swift and Sidekick built in Canada. Currently, they are classified as domestics.

PRICES

Retail prices — 1992 cars
(domestic and imported)

This table shows the prices of 1992 domestic and imported cars as of April 7, 1992. All prices are manufacturers' suggested retail prices. Imported-car prices include ocean freight and U.S. import duty. None of the prices include destination charges, state and local taxes, optional equipment or the 10 percent U.S. luxury tax on transactions over $30,000.

In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned and "Pkg." means the item is part of an option package and is not priced separately.

Yugo America Inc. has not received any 1992 models from Yugoslavia.

Retail prices — 1992 pickup trucks
(domestic and imported)

This table shows the prices of domestic and imported light pickup trucks as of April 7, 1992. Prices are manufacturers' suggested retail prices. Import prices include ocean freight and U.S. import duty. None of the vehicle prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the retail buyer. Prices are for the base vehicle with the base engine. Wheelbase (w.b.) is listed in inches when necessary to identify the model. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned and "Pkg." means the item is part of an option package and is not priced separately.

Retail prices — 1992 vans (domestic and imported)

This table shows the prices of domestic and imported vans as of April 7, 1992. Prices are manufacturers' suggested retail prices. Imported van prices include ocean freight and U.S. import duty. None of the vehicle prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the retail buyer. Prices are for the base vehicle with the base engine. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned and "Pkg." means the item is part of an option package and is not priced separately.

U.S. new-truck outlets

The number of new truck dealer outlets in the U.S. decreased by 543 last year, bringing the Jan. 1, 1992 truck dealer population to 25,893. Three makers increased their franchise totals; 28 showed declines; one remained unchanged. Makers of vans and sport-utilities are included in the census. Figures were collected from light-, medium and heavy-truck manufacturers.

President	
John Hertz	1920-1925

General Motors Truck Co.*

General Manager	
W.L. Day	1911-1925

*General Motors Truck Co. and Yellow Coach Mfg. Co. merged in 1925.

Rapid Motor Vehicle Co.

Presidents	
A.G. North	1905-1911
Max Grabowski	1900-1905

GLOSSARY

1. **CAFE** — Corporate Average Fuel Economy. The mpg average that a manufacturer must achieve for its entire fleet of cars for a model to avoid paying a penalty. There is a separate CAFE for light trucks. Current CAFE for cars is 27.5 mpg.
2. **CALENDAR YEAR PRODUCTION** — vehicles produced from January 1 to December 31.
3. **CALENDAR YEAR SALES** — retail sales of vehicles from January 1 to December 31.
4. **CAPTIVE IMPORTS** — a vehicle made outside the U.S. or Canada and sold in the U.S. by a Big 3 company.
5. **DAYS' SUPPLY** — number of days needed to sell all vehicles in inventory, based on the previous month's sales rate. Inventory and days' supply may be expressed in terms of industry as a whole or for individual companies, makes or nameplates.
6. **DEALERSHIP** — the authorized (franchised) representative of a motor vehicle manufacturer/importer.
7. **DOMESTIC** — a vehicle produced in the U.S. or Canada.
8. **FLEET SALES** — sales to an individual or company that has been granted fleet status by a manufacturer — usually ten or more purchases at a time.
9. **FRANCHISE** — a contract authorizing a person or persons to represent a vehicle manufacturer/importer for sales and service for a specific period.
10. **IMPORTED** — a vehicle produced outside of the U.S. or Canada and sold in the U.S.
11. **INVENTORY** — unit count of vehicles on hand at dealerships, ports of entry and in transit on a specific date.
12. **LIGHT-VEHICLE** — a car or light truck (with a gross vehicle weight of 14,000 pounds or less).
13. **MAKE** — brand name of a car or truck, e.g., Chevrolet, Ford, Dodge, Honda.
14. **MARKET SEGMENT** — the category of the market in which a vehicle competes. Example: subcompact, compact, intermediate, standard, luxury, specialty, van, minivan, pickup, sport-utility. The portion of the entire market represented by sales of a specific make.
15. **MODEL** — body style: e.g., 4-door sedan, convertible, 3-door hatchback, station wagon.
16. **MODEL YEAR PRODUCTION** — vehicles produced bearing the designation of a specific model year. It does not coincide with calendar year production.
17. **MODEL YEAR SALES** — retail sales of vehicles from October 1 to September 30.
18. **NAMEPLATE** — given name of a vehicle by its manufacturer, e.g., Caprice, Mustang, Dynasty, Accord. Line is a synonym for nameplate.
19. **NIADA** — National Independent Automobile Dealers Association (a used-car organization).
20. **OUTLET** — synonymous with dealership.
21. **PLATFORM** — the main structural element or backbone of a vehicle to which the suspension, powertrain and body are mounted. In older vehicles, it was traditionally the frame. In newer unibody vehicles, it is the lower, horizontal sheet metal stamping.
22. **REGISTRATION** — motor vehicle ownership information that is filed with the state.
23. **RETAIL SALES** — a new-car or truck sale, including both dealer and fleet deliveries and dealership leases.
24. **SALES BY MANUFACTURER MARKETING UNITS** — sales totals with domestic totals including captive imports and import totals, including transplants and all corporate divisions.
25. **SHARE (MARKET SHARE)** — the portion of the entire market represented by sales of a specific make.
26. **SPECIFICATIONS** — vehicle dimensions and capacities including engine and drive systems.
27. **TRANSPLANT** — a vehicle built in the U.S. or Canada by a foreign manufacturer.

late news

Europe dealers win reprieve

The European Commission said last Friday that new-car dealers in the 12-nation European Community will be able to sell cars not fitted with catalytic converters for a "reasonable" period after Jan. 1.

A new directive requires that all cars sold in the community after that date have catalytic converters. Manufacturers had been concerned about what would happen to cars shipped, but not sold, by Jan. 1.

As written, the regulation would have forced makers and/or dealers to absorb the cost of any cars that remained unsold by the deadline.

U.S. claws back

Lutz sees Big 3 regaining 1-3 points a year from Japan

MARY CONNELLY
Staff Reporter

U.S. automakers will "claw" one to three percentage points of car and truck market share away from Japanese makes each year through the mid 1990s, predicts Chrysler Corp. President Robert Lutz.

Rising costs for the Japanese and a narrowing product-quality gap between U.S. and Japanese vehicles will propel the domestic resurgence, Lutz said.

A Big 3 gain of two points a year for the next three years would reduce the Japanese share of the U.S. car and light-truck market to less than 20 percent by 1995. Japanese makes took 25.7 percent of the U.S. market in 1991.

Chrysler will use recent price hikes by Japanese vehicle makers to gain market share, Lutz said.

But while maintaining that Chrysler will not hike prices because the Japanese have done so, Lutz said the Big 3 are likely to raise prices slightly in the 1993 model year because of rising costs.

"We do not consider the Japanese raising their prices as an umbrella that is going to permit us to improve our per-unit margins," Lutz said. "We view this frankly as an opportunity to regain market share."

Nonetheless, the Big 3 are unlikely to break the long-standing tradition of price increases at the start of a new model year.

Big 3 plan consortium for emissions

MARY CONNELLY
Staff Reporter

The Big 3 are expected to announce a new "breakthrough" consortium June 8, aimed at developing joint technology to reduce vehicle emissions.

It will be the ninth Big 3 consortium formed since 1988. The cooperative ventures are designed to help cut costs of technology development.

The emissions consortium is viewed as a high-profile, significant development in Big 3 cooperation because it deals with a core industry issue that could significantly affect competitiveness.

Also June 8, General Motors, Ford Motor Co. and Chrysler Corp. are expected to announce the formation of USCAR, an administrative umbrella for all the Big 3's consortia activities. The organization, which will monitor consortia activities, will be headquartered in Dearborn near Ford's headquarters, according to sources familiar with the plans.

Separately, Chrysler Corp. President Robert Lutz said the Big 3 formed a joint venture to do competitive off-shore vehicle teardowns. A teardown involves dissembling a vehicle for competitive analysis.

"We now have a jointly owned and managed organization that does one tear down, and we will all have access to it," Lutz said.

"Why should each of us go out

Tom Dioguardi, once a Jeep-Eagle dealer in Rochester, N.Y., now spends his time selling used cars since Chrysler Credit liquidated his dealership.

OUT OF TRUST

Dealers' woes grow hellish when they cross the lender

CHARLES M. THOMAS
Staff Reporter

For car dealers who get out of trust with their lenders, business can become a nightmare of cut-off credit, the end of payments from the automaker and an inability to order new vehicles.

When a dealer fails to pay off a lender for sold vehicles, that dealer is out of trust — and in danger of losing everything.

In the last three years, Chrysler Credit Corp. has sued 38 dealers who were out of trust — a tiny fraction of Chrysler's 5,000 dealers. Those out-of-trust dealers include several Jeep-Eagle dealers who are now in bankruptcy or are out of business and who have countersued Chrysler Credit.

These Jeep-Eagle dealers now see Chrysler Credit as the bogeyman that drove them out.

The recession and mistakes contributed to the failure of the dealers. But the problems grew when they fell out of trust with Chrysler Credit — a serious breach of their finance agreement.

Now, some of the dealers who have sued are asserting that they were victims of a plan by Chrysler Corp. to consolidate brands.

"Chrysler Credit can act in a regulatory vacuum and do the dirty work of Chrysler Corp.," says Eugene Isaak, an attorney with the Boston-based law firm Lawson & Weitzen, representing one of the bankrupt dealerships. "State and federal laws don't address termination by a manufacturer's lending arm."

E. Thomas Pappert, Chrysler Corp. sales vice president, calls allegations of a plan to eliminate dealers "ludicrous and groundless."

"We don't want to comment on existing litigation, but there is no plan or attempt to conspire to do anything," he said.

Chrysler officials say dealers who did sales out of trust have no one to blame but themselves.

And not all the dealers' allegations against Chrysler Credit have held up. Last November, B.P.G. Autoland Jeep-Eagle, a Connecticut dealership, obtained a preliminary injunction from U.S. District Court in Massachusetts to stop Chrysler Credit from placing the dealership on credit hold.

But in March the judge lifted the injunction, saying that the dealership was irresponsible or even misrepresented some facts.

Once out of trust, the dealers say they were placed on finance hold, which meant they couldn't order vehicles.

Big 3 gain, but Japan still leads in quality

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Although the Big 3 have made marked strides in product quality, they are still looking up at the Japanese.

Domestic makes made an 8 percent gain in the 1992 model year — and Saturn cracked the top 10 — but the Japanese climbed to new heights, according to the latest Initial Quality Study from J.D. Power and Associates.

The average Japanese make had 105 problems per 100 cars, down from 112 last year. Toyota models, as usual, ruled many segments, including four of five in light trucks. The Big 3 score was 136, down from 148 last year.

The J.D. Power IQS survey is widely recognized, but it's not the only one telling the quality story. Other Power studies and other independent sources all support domestic industry claims that their product quality — loosely defined as reliability and dependability — has improved. But they also illustrate how tough it will be to catch up when the leaders constantly advance.

Some trends:

■ Cars keep getting better. According to Power's IQS survey, the industry average — measured by problems per 100 vehicles reported in the first 90 days of ownership — dropped from 133 to 125 this year. When Power began the current version of its survey in 1987, the industry average was 166.

Power's Customer Satisfaction Index rose 22 percent from 1987 to 1991. About one-fourth of that survey deals with product reliability.

Consumer Reports also uses a defects-per-100 yardstick. Its re-

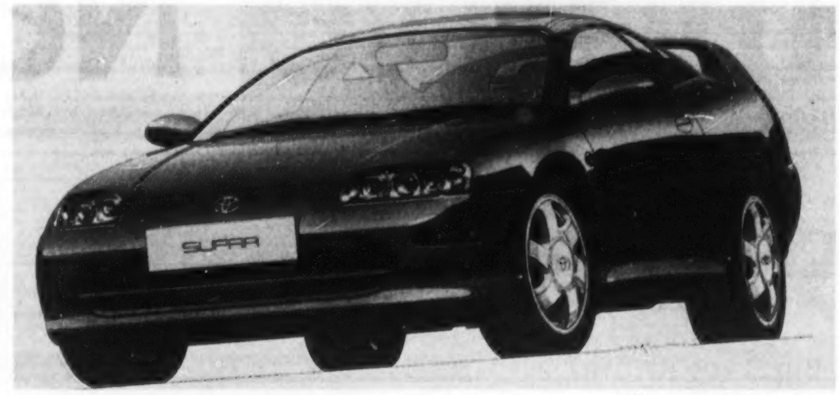
correction

A May 18 story on Page 16 overstated April sales of Mercedes-Benz S-class cars. The correct figure was 1,935, about 43 percent above the year-ago month. The same story also overstated the reach of Mercedes' Win-Win lease program. The program does not include the 500E, 600SEL, 300SL and 500SL.



HANS G. LEHMANN/HIDDEN IMAGE

Supra surprise

The new Toyota Supra is expected to be unveiled next February. This artist's rendering, based on spy photos of prototypes, shows a low-sloping hood; low ground clearance; and a high, integrated tail spoiler. The top version is expected to be powered by a turbocharged dual overhead cam 3.0-liter inline six-cylinder with an estimated top speed of 186 mph. The engine will be mated to either a six-speed manual or four-speed automatic transmission.

John McNamara and unnamed accomplices with racketeering in the General Motors Acceptance Corp. fraud case.

The grand jury charged McNamara and "others employed by and associated with" McNamara Buick-Pontiac Inc. in Port Jefferson Station, N.Y.

The case got another twist last week when *Newsday* reported that McNamara had cooperated with investigators probing his relationship with local government officials. McNamara's attorney, Allen Schwartz, would not comment on the story.

GMAC expects to lose $171 million in loans for vehicles that existed only on paper. McNamara forfeited more than $400 million in assets to settle the government's civil charges in the case. The grand jury said that from 1985 through December 1991, GMAC advanced McNamara more than $6.25 billion in short-term loans. He repaid about $5.8 billion.

Ford wins Keystone suit

DETROIT — Keystone Automotive Industries of Pomona, Calif., agreed to pay Ford Motor Co. $1.8 million to settle a lawsuit involving false ad claims for crash parts.

In the suit, filed by Ford in 1987, the U.S. District Court found that Keystone knowingly misrepresented the quality of the aftermarket crash parts it distributes for Ford vehicles.

Keystone, the largest U.S. distributor of aftermarket crash parts, which are copied from original equipment, is also required to place corrective ads and include disclaimers in its promotions.

The ads and disclaimers will state that Keystone crash parts do not meet Ford manufacturing specifications for fit, finish, weight and overall quality; are not of "like kind and quality" as Ford's parts; may require substantial refitting for installation; are not subject to any independent quality control program; may corrode at a faster rate than Ford parts; and are not covered by Ford's vehicle warranty.

GM delays credit card plan

DETROIT — General Motors delayed introduction of its long-awaited MasterCard program, probably until next year, according to *Advertising Age,* a sister publication to *Automotive News.*

GM also has pulled the card's estimated $40 million direct marketing account from McCann Direct, a subsidiary of McCann-Erickson Worldwide in New York.

The MasterCard program is expected to offer card holders credits toward discounts on car servicing and new-vehicle purchases. The card was to have been offered through Bank One, but also have GM's name on it.

Truck Group aids fuels study

WASHINGTON — The U.S. Department of Energy will study the impact of alterative fuels on the trucking industry in conjunction with the American Trucking Associations' Foundation.

The Department of Energy's National Renewable Energy Laboratory awarded the Foundation's Trucking Research Institute a half-million dollar subcontract for the initial phase of the study.

The Research Institute will manage real-life demonstration projects involving alternate-fueled heavy trucks and will collect data on other on-the-road demonstration projects, which it will send to the Alternative Fuels Data Center.

Another pitch for canisters

WASHINGTON — The Natural Resources Defense Council, the American Petroleum Institute and an assortment of Virginia gas stations and jobbers want the EPA to force automakers to install vapor recovery canisters on vehicles.

The petitioners failed to get a Richmond, Va., court to take the message to the EPA. They now have gone to the U.S. Court of Appeals for the District of Columbia Circuit. They argue the 1990 Clean Air Act ordered EPA to issue the canister rule by last November.

The EPA has favored vapor recovery canisters on vehicles instead of devices installed on gas pumps. But automakers and the National Highway Traffic Safety Administration say they are a safety hazard. Earlier this year, the Bush administration ordered the EPA to drop the on-board canister requirements.

Pontiac, Olds recall minivans

DETROIT — General Motors is recalling about 113,000 1990 and 1991 Pontiac Trans Sport and Oldsmobile Silhouette minivans to replace upper instrument panel glove box doors.

GM said the glove box door may not stay closed during an accident, increasing the chances for injury.

The Chevrolet Lumina APV is not involved in the recall because it uses a different glove box door design.

GM, Baltic firm OK Chevy deal

DETROIT — General Motors says it will sell Chevrolet cars and trucks through a distributor in Estonia, its first marketing of North American-built vehicles in the Baltic states.

The deal with Balt Motors in Tallin, Estonia, will involve about 200 vehicles this year with plans uncertain for 1993 and beyond. GM said it will train mechanics to service the vehicles, which go on sale in midsummer.

The Chevrolet Cavaliers, Suburbans, Blazers and pickups will join Opel cars as the second line Balt will handle.

GM said it expects to soon sign more dealer agreements in the Baltics and in other new states of the former Soviet Union.

briefly

Lutz' choice for top job? Eaton

It's no secret that **Chrysler** Corp. President Bob Lutz wanted Lee Iacocca's chairman job. But in March Lutz lost out to **General Motors Europe** exec Bob Eaton. Now Lutz, who is looking more relaxed and healthy than he has for years, is casting his own vote for Eaton. "If I had been a voting board member I might well have brought myself to vote for Bob Eaton instead of myself," Lutz said last week. "He brings all the qualities to this company that are needed over the next 10 to 12 years."

Eaton: Now it's unanimous

BACK TO SCHOOL — Now that we've learned to pronounce *Fahrvergnugen,* **Isuzu Trucks of America Inc.** offers a lesson on the Japanese vehicle maker's name. How do you pronounce it? "EE-SUE-ZOO," asserts the firm's in-house magazine. Isuzu, by the way, means "50 bells."

NADA SPECIAL — The latest issue of *Automotive Executive,* the National Automobile Dealers Association's publication for dealers, is a 75th anniversary special representing a year's research into the association's history. Pioneer dealers met in Washington in 1917 to fight a 5 percent luxury tax on cars. They were effective. Cars were excluded, and the luxury tax was lowered to 3 percent.

LOCK AND UNLOAD — The National Insurance Crime Bureau says car thefts were up 2 percent during recession year 1991, which means about 1.7 million were stolen. No word on how many vanished from dealerships. The bureau estimates that 13 percent of the stolen cars had the keys inside, so lock up. Leave no valuables in view. And turn front wheels sharply into the curb to foil the 10 percent of thieves who used tow rigs.

ESPECIALLY IN RED — The first 40 sales last week at the first **GM** dealership in Moscow give some clues to the post-Communist Russian character. Practical Russians made the **Chevrolet** Caprice (just over $23,000) the No. 1 seller. "They like it for its value," says Jim Lyle, leader of the American investors in the showroom at No. 1 Puskin Square. And yes, a few capitalistic Russians have bought **Cadillac** Sevilles. But when it comes to minivans, Russians are rebels, choosing the **Pontiac** Trans Sport over the Chevrolet Astro 8 units to 3. Says Lyle: "They like the radical styling."

RACE SUNDAY, SELL MONDAY — The American Methanol Institute timed its press release to arrive with the hoopla from Indianapolis. It noted that U.S. automakers are starting to sell cars that run on methanol, "the only fuel used by Indy 500 race cars since 1964." The release mentions performance, environmental benefits and safety, but it doesn't mention the extra pit stops required by methanol vehicles.

BRIGHT IDEA? Inventor Harris Davis of Rains, S.C., wants whitewall tires to come back as fluorescents. Makes it safer to drive at night, he says. Two decades ago, Goodyear tried the idea on bicycle tires, but they were not a commercial success.

Mid-May sales mixed: trucks rise, cars fall

JIM HENRY
Staff Reporter

Light trucks continued to lead a rocky recovery in mid-May, with sales climbing 10.2 percent above a disappointing year-ago period. But car sales fell 2.3 percent, so the industry car and truck total topped the year-ago figure by only 2.1 percent.

Those percentages are based on daily selling rates. Mid-May's 403,525 sales were actually 14.9 percent better than last year. But the May 11-20 period had nine selling days this year and eight a year ago. All comparisons in this article are based on the daily selling rate.

General Motors' sales rose 1.8 percent, spurred by a 6.5 percent improvement in light trucks. Ford Motor Co. climbed 12.2 percent, with trucks jumping 16.0 percent.

Automotive News estimates Chrysler Corp. was up 7.9 percent, with its light trucks shooting up more than 25 percent. Chrysler refuses to disclose 10-day sales; it reports deliveries on only a monthly basis.

From May 11 to 20, sales dipped 15.5 percent for American Honda Motor Co. Inc., and Nissan Motor Corp. in U.S.A. dropped 9.4 percent.

Sales climbed 3.2 percent for Toyota Motor Sales U.S.A. Inc., including a 2.6 percent gain in light trucks. *Automotive News* estimates sales of other importers.

Last year, a much-ballyhooed spring-summer sales recovery turned out to be a flash in the pan that fizzled by the end of July. This year, forecasters say the recovery should last longer. They point to improved consumer confidence, pent-up demand for autos following poor 1991 sales and the fact the government has made improving the economy a top priority.

"Roughly, at this time last year, few people in Washington — at least in the executive branch or in the Fed — were focused on the need to improve the economy, and interest rates were higher," said Philip Fricke, auto industry analyst for Prudential-Bache Securities Inc. in New York.

He said 1991 sales were more than 2 million units short of totals predicted by economic models.

"That in and of itself does not imply that there's got to be a correction in the short term, but it does suggest where the forces of correction are building," he said.

Through April, car and truck sales were up 198,246 units, or 5.1 percent, over 1991.

Meanwhile, the Conference Board reported that its consumer confidence index for May was 71.6, up 6.5 points from April. (The base year of the index is 1985.) About 7.4 percent of the respondents said they plan to purchase an automobile in the next six months, a gain of almost 1 percentage point from the previous month.

"This is the third consecutive month in which consumer confidence has registered a smart gain. This consistent improvement in sentiment appears to leave little doubt that the economy is at long last recovering," said Fabian Linden, executive director of the Conference Board's Consumer Research Center.

Nevertheless, some regions, such as the Northeast, continue to lag.

"We have a tremendous number of out-of-work people in this area," said Gregory Stewart, chief executive of Buick of Westwood (N.J.). Stewart said he managed to "just about double" sales by switching to a one-price approach in February.

But he said floor traffic is still depressed, and unemployment seems to be rising.

"I advertised for a service adviser, and you wouldn't believe how overqualified some of the applicants have been," he said. "They're willing to take not just a step down, but a whole flight of stairs down." ∎

Lease plans aim at cash buyer

KATHY JACKSON
Staff Reporter

Ford Motor Co. and General Motors have developed new lease programs aimed at customers who pay cash for their cars. Most are retirees.

Under both programs, the lease customer does not have a monthly payment. Instead, the customer makes only one payment, at the beginning of the term, which cuts the cost of the lease in some cases by as much as 14 percent during the term of the lease.

Dealers can structure the lease plans according to customers' needs.

Leigh Jackson, owner of Libertyville Lincoln-Mercury in Libertyville, Ill., provided the following example. A cash-paying customer might have to plunk down $30,000 for a luxury car. But to lease that same vehicle for 24 or 36 months might cost him only $15,000. By leasing, the customer keeps $15,000. He also saves 10 to 14 percent over the course of this lease compared with a conventional lease.

The value of the vehicle at the end of the lease is guaranteed by Ford. The customer also has the option to buy the vehicle any time during the lease period at a guaranteed price.

"You have the convenience of not tying up all your money at once," Jackson said. "You also get the convenience of no payments and protection against the resale value."

In May, Ford took its program national after a five-month test in parts of the Southeast, West, Midwest and Long Island, N.Y. Jackson said about 20 percent of his lease customers used the Red Carpet Advanced Purchase Plan while he was part of the test program.

GM is testing a program in Florida and may expand it to California and Arizona, said George Reganis, assistant director of retail leasing for General Motors Acceptance Corp. GM's program is administered by Capital Corp., a Salt Lake City bank owned by GMAC.

Like Ford's program, the target is the customer who pays cash. With a $30,000 vehicle, the GM lessee sends $15,000 to Capital and retains $15,000. Capital makes the monthly payments to the local GMAC office and pays interest on the balance, quarterly, to the lessee until the lease period expires.

Ford gives its credit up front, Reganis said.

GM, however, gives its credit in quarterly interest payments; it guarantees the future value of the vehicle. Reganis said about 15 percent of the lease customers in Florida used the one-payment system since its inception last September.

"Today, you must be customer driven," he said. "The potential cutomers are retirees."

Cash-paying customers are out there. Arthur Spinella, director of automotive research at CNW Marketing Research in Bandon, Ore., said about 10 percent of car buyers pay cash. About 3 percent use the one-payment lease concept, which some dealers have been offering on their own, he added.

Spinella projects that the one-payment lease market eventually will account for 8 to 10 percent of individual leasing programs. ∎

Ford kills early-order allowance to rental fleets

CHARLES M. THOMAS
Staff Reporter

Ford Motor Co. is removing still more of the subsidies it has provided on vehicles sold to daily-rental fleets.

Ford will eliminate "fast-start" allowances of hundreds of dollars each on 1993-model program vehicles — something car dealers have advocated for years.

Other automakers may follow suit.

The change should improve Ford's profits and push up rental prices to consumers.

Under "fast-start," daily rental companies are rewarded by automakers for ordering vehicles early. Rental companies can get $400 or more for every unit ordered before a specified date.

The incentive program has given factories an idea of vehicle requirements for daily rental companies.

Ford told daily rental companies that it would continue buying back all rental vehicles for the 1993 model year. The automaker will continue to require daily rental companies to keep units in service at least six months and not more than 12 months.

Daily rental companies in tourist states like Florida and Colorado must pay if they turn in cars sooner. Ford penalizes rental companies $100 per vehicle turned in after four to five months in service and $50 per vehicle turned in after five to six months in service.

In the last year, the Big 3 have been reducing their sales of the unprofitable daily-rental program cars.

General Motors has not announced its 1993 fleet incentive program for daily rental companies, but the company stresses that it wants to "improve the profitability of its daily rental fleets."

A GM spokesman said the No 1 automaker also is considering whether to lengthen the service time of daily rental units. For 1992 models, the range was six to 15 months, with a cap of 40,000 miles.

For years, the National Automobile Dealers Association has asked automakers to halt fast-start incentives, arguing that the practice allows rental companies to buy cars from the manufacturer cheaper than dealers can.

And when daily rental companies sold the vehicles on their used-car lots, fast-start incentives gave them a price advantage over dealers.

But Richard Strauss, NADA president and owner of Dick Strauss Ford-Isuzu-Suzuki in Richmond, Va., said Ford's elimination of fast-start allowances is less important to dealers now than it was three years ago.

"It's more symbolic for dealers than anything else," said Strauss, "now that the factories are purchasing 100 percent of the program cars." ∎

Kia, Indonesian firm OK kit-assembly deal

SEOUL — Kia Motors Corp. said last week it has signed an agreement to supply 10,000 light-truck and van kits a year to Indonesia's Udatinda Group.

Udatinda, which recently ended an assembly relationship with General Motors-Holden's of Australia, will begin assembling Kia's Besta vans and Ceres multipurpose trucks at the end of this year.

Value of the agreement was not disclosed, but Kia said the program eventually will be expanded to include its Pride/Festiva and Capital passenger cars. Kia will not invest in the venture at first, but has the option of acquiring a share in the future, a spokesman said.

Kia has aggressively pursued kit-assembly business. The company is negotiating deals in Iran and Vietnam and recently signed agreements in Taiwan and in the Philippines.

Van dealers grow cautious

The torrid pace of wholesale van conversion shipments may be headed for a slowdown, as dealers wait for retail sales to catch up.

Dealers have a good supply of van conversion inventory for the summer months, according to Detroit officials.

But "we are seeing a little more cautiousness in the marketplace," said Jerome Mittman, Ford Division RV sales manager.

Ford hasn't seen a significant letup in ordering from its consignment pool accounts yet. But the possibility exists if the retail market doesn't strengthen further, Mittman said.

Ford dealers also may be ordering more cautiously since the company dropped the extended free floorplanning it had been offering on conversion units earlier this year.

The most recent data available from the Recreation Vehicle Industry Association in Reston, Va., indicates the torrid pace at which the wholesale market has been running.

March shipments from converters to dealers totaled 16,900 vans, up 72.4 percent from a year ago. It was the third straight month of increases.

First-quarter shipments, totaling 47,700 units, were up 121.9 percent from like 1991, according to RVIA.

Van chassis shipments by Detroit's Big 3 to converters, portending future deliveries, also rose sharply, according to RVIA.

Detroit manufacturers shipped a total of 17,200 compact and full-sized van chassis to converters in March and 54,700 during the first quarter. That is up from 10,700 and 17,200, respectively, from the year-ago month.

Degnan named head of GMC RVs

Mark Degnan, former assistant special vehicle sales manager at GMC Truck, has taken over as manager of the department that handles RVs, van conversions and light commercial vehicles.

Keith Ball, former manager of the department, has returned to the division's truck operations as medium-duty sales executive.

Mark III chairman has fatal attack

OCALA, Fla. — Officials from Detroit's Big 3 flew to Florida last Tuesday to pay their respects to R.T. Boyd Jr., 45, chairman of Mark III Industries, who died of a massive heart attack May 24.

Boyd Jr.'s funeral was held at First Assembly of God church in Ocala on May 27.

Boyd Jr. started his van conversion company in July 1978 as a sideline to producing mobile homes. By 1982, he sold the mobile home business to devote himself exclusively to van conversions.

Mark III quickly became the industry's largest van converter. It expects to sell about 44,000 vans this year. It has grown from a 10-employee company to one employing 1,598 people in Ocala, according to Charles Dority, Mark III's president.

Dority will continue to run the company in conjunction with Thad Boyd III, the company's chief executive officer.

Boyd Jr. is survived by his wife Sally and four children.

Spartan chassis uses GM diesel

CHARLOTTE, Mich. — Spartan Motors Co. is using General Motors' 6.5-liter turbodiesel and four-speed electronic automatic transmission to create a new rear engine-powered chassis for RV manufacturers.

Spartan's new EC1K chassis will be offered on a limited basis beginning this summer and go into full production later this fall, according to company spokesman Bill Fuesz.

The chassis has a base 12,000-pound gross vehicle weight rating and can be upgraded to 16,000-pound rating. It is available on 145-, 172- and 190-inch wheelbases.

The company expects to produce about 4,000 chassis annually on a two-shift basis once production gets into full swing.

Custom Craft names officials

MILWAUKEE — Custom Craft Vehicles Inc., which converts Chevrolet and GMC vans, pickups and sport-utilities, appointed two new sales managers.

Peter Levas and Bob O' Neill, both formerly with C.T.I. Inc. in Lake Geneva, Wis., assumed new positions at Custom Craft. Levas is sales manager for the Eastern United States, and O'Neill is regional sales manager for the same region.

Bank considers special financing for conversions

JOSEPH BOHN
Truck Editor

The quality of van conversion customers has gotten the attention of Chemical Bank in New York, which is studying a national program of special low annual percentage rate financing and long-term contracts for van conversion customers.

Robert McAllister, assistant vice president of Chemical's Indirect Lending Department, said he has put together a proposal for such a plan and will present it soon to the bank's senior management.

Chemical Bank's Chemical Financial Services is a member of the Recreation Vehicle Industry Association in Reston, Va., and offers special finance terms to motor home and other RV buyers. But the bank currently has no special rates or extended terms for van conversion buyers. Neither do other banks in New York, McAllister said.

"You're talking about good, solid people. The kind we want to do financing for," he said. He compared them to luxury car buyers.

"Somebody really missed the boat on this," he added.

Van conversions account for about 50 percent of the RV market and add up to an annual market worth several billion dollars, according RVIA.

Chemical Bank, like many other banks, offers standard rate auto loans to conversion buyers with maximum 60-month terms.

McAllister wants to offer van conversion buyers a lower rate — under 8 percent — and maximum financing terms of 72 to 84 months.

Dealers welcome the bank's interest.

Skip Anderson, sales manager for Varsity Ford in Ann Arbor, Mich., said "It's a good market. We sell lots of these vans. Competition makes makes everybody keener."

Similarly, Dave Arbogast, general manager of Paul Sherry Chevrolet and Paul Sherry Chrysler-Plymouth-Dodge, both in Piqua, Ohio, said better terms would help dealers sell more.

Arbogast said banks currently are charging higher rates on longer-term contracts to offset the risks on extended finance terms.

"The consumer ends up paying for the higher rate," Arbogast said.

But used-vehicle guidebooks show that van conversions retain a much higher percentage of their value over time than do cars, and banks may be charging an unnecessary premium for extended financing.

Meanwhile, retail sales of van conversions are up sharply during the first four months of this year, according to Motor Vehicle Manufacturers Association sales data.

The industry is running at a seasonally adjusted annual selling rate of nearly 170,000 units, up 35,000 from total van conversion sales last year.

Jerry Mittman, Ford Division RV sales manager, said the company's April retail sales through pool accounts are up 100 percent from last year. Pools account for 90 percent of Ford's volume.

Sales edge upward in Mexico

MEXICO CITY -- New-vehicle sales in Mexico rose again in April, despite double-digit declines by three of the nation's five carmakers.

Overall sales for the five companies rose 2.5 percent in April. Both cars and trucks were up.

The increase came on the heels of a 52 percent increase in car sales in March, inspired largely by a change in tax rules.

Chrysler, which last year at this time was at the bottom of the Mexican sales standings, now ranks second. Its sales rose 47.8 percent in April and were up 31.8 percent for the year.

Industry leader Volkswagen dropped 14.1 percent in April, while Nissan and Ford posted slightly smaller declines. Still, all three are ahead of last year's sales.

Sales by separate truck firms, which account for a small portion of total industry sales, were up 42.8 percent in April.

The Big Five also continued their surge in production. Output, including export production, rose 7.7 percent in April.

For the year, their production was up 22.5 percent.

Big 3 consortium to research emissions

continued from PAGE 1

and buy an Infiniti J30 at $35,000, tear it to pieces and do a cost study?" he added.

The first vehicle being jointly torn down is the Renault Espace minivan. The work is being done in Warren, Mich., near the GM Technical Center, according to sources.

The emissions consortium will focus on developing technology to meet the stringent vehicle emissions standards adopted in California and under consideration in states throughout the country, according to sources familiar with the plan.

The U.S. government's blessing of the new partnership represents a big change in the government's attitude toward cooperation among U.S. automobile producers in recent years.

Japanese industry executives are likely to view the June 8 announcement as yet another indicator of the deepening cooperation among the Big 3 and between the U.S. auto industry and government.

Critics of U.S. trade practices such as Chrysler Chairman Lee Iacocca have long maintained that such cooperative efforts should be fostered in the United States just as they are in Japan.

The emissions technology consortium is being formed following 1990 amendments to the federal Clean Air Act which set varying deadlines for states to meet national air quality standards.

The toughest clean-air rules in the nation were adopted by California in September 1990. They now are being considered by a host of other states. Massachusetts and New York already have adopted the California program.

California's rules require automakers to meet progressively tighter emission standards by developing transitional low-emission vehicles, ultra-low emission vehicles and zero-emission vehicles.

For example, by 1998, 48 percent of the cars a manufacturer sells in California will have to meet federal standards. Another 48 percent have to be low-emission vehicles. Two percent must be ultra-low emission vehicles and 2 percent zero-emission vehicles.

The new emissions consortium will look at zero-emission vehicles and "everything from here to zero — TLEVS, LEVS, ULEVS," said a source familiar with the plans.

Beside the emissions consortium, the Big 3 have also formed:

- An automotive composites consortium
- An auto/oil quality improvement research program
- An advanced battery consortium
- An environmental research consortium
- A high-speed serial data communications research and development consortium
- A computer-aided design/computer-aided manufacturing consortium
- The U.S. council for automotive research
- A vehicle recycling consortium.

Calif. backs electric vehicle consortia

WILLIAM R. DIEM

Assistant Managing Editor

California keeps putting its money where its mouth is on electric cars.

Last week, the state pledged up to $2 million to back two consortia of businesses trying to establish an electric vehicle industry in California. One proposes a new automobile company. The other aims at buses, parts making and getting California ready for recharging.

"California is facing severe cutbacks in the defense industry," said Bob Aldrich, spokesman for the California Energy Commission. "A lot of those jobs are transferable into the electric vehicle industry. . . . Beating your swords into plowshares, so to speak."

The California consortia are trying to get a share of $12 million in grants being offered by the Federal Transit Administration for electric vehicle projects. The state grants are contingent on winning federal money.

Transit spokesman Richard Centner said enough proposals were received by the deadline to call the response encouraging, but he said they had not been counted or evaluated. The government expects to fund at least three proposals.

The California group proposing a new electric vehicle manufacturer is the California Electric Mobility Consortium. Solar Electric Engineering and General Electric are among the member companies.

Aldrich said the group has an $8.5 million proposal to develop and manufacture an original-equipment electric vehicle. It envisions a joint manufacturing venture with Los Angeles city and county as a "Rebuild L.A." effort. If it wins a federal grant, it could get $1.2 million in state grants.

The second consortium, CAL START, has almost $14 million from members including General Motors, Hughes Aircraft, major utilities and airports. It has asked for $4 million in federal money and $2 million from California. It has three principal programs:

- Construction of a functional prototype electric vehicle that would travel to world car shows, a $7.4 million plan.
- Demonstration of light-duty electric buses in service and a prototype medium-duty bus, a $4.3 million investment.
- A $5.7 million project aimed at preparing an infrastructure for electric vehicles. Consumers need to know "that there will be adequate and safe recharging, top-notch servicing, and environmentally responsible battery recycling," said Joshua Newman, a vice president of Amerigon Inc., a member of CAL START.

Newman said the consortium would proceed with its plans on a smaller scale even if it fails to win the federal and state money.

Staff Reporter Max Gates in Washington contributed to this report.

Chevy, Ford to battle at Detroit Grand Prix

ARLENA SAWYERS

Staff Reporter

Chevrolet and arch rival Ford Division will be trying to out-do one another in racing and hospitality when the 1992 ITT Automotive Detroit Grand Prix kicks into gear June 5-7.

Billed as a Chevy vs. Ford streetfight, the race has moved from the streets of downtown Detroit to a 2.1-mile circuit on an island in the Detroit River.

The race is the Big 3's annual opportunity to wine and dine dealers, executives and suppliers against a backdrop of high-powered race cars.

Ford, which has been out of the Championship Auto Racing Teams Series since 1971, is coming back in a big way. Ford will supply four cars and two teams with its new Ford-Cosworth XB V-8, a small but powerful high-tech engine designed and built for Ford by Cosworth Engineering.

Ford's engine most recently powered a car driven by Michael Andretti in the Indianapolis 500. Andretti, who led the race for 161 laps, lost his bid for the winner's trophy after the engine's fuel-pump belt broke.

Al Unser Jr., whose car was powered by a Chevrolet Indy V-8/A engine, won the race.

Kevin Kennedy, vice president of motorsports at Campbell & Co. in Dearborn, Mich., which represents Ford, said he doesn't believe the mishap hurt Ford's marketability as a maker of high-powered race engines.

It was the engine's fourth race.

Andretti's dominance of most of the race proves Ford is close to clinching a win, Kennedy said.

"Sure, it was disappointing," he admitted, "but our progress is unbelievable."

Chevrolet says it is looking forward to the competition provided by Ford.

"It will be a Chevy-Ford street fight," said Wally Reese, Chevrolet's Indy spokesman.

"We expected the competition to be better than it was the last year or two. When you beat yourself, it's like dancing with your sister. Having Ford come into it makes us work harder," he said.

Reese said Chevrolet's Indy V-8/A and V-8/B engines will power "about 15 or 16 cars and 12 or 13 teams" in the Detroit race.

Chevrolet has arranged for the new Indianapolis 500 winner and his team to visit General Motors factories and greet employees.

As the winner of the event, Chevrolet derived the ultimate promotional value of having 8 million to 9 million people view its success and infusing its entire division with "Chevy pride," Reese said.

Chevrolet will entertain guests in Detroit at trackside hospitality suites. The division also will tout its success in IndyCar racing by funneling information to about 1,000 U.S. publications.

Ford will provide the official truck for the Detroit race.

The division also will use the event as part of a sales incentive contest. Some 500 dealers and their spouses will get free trips to the festivities.

Local Ford dealers will get to sample the 14-turn track in Ford Mustangs during a "drive-away" Saturday.

Ford, in conjunction with First of America Bank, also will award a Mustang GT as one of 25 prizes to be given away to race-goers attending Friday's "Free Prix Day" events.

The IndyCar race, the 5th stop in the PPG IndyCar World Series, is scheduled for Sunday afternoon. Support races include the 9th annual Tide SCCA Trans-Am Race on Saturday and the Firestone Indy Lights Championship on Sunday morning. The Firestone Indy Lights Championship will feature cars powered exclusively by Buick 3800 V-6 engines.

Sponsor ITT Automotive Inc. of Auburn Hills, Mich., is an international supplier of components such as anti-lock brakes and shock absorbers.

What is quality?

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — While quality has become an industry buzzword, the definition is still murky. Especially when automakers begin applying the word to things such as "quality customer service" and a "high-quality sales experience."

Quality surveys try to measure reliability and dependability. But even given those parameters, it's hard to reach a consensus.

Consumer Reports does extensive road testing and analyzes reader questionnaires to come up with its annual quality rankings. And in spite of all the empirical data he sees, Robert Knoll, the head of the group's auto division, says quality is still an elusive issue.

"Quality is like the Supreme Court's definition of 'obscenity,' " he says. "I can't tell you what it is, but I know it when I see it."

At DRI/McGraw-Hill, which studies perceptions of quality rather than quality itself, the story is similar.

"Consumers tell us that the quality is everything from the engine to the doorknobs," says Karen Mason, auto analyst at the firm's New York office. "If the engine is wonderful but the door knob falls off, it may as well have been engine failure for all the hassle and aggravation it is going to cause the customer.

"Consumers, not the industry, determine what quality means. And consumers have been spoiled by Japanese quality, so now it means something different than it did years ago. With the addition of Lexus and Infiniti, the benchmark was raised, and the definition changed again."

J. Ferron, partner at J.D. Power & Associates in Agoura Hills, Calif., says the definition of quality is changing because the definition of "problem" is changing. He says counting the number of problems per 100 cars is still a good way to measure quality. But the standards will evolve.

You can't "anticipate what a customer thinks is a problem," Ferron says. "Our surveys show that as engine problems decrease, people begin to notice wind noise and rattles more. Those become the new problems, and fixing those becomes the new way to achieve quality."

While there is general agreement that the focus on quality has been good for the industry, most analysts say that quality alone is not enough.

"I think quality is the Madonna of American management today. It's over-hyped and over-exposed," says Jeremy Anwyl, president of Marketec Systems of Santa Ana, Calif. "If manufacturers don't back up quality with customer satisfaction and the rest, they'll have nothing."

Chris Cedergren, senior vice president of AutoPacific Group Inc., also in Santa Ana, says that refinement is "the next frontier" of quality.

"Since quality is now the price of entry into the market, manufacturers are going to have to make sure that they're thinking about all the small things, all the intangibles," he says.

Cedergren says those include everything from the placement of switches and knobs and the choice of materials to the way customers are treated.

QUALITY

Survey shows Big 3 are closing the gap

continued from PAGE 1

search shows that the number of complaints reported for new cars fell 66 percent from 1980 to 1990.

■ Slowly but surely, the Big 3 are gaining on the Japanese, most surveys show. In an Easton Consultants Inc. index measuring repairs per vehicle, the Big 3 narrowed the quality gap against all imports to a 12.1 percent difference in 1991, from 20.5 percent in 1985.

Consumer Reports says that in 1980, Big 3 products had three times as many problems as those from Toyota, Honda and Nissan. Ten years later, the spread was 2.5 to one.

Power's latest IQS survey shows that the Big 3 narrowed the gap with Asian makes from 1991 to 1992. But since 1988, the Japanese have actually widened their lead. In 1988, the domestics recorded 18 more problems per 100 cars than the Asians. This year, despite a 22 percent improvement by the Big 3 over four years, the difference was 31 problems per 100.

John Casesa, auto analyst at Wertheim Schroeder & Co. in New York, says parity is still a few years off.

"Years ago, people thought the Japanese were so good that they couldn't get any better, but that just hasn't proven true," says Casesa. "The Japanese push the benchmark higher and higher. Of course, this makes it harder for the Big 3 to close the gap."

■ Japanese automakers — and the Big 3 for that matter — aren't a monolith. During the past six years, many of the smaller Japanese makes have fallen below average in Power's initial quality rankings for cars. A few Big 3 makes — primarily Buick and Lincoln — consistently have ranked above the average.

Mazda has been as high as seventh in Power's IQS, but this year it was ranked below average. Nissan was third in 1987, fell below average last year and climbed back to fifth place with its 1992 models.

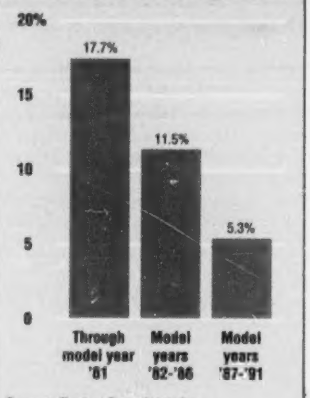
Consumer Reports says that during the 1980s, a handful of Big 3 products — all big Fords — consistently had quality on par with the Japanese. They included the Lincoln Town Car and the Ford Crown Victoria/Mercury Grand Marquis.

"There's a lot more variance out there than people realize," says David Cole, director of the Office for the Study of Automotive Transportation at the University of Michigan.

"One misnomer is that the Japanese have led on every aspect of quality. On average, the best of the Japanese are still better than the best of the Americans, but that's about all you can say. All in all, I'd call it a wash."

The Big 3 quality gap

Bars indicate the margin by which Big 3-built vehicles trail their competitors in 1990, based on an index of repair and maintenance events for all vehicles in each age class.



Source: Easton Consultants Inc.

CHARLOTTE WINTER / AUTOMOTIVE NEWS

That said, the best of the Japanese are formidable. In the latest IQS survey, the Japanese captured seven of the 12 positions above industry average, including the top five.

CONSISTENT WINNERS

Honda, Acura and Toyota have made the above-average list every year since the survey started. Lexus and Infiniti have made it in each of their three years on the market. No Big 3 make has made the cut all six years, and none has ever finished higher than fifth.

Japanese makes also dominate Power's Customer Satisfaction Index. In the 1991 survey, Japanese makes held eight of the 14 above-average spots, and five of the top six. In Power's Vehicle Performance Index, which measures operation, environment, cockpit and packaging after three years, Asians outscored domestics in every category. The gap was the greatest in the areas of vehicle operation and environment (temperature, sound system, etc.).

Power's 1991 Vehicle Dependability Index also was dominated by the Japanese, who had five of the 11 above-average spots. But the Big 3 were close behind with three.

Consumer Reports' annual auto issue is a showcase for the Japanese as well. In the current issue, 35 of the 63 vehicles on the recommended list are Japanese built, and five others come from joint ventures. *Consumer Reports* analyzes reader surveys and conducts a battery of tests on the track and the street.

DRAWBACKS TO RESEARCH

Quality research has its drawbacks. In Power's surveys, a stuck glove box is as much of a "problem" as a broken transmission. And what constitutes a defect or problem to one person may go unnoticed to another.

The owner of a $10,000 subcompact might not be bothered by a squeak, while the same noise might enrage the owner of a $40,000 luxury sedan. Conversely, some luxury car buyers might ignore small problems in order to convince themselves that they made a smart purchase.

The human element makes even the most empirical studies on quality somewhat subjective. And there is no easy way to separate actual quality from a consumer's perception of quality.

The Big 3 argue that they suffer because the perception of Japanese superiority is much greater than any actual differences. But the quality surveys, whatever their weaknesses, still show a considerable gap.

"What we haven't seen from the Big 3 is a sense of consistency. To get people back into the Big 3 products, they can't just be 'as good'," says Dave Andrea, senior research associate at the University of Michigan's Office for the Study of Automotive Transportation.

"They're fighting a perception battle as well as a product battle. They must be able to claim that they are better, and then be so consistently."

Surveys: who measures what

Here's how some quality surveys are created:

■ **J.D. Power and Associates**, of Agoura Hills, Calif., has several surveys that measure product quality at different times in a vehicle's life cycle. The Initial Quality Study measures quality after 90 days of ownership. Results for the 1992 model year came from questionnaires answered by 33,573 new car owners and 10,475 light truck owners. The response rate was 43 percent on cars and 41 percent on trucks.

Power's Customer Satisfaction Index measures overall satisfaction after one year. Quality accounts for about 25 percent of the score.

■ ***Consumer Reports*** measures vehicles in two ways. It buys each car tested and runs it for about 6,000 miles. The magazine also sends out hundreds of thousands of questionnaires to its readers. The responses are used to create frequency-of-repair charts. The editors' tests and the repair charts form the basis of an annual "recommended" list.

■ **Easton Consultants** of Hopkinton, Mass., tries to eliminate the "human bias" of surveys by measuring incidents of repair and maintenance. Easton buys the data from Industrial Market Research Inc., of Clarendon Hills, Ill. That firm collects information on more than 100,000 aftermarket service jobs each year and divides it into three categories: significant repairs, maintenance and do-it-yourself items. Easton uses that data to compare domestic and import products.

Schweitzer succeeds Levy as Renault chief

DIANA T. KURYLKO
Staff Reporter

Louis Schweitzer, who as finance chief of Renault SA engineered the French carmaker's alliance with Sweden's AB Volvo, was appointed chairman last week to replace Raymond Levy, who retired May 25.

The appointment was expected. Schweitzer, 49, a career civil servant, was nominated by Levy and has the backing of Volvo and French President Francois Mitterrand.

Schweitzer: cut deal with Volvo

Schweitzer has been president and chief operating officer of Renault since 1990.

Analysts said the appointment guarantees a smooth transition at the helm of the state-controlled carmaker and underscores the possibility of an eventual full merger between Renault and Volvo. The companies swapped shares in a complex cross-holding agreement two years ago, giving Volvo a 20 percent stake in Renault.

Like Levy, Schweitzer came from the public sector with little experience in the automotive industry. But for the past three years, he has been under the wing of Levy and has helped engineer the major restructuring program that has improved Renault quality and regained market share.

He takes over a company that will have renewed most of its products by the end of 1993 and is in the black. For the first quarter, Renault turned a profit of $440 million on revenue of $8.8 billion.

Renault holds 10.8 percent of the European passenger-car market.

Schweitzer negotiated the deal that led to the partnership with Volvo. The companies have been cooperating on components and are said to be working on a joint car for the end of the decade.

Schweitzer began his career in 1970 as an inspector in the budget department of the French Finance Ministry, a post he held for nine years.

In 1986, he joined Renault at the request of then-chairman Georges Besse, who was assassinated later that year.

Jetta, Fox, Golf (1991)	$500
All 1990 cars	$500-1,500

Customer kills Cadillac salesman

PHIL FRAME
Staff Reporter

DETROIT — A disgruntled customer shot and killed the man who sold him a used Cadillac DeVille in January and then critically wounded the manager of the used car department before being subdued by other employees.

"The (suspect) pulled up in a Jeep Wagoneer, walked into the used car office and basically started firing," said Mark Dreisbach, president and general manager of Dreisbach & Sons Cadillac in northwest Detroit.

Used-car salesman Ray Waters, who Dreisbach said was 69, was shot in the head about 5:20 p.m. Thursday and died about four hours later at a hospital in Ann Arbor, Mich. Waters had worked for the dealership about 15 years, Dreisbach said.

John Joseph, the used-car department manager, was shot in the back and was listed in critical condition Friday morning at a hospital in Farmington Hills, Mich., a spokeswoman said. Joseph, 51, has worked at the dealership more than 20 years, Dreisbach said.

"There's a terrible pall here today, but also a strong sense of pride for the way my employees handled this," Dreisbach said Friday morning. He said assistant used-car manager Michael Boal wrestled the .38-caliber semiautomatic pistol from the suspect so no other employees could be harmed. Employees held the suspect until police arrived and took the assailant into custody.

Police sought murder warrants, but they had not been issued Friday morning, a police spokeswoman said.

Dreisbach said the suspect was a customer of Waters who in January bought a 1984 Sedan DeVille with 86,000 miles on it. The suspect's motive was unknown, but Dreisbach assumed the man was upset about a problem with the car, which was sold "as is" with no warranty.

Maserati may not import cars again in '92

JIM HENRY
Staff Reporter

NEW YORK — Maserati Automobiles Inc. didn't import a single car in 1991 and probably won't import any this year either, according to a report filed by parent company DeTomaso Industries.

This isn't the first time Maserati has sat out a model year in the United States. Maserati skipped 1988 because it couldn't meet U.S. requirements for passive restraints. The automaker also sat out 1981.

So for now, Maserati remains in hibernation, selling out of a small inventory until it can get a new model certified for the United States that might turn its fortunes around.

DeTomaso Industries, which owns about 42 percent of Maserati, posted a net loss of $13.2 million for the first quarter. Fiat Auto S.p.A. owns 49 percent of Maserati, and Chrysler Corp. owns about 8 percent.

Worldwide, Maserati sold 1,800 cars at the wholesale level in 1991, down 18.5 percent from 1990. The U.S. distributor sold 45 Maseratis in 1991, compared with 87 in 1990 and 213 in 1989, according to the firm's 10-K report, filed with the U.S. Securities and Exchange Commission.

George Garbutt, president of the Baltimore-based U.S. distributor, said Maserati Automobiles Inc. has an inventory of about 20 cars, including a few cars in his retail showroom. His staff is down to a dozen people from 20 in 1990.

Garbutt wouldn't say how many cars he has sold so far this year, except to say sales are no better than last year.

Maserati's sole model here is the Spyder convertible ($50,375 for the 1991 model), which has an exemption from the passive-restraint requirement. The new Shamal was expected to be a 1992 model for the U.S. market, but passive restraint requirements have been a hurdle on that car.

Maserati has about 20 U.S. dealers and another 20 service-only points.

Loyale (1991-92, fwd sedan, awd wagon)	$500

LUTZ

U.S. claws back at Japan

continued from PAGE 1

"Since economics continue to rise and material prices are going up and health care costs continue to rise, there will undoubtedly be some pricing by American producers," Lutz said. "But I believe that what pricing we do will be extremely modest."

Asked about Lutz's comment regarding a possible price increase, a General Motors spokesman said, "Our price increases in recent years have been modest. Our introductory passenger-car prices have been below the rate of inflation in nine of the last 10 years."

At the same time, GM has tried, where possible, to make "modest reductions" in per-unit incentives, the spokesman said. Ford Motor Co. declined comment.

In March and early April, seven Japanese automakers raised prices on 10 brands of cars sold in the United States. The hikes (by makes) ranged from $100 to $1,790 and averaged $441, or 2.8 percent, an *Automotive News* analysis found.

Raising car prices were Toyota Motor Sales U.S.A. Inc. (Toyota and Lexus); American Honda Motor Co. Inc. (Honda and Acura); Nissan Motor Corp. in U.S.A. (Nissan and Infiniti); Mitsubishi Motor Sales of America Inc.; Mazda Motor of America Inc.; Subaru of America Inc.; and American Suzuki Motor Corp.

Most of the importers blamed their hikes on the appreciation of the yen against the dollar. But many observers say the increases were a response to the deepening trade friction between the United States and Japan.

Lutz rejected the notion that the Japanese price hikes were designed to give American producers "a break." "It's because they are having to come to terms with their own profitability problems, particularly in this market," he asserted.

Lutz said the Big 3 can recoup market share as the Japanese deal with the economic pressures: "U.S. producers over the next three or four years might claw somewhere between one and three percent (percentage points) a year back from the Japanese," he predicted.

The Japanese share of the U.S. car and light-truck market in 1992 is down from one year ago. The Japanese makers held 24.0 percent of the market through May 20, 1992. Their share of the U.S. vehicle market for the first five months of 1991 was 25.3 percent.

The Japanese share in the United States will continue to erode because of the improved quality of domestic vehicles, Lutz said.

"When you have a bad quality reputation, it takes you about five years to overcome that problem," Lutz said of domestic producers. "We're 3½ years into that five-year process. The truth is gradually beginning to spread down to the mass of buyers that you can now buy an American car with confidence."

At the same time, U.S. makers are developing cars comparable to Japanese vehicles in ride, handling and "the way the whole car looks, feels and sounds," he said.

Lutz also said that Japan's current economic downturn will have little effect on the Big 3's effort to penetrate that market.

Said Lutz, "The penetration of the Japanese market is so difficult and that task is so long-term in nature that I don't see the current Japanese recession having much of an effect on it one way or the other."

Ford touts 'little things' for women

ARLENA SAWYERS
Staff Reporter

When the Women's Marketing Committee at Ford Motor Co. examined the 1993 Mercury Villager minivan, members found that high heels were likely to catch in the floor track on which the seat moves backward or forward.

So the engineers covered the track with a floor mat that must be picked up before the seat is moved.

"The little things have a lot to do with customer satisfaction," said Flora Brooks, a Ford systems and applications engineer.

Brooks was among the group of female Ford executives and engineers — some of whom are members of the 10-year-old committee — who gathered in Detroit last week to reiterate the company's commitment to women buyers.

The committee makes recommendations about the design and development of cars and light trucks, participates in static and driving evaluation of future products and is working with dealers to improve the vehicle sales and service experience for women.

Ford believes that women buyers are particularly interested in features that add safety, security, comfort and convenience.

Ford believes women will be particularly attracted to the Villager, which debuts June 15, and the redesigned 1993 Ford Probe, which arrives July 9.

Bobbie Koehler-Gaunt, Ford director of marketing research, said Ford expects half of the Villager buyers to be women. The company believes women will purchase 50 percent of the 1993 Probes, up from 40 percent for the 1992 model.

Although Ford says that safety is high on women buyers' list of concerns, the 1993 Villager does not have an airbag. The 1993 Probe has a driver-side airbag as standard equipment.

Mary Ann Wright, Ford model planning analyst, said the company originally planned to hold off on adding airbag to the Villager until 1996, but because of consumer demand, a driver-side airbag will be added in the 1994 model year.

She stressed that the Villager does have anti-lock brakes.

"We're not estimating any loss of sales" because of the missing airbag, she said. "People feel safe in the vehicle." AN

Overtime high after holiday

ANNE E. WRIGHT
Chief Statistician

With 20 Big 3 plants working daily or Saturday overtime, car and truck production in the United States last week rose 20.2 percent over the year-ago week, which also included Memorial Day.

Last year, three plants were down for model changeover, and three were idle due to slow sales and high inventories.

Car production in the United States was estimated at 112,376 last week, 17.2 percent below the prior five-day week and 25.3 percent above the year-ago week.

Year-to-date U.S. car production is 2,397,889, up 7.2 percent over the same point last year.

U.S. truck production was estimated at 75,503 last week, a drop of 18.4 percent from the prior week and an increase of 13.4 percent over the year-ago week.

U.S. truck production so far this year is 1,666,049, up 24.6 percent from 1991.

In Canada, car producers estimated output at 23,800 last week, up 13.4 percent over the prior week, which included the Victoria Day holiday. Output was down 9.2 percent from last year.

So far in 1992, Canadian car production is 432,505, down 4.8 from the same point in 1991.

Truck production in Canada was estimated at 19,913 last week, 13.4 percent above the prior week and 4.4 percent above the same week last year.

Year-to-date truck production in Canada is 454,402, up 32.1 percent from the 1991 period.

The estimated daily-build rate of cars and trucks produced in the United States and Canada was 57,898 last week, up 8.5 percent over the prior week and 14.9 percent more than in 1991.

Seven of Chrysler's U.S. assembly plants are scheduled for overtime this week. The Dodge City (Warren, Mich.); St. Louis (No. 2); Jefferson North (Detroit); and Sterling Heights, Mich., facilities worked Saturday overtime last week and will work daily overtime this week. The Belvidere, Ill.; Newark, Del.; and Toledo, Ohio, plants are scheduled for daily overtime this week.

The company ran Saturday overtime at the Windsor, Ontario; and Pillette Road (Windsor, Ontario) truck plants last week.

GM worked Saturday overtime last week at truck plants in Oshawa, Ontario; Scarborough, Ontario; Detroit; Moraine, Ohio; and Janesville, Wis., and at car plants in Bowling Green, Ky.; Oklahoma City; and Van Nuys, Calif.

Ford Motor Co. scheduled daily overtime last week at the Atlanta; Chicago; and St. Thomas, Ontario, car plants and at the Twin Cities, (St. Paul, Minn.); Edison, N.J.; Louisville, Ky.; and St. Louis truck plants.

The Kansas City, Mo., car and truck facilities worked daily overtime last week. The truck line also worked Saturday. AN

Daihatsu names new president

TOKYO — Daihatsu Motor Co. Ltd. Vice President Takashi Toyczumi will be named president and chief executive of the company at the general stockholders meeting June 26.

A Daihatsu spokesman confirmed that Toyozumi will replace Jiro Osuga, who will become the company's next chairman. The change has been widely expected.

Current chairman Tomonaru Eguchi, 72, will stay on as an "executive adviser," the spokesman said.

Toyozumi, 63, has been vice president of Daihatsu since June 1988. He joined the company in 1986 following a 32-year career at Toyota Motor Corp., which owns 14.7 percent of Daihatsu.

Osuga, 67, has been president since June 1988.

— Richard Johnson

McNamara says he's innocent

NEW YORK — Long Island car dealer and real-estate developer John McNamara pleaded innocent to federal fraud and racketeering charges stemming from an alleged scam that cheated General Motors out of hundreds of millions of dollars.

A six-count indictment filed last month in Brooklyn federal court charged that since the early 1980s McNamara received some $6 billion in loans from the automaker's credit division to finance

Big 3 stage sales rally as Japanese dip 12%

Domestic share up 3 points in May

PHIL FRAME
Staff Reporter

Car and truck sales in May pointed to a Big 3 recovery although the overall market slumped because of a decline in the deliveries of Japanese vehicles.

Big 3 sales rose 4.1 percent; U.S. sales of Japanese cars and trucks plunged 12.7 percent. The Big 3 gained 3.2 points of market share; the Japanese lost the same amount.

Overall sales in May totaled 1,152,231 units, down 4,693 or 0.4 percent from last year. Stronger sales of trucks couldn't quite offset a decline in car sales, and May became the first month this year with lower sales than in 1991.

"We're still not doing that well," said analyst Ronald Glantz, San Francisco-based senior vice president of Dean Witter Reynolds Inc.

"April marked the end of the recession (for vehicle manufacturers), and May confirmed that April wasn't a statistical fluke."

But the selling rate in May still was lower than car and truck sales in 1991, Glantz noted. *Automotive News* calculates the May seasonally adjusted annual selling rate at 12.26 million units, while actual sales in 1991 were 12.33 million.

Tom Webb, chief economist for the National Automobile Dealers Association, said he looks for sales to improve through the rest of the year, with the industry reaching 13.3 million units for 1992.

"I would look for the fourth quarter to be real strong," Webb said. "I think the sales recovery will last, that's fair to say."

Chrysler Corp. sales climbed 11.7 percent in May, and Ford Motor Co. rose 7.4 percent. General Motors was down 0.4 percent.

Of the 12 Japanese marques, the seven largest declined in May, and the smallest five — Subaru, Lexus, Infiniti, Suzuki and Daihatsu — improved.

The Japanese had a bad month at home, too. The market in Japan was down 14.4 percent from May 1991, the 13th straight decline. (See story, Page 49.)

Sport coupe to join Fiat lineup

As part of a strategy to enlarge niche markets, Italy's Fiat Auto is expected to add this new sport coupe to its lineup in 1993. Designed in-house, the Europe-only 2+2 likely will be powered by a 16-valve, 2.0-liter four-cylinder in both normally aspirated and turbo versions. See story and spyder stablemate on Page 3.

Layoffs boost Big 3 costs for benefits

KATHY JACKSON
Staff Reporter

Ford Motor Co. and Chrysler Corp. paid out nearly as much in hourly benefits as they did in hourly wages last year.

The reason: the 1990 UAW contract that guarantees the salaries of workers during plant shutdowns, combined with massive layoffs during the 1991 sales slump. Money for people not working is considered a benefit, not wages.

Chrysler had to pay about $20 in benefits for each hour worked by its hourly workers.

The contract also beefed up pensions for some retirees by as much a 26 percent, another significant hike to the benefits payout.

The benefits provide a huge com-

'93 Firebird blends the old, the new

JACK KEEBLER
Staff Reporter

Pontiac's 1993 Firebird will appeal to buyers looking for an old car refined or a refined new car.

The new Firebird will have a completely re-engineered body, new engine and transmissions, interior and suspension system.

Still, one of Firebird's top engineers describes it as "a refinement."

The seeming contradiction stems from officials' efforts to maintain enough continuity in design to retain longtime Firebird fans, but create enough newness to attract new ones.

About 90 percent of the overall part numbers and 100 percent of the body parts of the 1993 Firebird are new, according to the engineering official.

The Firebird, its F-car sister Chevrolet Camaro and Ford Mustang are the last of the "pony cars." Originally, they had powerful V-8s. They still have rear-drive in a two-door configuration.

Chrysler partially succeeded in gaining a piece of that market with the Plymouth Laser and Dodge Daytona front-drive models.

Importers have also succeeded in capturing a part of

Cost is king now for GM supplier business

AL FLEMING and MARY CONNELLY
Automotive News

GM delays Big 3 supplier pact > 45

General Motors demanded a new relationship with suppliers last week that makes price the focus of the price-service-quality trinity.

Ignacio Lopez, GM's new vice president for worldwide purchasing, announced his new policies Tuesday to top executives of 600 supplier firms and 200 GM purchasing people at GM's design auditorium in Warren, Mich. He gave the message to GM engineers the day before.

He said existing contracts are open to new bids, stunning the vendors. And he said GM part divisions like Delco Remy must compete with non-union shops for contracts.

The goal, he said, is to slash GM parts and materials costs substantially. He hinted that "substantial" meant more than the 7 percent price cut GM began demanding last year. At the same time, Lopez pledged to help suppliers cut their own costs by sharing expertise and advance knowledge.

The carrot he dangled was the opportunity to sell products to GM worldwide under long-term contracts.

"The meeting was a positioning statement. It was not specific on how-tos," said a supplier executive who was there. Like several others in this story, he would not be quoted by name because he didn't want to risk offending his customer.

Lopez' basic theme was that to regain market share and become competitive GM must cut prices, and to cut prices it must work more closely with suppliers.

"He made it clear he will roll up his sleeves and come out to supplier plants with his team to look at how to reduce costs," said another supplier executive.

Lopez told the audience he has visited 112

JIM DUNNE/POPULAR MECHANICS

Chevrolet overhauls little hauler

For the 1994 model year, Chevrolet will give its compact S10 pickup and Blazer sport-utility their first major styling change since their 1983 debut. This prototype shows a sloping hood and front fenders similar to designs of Toyota and Nissan trucks. Powerplant choices will include a 4.3-liter V-6 that makes around 200 horsepower.

vehicles that did not exist and kept more than $400 million for his own use.

McNamara allegedly used an Indianapolis office in the scam to defraud General Motors Acceptance Corp. Prosecutors have said he used the money to prop up his personal investments in real estate, gold mines and other businesses.

McNamara, accompanied by his lawyer, Allen Schwartz, entered his plea Tuesday at a hearing before U.S. District Judge Edward Korman of Brooklyn federal court.

McNamara remains free on a $300 million personal recognizance bond. He faces 20 years in prison and millions of dollars in fines, if convicted, prosecutors said.

McNamara agreed in May to surrender some $400 million in assets to the federal government for liquidation.

Fuji trims corporate losses

TOKYO — Fuji Heavy Industries, the maker of Subaru vehicles, said last week its consolidated pretax loss narrowed to $237 million in the fiscal year 1991-92 that ended March 31 from $695 million a year earlier. Sales rose 27 percent to $8.2 billion.

Fuji said the sluggish world economy and its unprofitable American operation continued to hurt earnings.

President Isamu Kawai predicted the company would again be unprofitable in the current fiscal year, but said he expects Subaru's joint-venture in Indiana to return to profitability.

— Mary Ann Maskery

Canadian sales dip 15% in May

TORONTO — Recovery slipped further away from the Canadian auto industry in May. Sales of cars and trucks dropped 15.0 percent for the month. Through May, sales stand 7.3 percent below year-ago levels.

Each of the Big 3 lost sales, paced by General Motors' 22.1 percent decline. The Big 3's combined car and truck sales dropped 14.6 percent.

Chrysler's trucks, which rose 8.5 percent, provided one bright spot. Chrysler minivans enjoyed their best May ever.

Overall sales of imported and domestic cars dropped 17.03 percent for the month. Trucks slipped 10.21 percent.

Mazda recalls MPV minivans

IRVINE, Calif. — Mazda Motor of America Inc. is recalling 95,074 1990 and 1991 MPV minivans for inspection of the rear brake shoe linings.

On certain 1990 and 1991 MPV minivans manufactured between July 1989 and July 1990, the characteristics of the rear brake shoe linings can change over time. As the brakes wear, friction can increase, possibly causing the rear-wheel anti-lock-brake system to activate prematurely.

GM adds to Hogan's duties

DETROIT — Responsibility for handling General Motors' internal business information systems has been added to the duties of Mark Hogan, head of planning for North American Operations, the company announced.

Hogan, who assumed the new duties June 1, also received a new title: executive director of NAO planning and corporate information management.

Hogan continues to report to GM President Jack Smith on planning matters, but now also will report to Vice Chairman Robert Schultz on information management. Schultz oversees GM Hughes Electronics Corp. and Electronic Data Systems Corp.

Hogan is responsible for integrating GM's computing and communications infrastructure with the goal of creating common internal business information systems, Smith and Schultz said in a statement.

— Phil Frame

Caterpillar faces slowdown

EAST PEORIA, Ill. — UAW employees are gearing for a possible work slowdown at Caterpillar Inc., a UAW source confirmed.

The union has been hoping Caterpillar would agree to changes in its final contract offer implemented in April when it threatened to hire replacement workers. So far, it has shown no inclination to offer anything new.

When the 163-day strike ended, the union agreed to return to work under the offer while negotiations continued.

— The Associated Press

Ford expands shifter recall

DEARBORN, Mich. — Ford Motor Co. has added about 115,000 of its 1989 Aerostars, 1990 Bronco IIs and 1991 Rangers to a transmission recall announced in March.

That recall covered about 755,700 1990 Rangers, 1990 and 1991 Aerostars and 1991 Explorers.

All the vehicles are equipped with the A4LD automatic transmission. Ford said the park mechanism may not take hold when the shift selector is placed in the park position, making it possible for the vehicle to roll.

GM expands dealer satellite

WASHINGTON — General Motors has hooked up the 5,000th dealer to its private satellite communications network.

The Pulsat network allows two-way data and one-way video transmissions between GM corporate headquarters and dealerships.

GM expects to equip all 9,000 of its dealerships with Pulsat by the end of the year.

— Gwendolyn Zonghetti

briefly

Big 3 may link for auto safety

The next one-for-all, all-for-one Big 3 consortium will likely be on auto safety. "There is discussion underway right now," said a high-ranking engineer. "I don't know exactly when it will be launched. But it will be sooner than you think." On Tuesday, the Big 3 announce a ninth consortium, on emissions, and USCAR, their umbrella to administer all their joint efforts.

BIG 3 safety consortium

BUYERS WANTED — Wall Street rainmakers think they can make a buck by selling off **General Motors'** component operations. The head of a major automotive supplier says several investment banks have approached him, offering to put together a deal. The Wall Streeters are making the pitch without GM's support. Says the supplier: I would take on a work force that makes over $30 an hour with guaranteed employment, in a plant sitting on a pile of PCBs. How can you refuse a deal like that?

M. LE PRESIDENT? Jacques Calvet, the outspoken Japan-bashing chairman of **PSA Peugeot Citroen**, is considering running for the French presidency in 1993. Last week Calvet said he might make an election bid even if his chances are slim. He'll have a Yankee track record to follow. This fall, former **General Motors** director Ross Perot will be on some U.S. states' presidential ballots.

MAYBE MANANA — It looks like ASC Inc. won't be a boutique carmaker in Spain this year. Earlier in 1992, the Michigan-based convertible expert was talking excitedly with **Seat SA, Volkswagen's** Spanish subsidiary, about building a micro-plant to turn out 25,000 to 50,000 new cars. Insiders say the idea is all but dead now. The two couldn't agree on who would pay for what.

MIRED IN THE NEWS — Two men are busted in a Chattanooga beer joint for a cocaine deal. Yawn. They work as salesmen at Capital **Toyota.** Bright idea! The TV news tease is along the lines of: "A local car dealer is selling more than cars." Dealer Bob McKamey calls the three local TV stations, telling them the dealership is not involved. The police chief calls. But all the stories play up the dealership, and all day Friday the "Is it true?" calls trickle in. "I told my wife that Friday night I had never been so tired, so worn out, from butting my head against the wall," McKamey said. The cloud of publicity did have a silver lining: Friday and Saturday were his two best sales days of the year. "But," McKamey said, "I'd rather keep the good name."

CALL IT A LEXAIR — The numbers would be tiny if **Toyota Motor Corp.** goes ahead with a luxury convertible, perhaps based on the **Lexus** SC400. "It would be a super small amount of cars, maybe 100, or 500 or 1,000," said a spokesman. A press that uses water to produce highly-curved sheet metal at low cost would be the key, he said.

NAME GAMES — The *Toronto Star* reports: "The **(Nissan)** Maxima has attained cult status among drug dealers for its style, ride and the sheer magic of its name. 'It says Maximum respect,' says one observer, although there are other interpretations as well."

Chrysler eyes U.S. plant as second source for LH

MARY CONNELLY
Staff Reporter

Chrysler Corp. is studying the feasibility of building its trio of new mid-sized sedans in a second assembly plant, according to sources monitoring the situation.

Chrysler is scheduled to begin building the 1993 Dodge Intrepid, Eagle Vision and Chrysler Concorde June 22 at its Bramalea, Ontario, assembly plant. Canadian Auto Worker employees at the plant have authorized implementation of a three-shift/three-crew operation at the plant if market demand for the cars is strong.

But Chrysler would abandon the three-crew proposal at Bramalea if it decides to use Newark.

Sources say Chrysler now is studying the feasibility of building the sedans beginning in the 1995 model year at its Newark, Del., assembly plant. Newark now builds the Dodge Spirit, Plymouth Acclaim and Chrysler LeBaron sedans and the Chrysler LeBaron coupe and convertible.

Asked about the possibility of adding a second plant for the new sedans, a Chrysler spokesman said, "We're always looking at many possibilities at all of our plants. Beyond that we have no further comment."

Sources say Chrysler is considering a second plant to ensure vehicle build quality and to assure adequate production capacity.

Bramalea can produce 180,000 to 200,000 units annually with two shifts. A third shift would permit annual production of 300,000 units. But retooling Newark would give Chrysler an estimated 200,000 additional units annually.

It is not clear how feasible it would be to convert Newark. Bramalea uses more robots than any plant in Chrysler's manufacturing system and also employs some innovative manufacturing techniques. In addition, the Canadian plant has its own stamping plant.

But Spirit/Acclaim/LeBaron sedans built at Newark have met quality targets and the plant operates under a flexible modern operating labor agreement.

GM A-body plant tops transplant quality

LINDSAY CHAPPELL
Staff Reporter

A 13-year-old General Motors factory edged out the Japanese transplants to become the top-rated plant in North America.

An industry ranking by J.D. Power & Associates of Agoura Hills, Calif., dubbed GM's Buick Century-Oldsmobile Ciera plant in Oklahoma City, Okla., No. 1 for building quality cars. But at GM's heels were all three of Toyota Motor Corp.'s North American assembly plants.

Toyota's 3-year-old Corolla plant in Cambridge, Ontario, and its 4-year-old Camry plant in Georgetown, Ky., finished second and third on the list, respectively. New United Motor Manufacturing Inc., a 50-50 Toyota-GM joint venture in Fremont, Calif., placed fourth. Last year, the Oklahoma City plant ranked fourth behind Toyota's operations in Canada and Kentucky and a GM plant in Ramos Arizpe, Mexico.

Half of the top 10 North American factories this year belong to Japanese automakers. Subaru-Isuzu Automotive Inc. of Lafayette, Ind., builder of the Subaru Legacy, ranked fifth. Honda of America Manufacturing Inc. in Marysville, Ohio, finished ninth for the Honda Accord.

GM's 2-year-old Saturn plant in Spring Hill, Tenn., also made it into the top 10 this year.

The rankings are based on J.D. Power's Initial Quality Study, released in late May. J.D. Power uses vehicle identification numbers to trace vehicles to the factories where they were built. In that study, the Cutlass Ciera placed fourth, behind three Japanese imports, with 70 reported problems per 100 cars. The Century tied for ninth place.

1992 PLANT QUALITY LEADERS

Problems per 100 cars

Chrysler hosts get-together for labs

MARY CONNELLY
Staff Reporter

Chrysler Corp. this week will host a two-day technology exchange with many of the nation's leading non-automotive laboratories and research centers.

The June 8-9 meeting at the new Chrysler Technology Center in Auburn Hills, Mich., is designed as a get-acquainted session which could result in future research and technology ventures among the automotive industry and federally funded labs and research and development centers.

Some 1,000 Chrysler scientists and engineers will meet with representatives from 300 federally supported laboratories and industrial research and development centers to see how new technologies might apply to the auto industry. Thirty university engineering schools from across the nation also will participate.

"We tend to think of government as something that spews out regulations we have to meet," said Thomas Moore, who organized the Chrysler Technology Exposition. "We haven't viewed it as an intellectual property source. We believe there are new opportunities for cooperation."

> ❛Part of the problem is we don't know what we are looking for because we don't know what they have.❜
>
> **THOMAS MOORE**
> TECHNICAL AFFAIRS MANAGER

Moore is general manager of Liberty and technical affairs for Chrysler. Liberty is Chrysler's advanced vehicle concept program.

The collapse of the Soviet Bloc, easing of international tensions and prospect of defense budget cuts have prompted national labs to seek commercial applications for technological developments.

Chrysler already has compiled a technological wish list for the labs to review.

Key priorities are reduced vehicle emissions and improved fuel economy, Moore said. But the lists range from items such as heated windshield wiper blades to computer programs for analyzing aerodynamic characteristics.

"Part of the problem is we don't know what we are looking for because we don't know what they have," Moore said.

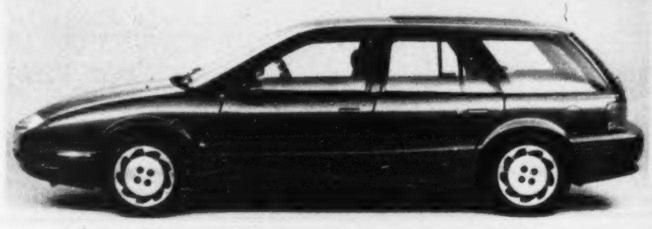
For example, a NASA development intended to address the problem of de-icing aircraft wings could be a boon to the auto industry, Moore said.

"NASA has a proposal to put electrical power devices on aircraft wings. The devices generate electromagnetic shock waves that shatter the ice rather than the current practice of melting ice by chemicals," Moore said. "This would be one way for us to defog the back window of vehicles without using the power now required."

Suppliers and representatives from General Motors and Ford Motor Co. also will attend.

Moore said he conceived the event after attending a symposium in January at which GM hosted 11 national laboratories.

Moore expanded the concept by adding to the number of labs and r&d centers, including NASA and aerospace labs, inviting suppliers and creating the wish list.



Saturn dealers will have two versions of a station wagon to sell this fall.

Saturn cuts base wagon from 1993 lineup plans

PHIL FRAME
Staff Reporter

Saturn Corp. has dropped plans for a stripped-down wagon model in favor of offering just two versions of the wagon that will debut in the 1993 model year.

Saturn decided to market:

- A single-overhead-camshaft, eight-valve, four-cylinder wagon with the trim of the current SL1 sedan
- A double-overhead-camshaft, 16-valve, four-cylinder wagon with the trim of the current SL2 sedan.

The SW1 and SW2 wagons are scheduled to be available beginning Oct. 1.

Saturn had planned a stripped-down wagon model, which would have been called just SW. It would have had the same sohc engine as the SW1, but the trim level of the current SL base model sedan.

The company decided against the stripped wagon because of low sales potential, said a Saturn source familiar with the plans.

Saturn anticipated demand of only 3,100 to 5,200 cars per year for that model: about one-fifth of planned wagon production.

Saturn still plans to build about 271,920 cars during the 1993 model year, with the 4,000 units that might have been SW wagons being spread among the rest of the company's line.

Saturn plans to introduce one other model besides the two new wagons — a new low-end coupe with the front styling of the current sedan and the doors and rear of the current coupe.

That would stretch Saturn's line to three sedans, two coupes and two wagons for the 1993 model year.

The company's next new models are expected to be a pair of two-door notchbacks for the 1996 model year. The notchbacks will look like the sedans, which are due to be restyled for the 1994 model year. The coupes will retain a separate appearance.

U.N. sanctions quash hopes for Yugo parts

JIM HENRY
Staff Reporter

NEW YORK — The international community has cut Yugoslavia off from the rest of the world, and that leaves Yugo America Inc. more of an orphan than ever.

On May 30, the United Nations imposed a strict trade and travel embargo against the Yugoslavian federation formed by Serbia and Montenegro. The Yugo factory is in Serbia. The United Nations and the U.S. government blame Serbia for much of the ethnic violence in the former Yugoslavia. The embargo bans all commercial and financial links to the outside world, except humanitarian aid.

"After these sanctions, everything is in a new light. I don't have any information," said Ilija Pavlovic, a director and executive vice president for Yugo America, which in April filed under Chapter 7 of the Federal Bankruptcy Act.

"Everything is new after last Saturday," he said last week in a telephone interview from his home in New Jersey.

So even if Yugo's parent companies were willing and able — and so far, they haven't indicated whether they're either willing or able — it would be illegal for Genex and Zavodi Crvena Zastava to ship funds and/or parts to the United States to support their U.S. subsidiary.

"I have to assume the sanctions kill the chance of doing anything," said Bruce Buechler, Yugo's attorney.

Not that Yugo's prospects were much better before the sanctions. After Yugo filed for Chapter 7 liquidation, the company listed about $600,000 in assets against $15.2 million in liabilities.

> ❛I have to assume the sanctions kill the chance of doing anything.❜
>
> **BRUCE BUECHLER**
> YUGO BANKRUPTCY ATTORNEY

William J. Hunt, the trustee who is liquidating Yugo America for the Bankruptcy Court, warned creditors in a letter dated May 13 that "at this time there appear to be no assets available from which payment may be made to unsecured creditors."

Yugo's sole secured creditor, whose IOUs are backed up by a lien against Yugos' assets, was Yugoslavian bank Jugobanka.

Jugobanka loaned Yugo $5.2 million in 1990 and another $617,000 in 1991.

Before the Chapter 7 filing, the bank had already taken possession of about $895,000 worth of Yugo parts. The Bankruptcy Court filing shows Yugo had little else.

Hunt, the trustee, filed a notice May 29 that he intends to legally abandon Yugo's office furniture, office equipment and computer equipment because the bank has a lien against them — and because selling them would be more trouble than it's worth.

Yugo entered the U.S. market in 1985 and had its best year in 1987 when sales peaked at 48,812 cars. But management squabbles and poor quality killed sales and plunged the importer into bankruptcy, from which it emerged last year but was unable to recover.

BENEFITS

Total payouts rival hourly wage levels

continued from PAGE 1

petitive advantage to Japanese transplants, which have virtually no layoffs or pensioners.

"Most people would believe that wages are pushing up the costs," said General Motors spokesman John Maciarz, "but it's the benefits."

Hourly labor costs are calculated by taking the total labor cost — wages plus benefits — and dividing that number by actual hours worked.

As workers spend more time on the job, the companies' hourly benefit cost goes down.

None of the Big 3 would specify how many hours were worked in 1991 compared to 1990, but the numbers tell the story.

In 1991, GM's hourly wage rose just 24 cents over 1990 wages to $22.47, but its benefits rose $3.06 an hour to $12.13. That calculation for benefits is GM's cost for each hour actually worked. It is not the same as the benefits the individual worker actually receives.

Ford's hourly wage rate rose 66 cents to $19.10, while its benefits rate soared $3.85 to $17.97.

Chrysler would not break down its figures. Its hourly labor costs jumped by $5.51 to $41.12, according to the company's annual report.

Automotive News estimates the cost of Chrysler's 1991 hourly benefits at $20.34, up from $15.28 the previous year.

"The temporary layoffs were substantial in '91 compared to '90," said Ford spokesman Dick Routh. "I would guess we probably spent a bunch" in job security benefits last year.

Under the 1990 contract, workers receive 95 percent of their base pay for the first 36 weeks of layoff. After the 36 weeks, employees are placed in a Job Opportunity Bank Security program at full pay and benefits.

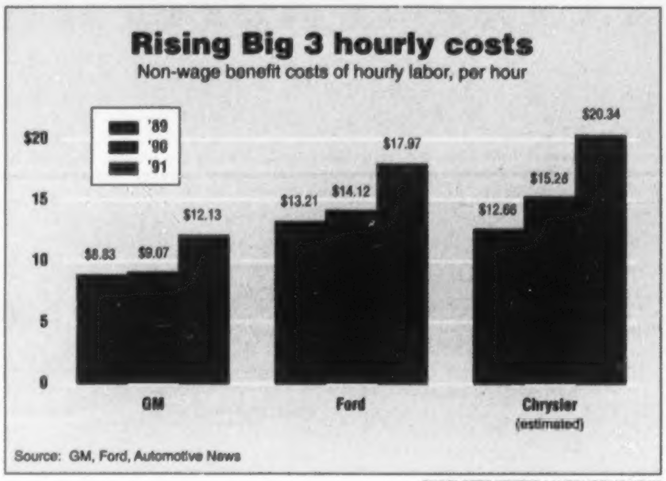
The previous UAW contract capped layoff benefits, based on seniority.

Plants were down almost as much as they were up last year.

During some weeks in February and March, Chrysler didn't have a single plant operating. Through the first quarter of last year, an industrywide average of 13 plants were closed per week in the United States.

Pension improvements also were costly.

Under the new contract, retirees over age 62 received from $37.50 to $123 more in their monthly paychecks, depending on the date of retirement.



Source: GM, Ford, Automotive News

CHARLOTTE WINTER / AUTOMOTIVE NEWS

The monthly 30-and-out benefit for retirees under age 62 was increased by $300 to $1,800.

Ford's pension expense totaled $643 million in 1991, compared to $351 million during 1990.

GM's pension expense was $1.5 billion last year, compared to $369 million the year before. Chrysler's expenses for pensions were $784 million and $521 million for the two years.

Chrysler's hourly benefits rates are higher than either Ford's or GM's not only because of plant slowdowns, but because the company has a higher ratio of retirees to active workers than its competitors:

- Chrysler: 69,276 active U.S. hourly workers and 91,060 hourly retirees
- Ford: 102,800 active and 83,300 retirees
- GM: 258,700 active and 254,500 retirees.

Several Wall Street analysts criticized the Big 3 for agreeing to a contract that limits their ability to control labor costs, but the income security budgets established by the Big 3 for the three-year contract so far are holding up.

Maciarz said that through the end of March, GM had spent $1.6 billion of the $3.35 billion the company budgeted for income security during the three years of the contract, which ends in September 1993; through Dec. 31, 1991, Chrysler had spent $225 million of its $660 million budget; and through the end of April, Ford had spent $350 million of its $1.6 billion budget.

Last year, the UAW Ford Department also gave Ford a short reprieve from contributing to the Supplemental Unemployment Benefits Fund, which pays laid off workers.

Companies contribute to the fund weekly, but since the union had a $178.9 million dollar surplus in the Ford Supplemental Unemployment Benefits Fund after the 1987 contract, the union allowed Ford to halt contributions until the fund dipped to $25 million.

"The union did show some compassion for the situation we were in by letting us tap that fund," Routh said. "It helped us weather the recession and helped us with our cash position."

Union leaders say they have an answer to the Big 3's high benefits costs: Keep work in-house instead of paying workers to do nothing.

Since the 1990 contract began, Ford has brought about 1,000 new jobs into Ford plants, Routh says.

GM's Maciarz says GM has created about as many parts-making jobs as it has outsourced during the new contract.

"Our intention with the 1990 contract was to grow the business, but the business environment has not allowed that," Maciarz said.

Will the income security funds hold up through September 1993, when the contract expires?

"Your guess is as good as mine," Maciarz said. "It's probably too close to call at this point; it depends on what the market is like the next 18 months."

Meanwhile, when GM imposes a company-wide two-week shutdown the last two weeks in July, salaried employees must use vacation time. Hourly workers go on layoff, preserve their vacation time and get 95 percent or 100 percent of their pay. ■

GM to sell stake in robotics business

PHIL FRAME
Staff Reporter

General Motors will leave the robotics business with unrealized hopes, ending a 10-year joint venture with a Japanese company.

GM last week said it was selling its 50 percent interest in GMFanuc Robotics Corp., based in Auburn Hills, Mich. The interest is being sold to the other partner in the company, FANUC Ltd. of Japan.

GM did not disclose the price. The deal must be approved by the U.S. and Japanese governments.

GM said the sale is part of a corporate effort to divest businesses that are not part of the company's core car and truck operations.

William Hoglund, GM executive vice president and chief financial officer, said GMFanuc likely will continue to be GM's leading source of robots, adding that GM will still be involved with product development efforts.

The change in ownership will not change day-to-day operations, the company's 670 employees, or customer or supplier relationships, said Seiuemon Inaba, president and chief executive officer of FANUC and chairman of GMFanuc.

GM entered the venture in 1982, expecting that the U.S. robotics market would grow from $155 million that year to $2 billion in 1990. But the market was only about $500 million last year, said Cathryn Rybicki, GMFanuc chief financial officer.

GM also thought it would use 14,000 robots in its manufacturing plants by 1990, but it has only about 8,000 today, a GM spokesman said.

"The growth expectations were not fully realized," Rybicki said. "The industry grew explosively in the early 1980s, but that pace slowed. The growth has been stable and steady over the past five years."

She said GMFanuc "has been very profitable" over the years, but the company does not have to report its profits separate from its parent companies. GMFanuc's sales were $250 million in 1991.

GMFanuc manufactures computer numerical controls for machine tools, industrial robots, wire-cut electric discharge machines and automated plastic injection molding machines. The company has operations in the North America and Europe. ■

Kia still expects '93 start in U.S.

KRISTINE STIVEN BREESE and OLES GADACZ
Automotive News

The head of Kia North America said last week that the Korean carmaker is still committed to launching in the United States in 1993, although the first product probably won't come out until the fall.

"That's a little later than some of our early internal reports had forecast, but we're still basically on track with the original timetable," said Greg Warner, executive vice president and chief operating officer. Kia announced late last year that it planned to have a U.S. sales network running by mid-1993.

Warner, who was appointed in January, says the company has been busy ironing out details for its massive undertaking.

The company will start with a subcompact four-cylinder sedan — the Sephia — and follow with a compact sport-utility a few months later.

Said Warner: "It was important to me to keep the product launches close together, and it looks like we'll be able to do it."

Meanwhile, Kim Seung-Ahn, Kia's senior managing director for overseas sales, said no cars will be shipped before their time.

"The factory has done everything and the guys are ready," Kim said in Seoul last week.

"They're pushing me to get started, but I'll have the last word . . . I'm conservative. Quality-wise, we should be 100 percent successful and confident."

Kim vowed that Kia would not fall victim to the mistakes that have marred Hyundai Motor Co.'s U.S. experience.

"Quality and price are baseline factors," he said. "They're not competitive factors. Today, everybody is delivering good quality and good price."

The U.S. launch, he admits, might be rolled back "one, two or maybe three months" depending on how the Sephia does in its Korean debut. The car, which is scheduled to go into production this month, will go on sale in Korea in August.

If all goes well, the first Sephias will be shipped to the United States in early 1993, Kim said.

Kim said U.S. dealership applications are still being screened, and that no final decision has yet been made on the final number.

He also said the company has not yet decided on whether to launch on both coasts simultaneously, or focus on a single region.

"If we lose this round, we have no way to go up the ladder to higher models," Kim said.

"We Koreans have a saying: Before crossing a stone bridge, tap the stones to check the foundation. I'm telling my guys to go out and build an iron bridge and then tap the iron." ■

SALES

Big 3 rally in May; Japanese dip 12%

continued from PAGE 1

price hikes," Glantz said. March increases averaging 2.8 percent reached the market last month as inventory turned.

Also, the Japanese are weak in the market segments that grew in May, Glantz said. "The great strides were in full-sized pickups, compact sport-utilities and minivans."

Light trucks were May's stars. Ford's F-series pickups led all models in May with 41,413 sales, followed by 38,366 for Chevrolet's C/K pickups.

Ford's Taurus was the top car. The Honda Accord (No. 3) and Toyota Camry (No. 9) were the only foreign-badged vehicles among May's top 10 cars and trucks.

Ford and Chrysler improved their car-truck market shares while GM's was unchanged.

At Ford, sales rose for every line except the full-sized Bronco sport-utility. Chrysler lost nearly a full point of car share, but gained 4.6 points of truck share on the strength of minivans, the Cherokee and the new Grand Cherokee.

GM's trucks lost more than two points of share despite a sales increase. Conversely, its cars grabbed an additional 1.2 market share points despite a sales decline.

May's results reinforced Ford Division's lead over Chevrolet for the top spot in both car and truck sales. Ford is clearly moving away on both fronts.

> Ford increased its lead over Chevy in car and truck sales.

The divisions were neck-and-neck through the first five months of 1991, with Ford Division leading by a scant 3,000 units overall.

Through May 1992, Ford Division held a 160,000-unit lead — 49,000 in cars and 111,000 in trucks. Overall, Ford Division gained 2.1 points of market share through May; Chevrolet lost 0.9 points.

Chevrolet dealers have complained that GM is neglecting the division's product line while pouring money into Saturn. It has been a bitter pill for Chevrolet dealers because they claim they were promised the Saturn when the car was proposed in the early 1980s.

"We know some Chevrolet dealers are concerned that Saturn's success is coming at their expense," GM President Jack Smith told *Automotive News*. "We understand their concerns, but our facts don't support the thesis that Chevrolet is losing to Saturn. The Chevrolet issue is separate, and we're working to return Chevy to leadership."

Smith said the latest figures show that 70 percent of Saturn's business nationwide is coming from customers who say they wouldn't have purchased a GM product as a second choice.

"Saturn is off to a very strong start in fulfilling its dual missions of conquesting the small-car market and transferring its results throughout all of GM," Smith said.

On a percentage basis, Saturn scored the biggest May-to-May increase of any marque, selling 2½ times as many cars as last year. Jaguar doubled its sales on the strength of a new lease program. AN

Japan sales continue down, off 14 percent

MARY ANN MASKERY

Staff Reporter

TOKYO — New passenger-car sales in Japan in May registered the biggest year-to-year drop in eight years. The total of 257,619 units was down 14.4 percent from May 1991.

It was the 13th consecutive month that sales have fallen from a year earlier. Including trucks, sales fell 12.3 percent, to 379,205 units.

The 1992 month had three fewer sales days, so analysts voiced caution about drawing conclusions.

But Steve Usher, who follows the industry for Kleinwort Benson International in Tokyo, said the sales figures were worse than expected.

"There is a steady deterioration in the market," he said.

Usher said he had anticipated a decline of about 3 percent in year-to-date sales, but sales through May were off 5.8 percent.

Sales of small cars — from 660cc to 2.0 liters, the bulk of the market — slid 19.5 percent last month, to 206,984.

It was the 20th consecutive monthly decline from the previous year.

Sales in the luxury segment above 2.0 liters continued to expand in May, although growth slowed.

The segment, which has been booming since a reduction in the auto tax in April 1989, grew 15.5 percent in May, to 50,635 units. The increase followed a 57 percent year-to-year rise in April and was the smallest monthly gain since the tax change.

"The growth in the large-car segment is slowing," Usher said. "But it's about time."

Among the major producers:

- Toyota Motor Corp. sales fell 13.3 percent in May, to 159,883 units. Sales of the Corolla, Japan's best-selling car, dropped 24.6 percent, to 17,536 units, continuing a slide that began with the introduction of the restyled Corolla a year ago.
- Nissan Motor Co. Ltd. was off 11.5 percent to 86,022 units;
- Honda Motor Co. fell 9.9 percent to 31,882 units;
- Mazda Motor Corp. dipped 15.1 percent to 29,685 units;
- Mitsubishi Motors Corp., which has posted gains for most of the last year, was down 5 percent to 32,657 units.

The totals include truck sales.

Sales of mini-vehicles (under 660cc) in May fell 16.7 percent, to 121,287 units, the 13th straight month of decline.

Continuing a 17-month string of year-to-year declines, import sales fell 13.2 percent last month, to 13,561 units.

German marques, which control more than 60 percent of the import segment, were down 8 percent, to 8,002 units:

- Volkswagen was off 20.7 percent, to 1,788 units;
- Audi slipped 0.5 percent, to 968 units;
- BMW was down 4.3 percent, to 2,151 units;
- Mercedes-Benz was off 0.7 percent, to 2,705 units.

Among the Big 3, General Motors ended a string of monthly gains with a 4.1 percent sales decline last month. GM sales totaled 728 units.

Chrysler Corp. slumped 28.9 percent, to 81 units, while Ford Motor Co. posted a 3.8 percent gain, to 245.

Sales of the U.S.-built Honda Accord plummeted 34.5 percent from a year earlier, to 1,044 units.

But the U.S.-built car remained the top-selling American import.

Makers give rebates a summer tuneup

CHARLES E. RAMIREZ
Special Correspondent

Five manufacturers have extended and altered their customer rebate programs, and Honda has done likewise with its dealer incentives.

The customer rebate action involves **Buick, Oldsmobile, Chevrolet, Hyundai and Subaru.**

Buick has extended customer rebates through Sept. 23. The program was scheduled to expire June 4. Rebates remain at $2,000 on the Riviera, $1,000 on the Roadmaster and $500-$1,250 on the Skylark.

Payments on the Century and the LeSabre were reduced from $250-$1,250 to $250-$1,000, but the Regal rebate was boosted from $500-$1,250 to $750-$1,500. Buick has added a $1,000 rebate on the Park Avenue/Ultra.

Buick rebates are tied to the option package selected by the customer. In lieu of rebates, Buick buyers can select finance rates ranging from 2.9 to 6.9 percent.

Chevrolet has made some changes in its customer rebate program, which is scheduled to expire Sept. 23.

Changes include: a raise from $500 to $700 on 1992 Geo Metros with automatic transmission; an increase from $750 to $1,500 on all 1991 and 1992 Geo Storms and 1992 Luminas; an increase from $1,000 to $1,500 on 1992 Geo Prizms; a raise from $500 to $750 on Cavaliers; an increase from $1,000 to $1,300 for the G-Van upfit; and a raise from $1,500 to $2,000 on the S/T Blazer.

Rebates on the C/K full-sized pickup and chassis cab, excluding the crew cab, remain at $400 until June 30 and then drop to $300.

Chevrolet offers the same financing rates as Buick.

In addition to extending regional customer rebates on 1992 models through Sept. 23, **Oldsmobile** has added a $750 rebate for the 1992 Achieva.

New rebates include: $500-$2,500 for the Toronado, up $500; $500-$1,000 for the Silhouette, down $1,000; $500-$2,000 for the Bravada; $500-$2,000 for the Custom Cruiser, up $500; $500-$1,250 for the Cutlass Supreme, down $250; $1,500 for the Ninety Eight, up from $500-$1,250; and $500-$1,000 for the Eighty Eight Royale, down $250.

Cut-rate financing is available in lieu of rebates.

Owners of Ford Motor Co. vehicles are eligible for a $1,000 "owner loyalty" rebate if they purchase a 1992 Ford Crown Victoria, 1992 Mercury Grand Marquis or 1992 Mercury Cougar.

The $1,000 is in addition to the $500 rebate on those cars. The offer expires June 30 on Cougar and Sept. 23 on Crown Victoria and Grand Marquis.

Honda has extended its dealer incentives of $400 on the 1992 Civic four-door and $750 on the 1992 Accord sedan and coupe. New is a $1,000 dealer rebate on the 1992 Accord wagon. The incentives expire July 2.

Hyundai has extended its customer incentive program from June 2 to July 6. Payments range from $1,200 to $2,000 on 1991 models and from $500 to $1,000 on 1992 models.

Subaru has extended its dealer and customer rebate programs from June 2 to Aug. 3.

Dealer incentives are $500 on 1992 Loyales, $1,500 on 1992 Legacys invoiced after Feb. 4 and $1,000 on 1992 Legacys invoiced before Feb. 4.

Customer rebates are $500 on 1992 Loyale front-wheel-drive sedans and all-wheel-drive wagons.

Until June 30, **Volvo** is offering customers free maintenance for three years or 50,000 miles on all of its 1992 vehicles. ■

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAMS	
HONDA (1992 models, expires July 2)	
Civic 4-door	$400

Swift (1991)	$700-1,000
Sidekick (1991)	$500-1,000
VOLKSWAGEN (no expiration date)	
Passat (1991)	$1,500
Jetta, Fox, Golf (1991)	$500
All 1990 cars	$500-1,500

Verdict due June 24 in minivan dumping case

MAX GATES
Staff Reporter

WASHINGTON — The last piece of the minivan dumping case against Toyota and Mazda will be put in place June 24 with a public vote by the six members of the International Trade Commission.

The commission will decide whether the Big 3 were injured by marketing practices of Toyota and Mazda. The U.S. Commerce Department already has ruled that Toyota Previa and Mazda MPV minivans were sold in the United States at less than fair market price during late 1990 and early 1991. The votes of three commissioners are needed to show that the Big 3 were harmed by the Japanese trading practices.

If the International Trade Commission finds injury, the Japanese automakers will be required to pay penalties equal to the so-called dumping margin, the amount by which they underpriced their minivans. In May, the Commerce Department found that Mazda was selling the MPV at 12.7 percent less than fair market value and Toyota was selling its Previa at 6.75 percent less than fair market value.

Commerce Department officials said they conducted an "unprecedented" investigation of Japanese manufacturing operations in an attempt to determine a fair value for Previa and MPV models, which are assembled in Japan. That investigation was aimed in part at understanding the *keiretsu* relationship between Toyota and Mazda and their closely related supplier companies. ■

Amati adds 22 dealers

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Amati, the luxury-car division of Mazda Motor of America Inc., signed 22 more dealers last week, bringing its total to 41. The company said it plans to have 75 when it begins selling cars in 1994.

That marks a switch. The original plan called for 50 Amati dealers at introduction time. The division says it increased the total because it is finding more dealers than expected that meet Amati's standards for location, financial strength and customer satisfaction.

The division plans to sign two more groups of dealers within six months. Amati also said it expects to sell 20,000 of its two luxury sedans during 1994.

Fourteen of the 22 newest dealers have Mazda franchises. Of the 41 dealers signed so far, 24 own Mazda stores.

The 22 franchises have been awarded to: John Anderson, Thousand Oaks, Calif.; Billy Barrett, Gena Barrett Bailey and Bradley Barrett, Dallas; Roger Beasley, Austin, Texas; Roger Burdick, Rochester, N.Y.; Ray Catena, Edison, N.J.; and Robert Dimmerman, Maple Shade, N.J.

Also: James Ellis Jr., Marietta, Ga; Howard Keyes, Van Nuys, Calif.; Steven Knappenberger, Scottsdale, Ariz.; Mark Lacher, Howard Koeppel and Daniel Koeppel, Woodside, N.Y.; Terry Lindsay, Alexandria, Va.; Jim McDonald, Oakland, Calif.; and Ed Morse and Ted Morse, Coconut Creek, Fla.

Also: Robert Ourisman and Dennis Rippeon, Rockville, Md.; David Parkin and John Hawkins, Montclair, Calif.; John Rosatti, Hollywood, Fla.; Ronald Salhany, Tampa, Fla.; John Staluppi, West Palm Beach, Fla.; Michael Stead, Walnut Creek, Calif.; Ken Uemura, Birmingham, Ala.; Morrie Wagener, Minnetonka, Minn.; and Robert Zinn and David Zinn, Miami. ■

Minorities eye federal help

MAX GATES
Staff Reporter

WASHINGTON — Saying half its members are in danger of going out of business if they don't get some new financial backing, the nation's minority dealers have asked the federal government for $300 million in guaranteed loans and job training.

"If President Bush and the chairmen of the Big 3 can approach the government of Japan, if aid can go to help other struggling nations, is it too much to ask for the federal government to help us?" asked Mel Farr, a suburban Detroit dealer speaking for the National Association of Minority Automobile Dealers. Farr spoke at the group's mid-year conference.

Farr said 20 percent of the minority dealers have failed in the past two years, "and 50 percent are looking at balance sheets with red ink."

Farr had strong words for foreign makers that have refused to offer programs to help minorities open dealerships. Just over 3 percent of Big 3 dealerships in the U.S. are minority-owned, compared with 0.6 percent of Japanese dealerships and 0.7 percent of European dealerships, according to association figures. ■

Lawmakers pound out trade bill

MAX GATES
Staff Reporter

WASHINGTON — House Democrats will get serious about anti-Japan trade legislation when they begin revising a bill designed to give U.S. automakers "breathing room" to catch up with the Japanese.

Markup, the drafting of a final form of the bill, is scheduled for Tuesday. No amendments to the bill had been offered last week, and House aides said no consensus had emerged on the bill's final form.

The bill has a powerful sponsor in Rep. Dan Rostenkowski, D-Ill., chairman of the Ways and Means Committee. But the markup will be run by Rep. Sam Gibbons, D-Fla., chairman of the subcommittee on trade, who has opposed the auto sections of the bill as protectionist.

The situation is further complicated by mixed support from the Big 3. Chrysler Corp. has enthusiastically endorsed the bill. Ford Motor Co. Chairman Harold Poling has said he supports the bill reluctantly. General Motors, while backing some sections, says it opposes the bill.

The measure is intended to give the Big 3 a chance to become competitive with the Japanese. It requires the Big 3 to demonstrate improvements in productivity and competitiveness in return for seven-year protection from increased Japanese sales.

Sections of the broad-ranging trade bill would require the president to negotiate a voluntary restraint agreement with Japan that would limit sales of Japanese-badged vehicles in the United States at 1992 levels for seven years.

The sales limit would affect both imports and vehicles produced in Japanese transplants. Under the current version of the bill, the Japanese would be permitted to increase U.S. sales if the Big 3 increase sales in Japan. AN

obituary

Milton Lewis

VERONA, N.J. — Milton H. Lewis, chairman and founder of American Leasing Corp. of East Orange, N.J., died May 19. Lewis is considered a pioneer in leasing. He built one of the oldest and largest leasing companies in New Jersey. He was 87.

Trucks set record in May

ANNE E. WRIGHT
Chief Statistician

U.S. and Canadian truck production in May was the highest for any month in history.

The makers built 417,118 trucks in the United States and 83,301 in Canada for a total of 500,419. The previous peak was 499,140 in May 1989.

Last month's total was an increase of 13.6 percent over April and 19.1 percent over May 1991.

U.S. and Canadian car production in May totaled 639,264, the highest monthly output so far in 1992.

In the United States, May car production was 546,413. Canadian producers assembled 92,851.

Last week's estimated output of cars in the United States and Canada was 162,059, an increase of 20.1 percent over the prior holiday week (in the United States) and 15.8 percent over the year-ago week.

So far this year, U.S. and Canadian car production totals 2,991,222, up 4.4 percent from 2,864,862 last year.

U.S. and Canadian truck production was estimated at 111,255 last week, an increase of 13.0 percent over the prior holiday week and 9.3 percent above the same week in 1991.

Year-to-date, truck production in the United States and Canada is 2,234,787 an increase of 25.1 percent over 1991.

Ford of Canada lost two full shifts of production last Monday because of an illegal strike by cafeteria workers at its St. Thomas, Ontario, plant.

Ford workers would not cross the picket line, and the plant lost production of 1,200 Ford Crown Victoria and Mercury Grand Marquis cars. Production resumed Tuesday.

Ford scheduled daily overtime last week at the Atlanta; Chicago; and St. Thomas, Ontario, car plants and at the Kansas City, Mo.; Edison, N.J.; Louisville, Ky.; and St. Louis truck plants.

All of Chrysler's U.S. plants are scheduled for daily overtime this week with the exception of the New Mack Ave. (Detroit) facility, which will operate one eight-hour shift each day.

Working last Saturday were the St. Louis (No. 2); Jefferson North (Detroit); Sterling Heights, Mich.; Windsor, Ontario; and Pillette Road (Windsor, Ontario) plants.

General Motors has reduced production at the Wentzville, Mo., car plant to one shift throughout June to adjust inventories. The company also reduced the postal line at the Moraine, Ohio, truck facility to a four-day work week indefinitely.

GM plants scheduled for overtime last week were Oklahoma City; Lansing, Mich. (C and M); Oshawa, Ontario; and Scarborough, Ontario.

The Suburban line at GM's Janesville, Wis., plant worked daily and Saturday overtime last week. AN

Fiat jabs Ford on tractor deal

Fiat Auto S.p.A. has told Ford Motor Co. that it will seek arbitration if the companies cannot agree on financial arrangements of last year's sale of Ford New Holland to Fiat.

Ford sold 80 percent of its tractor operation to Fiat last May for $273 million and retained 20 percent of the new company called N.H. Geotech n.v. Inc.

Neither Ford spokesman John Ochs nor Fiat spokesman Gualberto Ranieri would be specific about Fiat's complaints. Ranieri says only that it's a "financial issue."

Ochs says that in any international sale, both parties have one year to resolve all issues or the matters can be taken to arbitration.

— Kathy Jackson

IRS form due by June 28

Dealers have until June 28 to file Form 3115 which can help protect them from an audit by the Internal Revenue Service on how they accounted for extended service contract sales sold in 1992.

The National Automobile Dealers Association, working with the accounting firm Ernst & Young, will prepare the form for dealers for a fee. A coalition of independent

GMAC employees punished

Workers held accountable: it 'happened on their watch'

CHARLES M. THOMAS and PHIL FRAME
Staff Reporters

By disciplining the entire GMAC chain of command last week for a multimillion-dollar fraud loss, General Motors directors told employees in the strongest possible way that they will be held accountable for their decisions.

The punishments stretched from the chairman of General Motors Acceptance Corp. to a low-level assistant branch manager, and GM promised more disciplinary action will follow.

GMAC suffered a $171 million after-tax loss after allegedly being defrauded by a New York dealer. A company investigation that began in December found no wrongdoing by any GMAC employees, but many were disciplined. Some executives were moved toward early retirement, others were demoted.

The GM board of directors disciplined the GMAC officials because the fraud "happened on their watch," said Jack Barrett, who was appointed vice president for the Eastern United States and Canada in the shakeup. He was GMAC director of corporate communications.

"We've concluded that the individuals associated with the McNamara case did not fulfill their responsibilities and did not exercise proper business judgment," Barrett said. "There probably were other decisions that could have been made."

But Barrett declined to elaborate on what decisions should have been made differently.

Even GMAC Chairman John Edman chose early retirement on May 1, several months prior to his 65th birthday, as a result of the imbroglio. He was replaced by Robert O'Connell.

Last week, GMAC President William Lovejoy, 51, was placed on special assignment. Obviously shaken by the treatment dealt to his management team, Lovejoy said, "I can't talk to you about this. Let it lie."

A prominent GM dealer said it wasn't fair to remove Lovejoy.

Ray Green, former National Automobile Dealers Association president and president of Green Holding Co. in Jacksonville, Ill., lauded Lovejoy for his readiness to "listen to dealers and their problems."

'93 nose job

Ford stylists are apparently doing a little cosmetic surgery for the 1993 model year. Spied recently was a Ford Crown Victoria sporting a chrome grille. Changes to the Ford Explorer are pictured on Page 2.

Chrysler maps plan to combine divisions

MARY CONNELLY
Staff Reporter

In hundreds of towns throughout the country, Chrysler Corp. is mapping a strategy to meld its 5,000 dealers into only two retail divisions instead of three by the end of the decade.

Marketing plans for each of Chrysler's 25 U.S. sales zones are beginning to reflect the company's plan to merge the Chrysler-Plymouth and Jeep-Eagle divisions by the year 2000.

Dodge division will not be affected by the merger.

Non-metropolitan dealers are being advised to contact zone managers to review the preliminary strategy to learn whether dealership mergers are planned.

The Jeep-Eagle National Dealer Council has asked Chrysler Corp. to establish a non-binding review panel to handle any complaints that arise from the plan. The panel would be composed of dealer and factory representatives from out-

Next Accord will come in 2 sizes

Bigger model for U.S., smaller car for Japan

RICHARD JOHNSON
Staff Reporter

TOKYO — Honda Motor Co. will abandon its global car concept and bring out two sharply different successors for the Accord next year. The new models, one for the United States and one for Japan, will be different sizes and may have different names.

The differentiation marks Honda's belated recognition that consumer tastes in the two markets are vastly different.

Americans want the next generation of the Accord — the best-selling passenger car in the United States for three years running — to become larger, with a six-cylinder engine.

Japanese consumers demand a smaller car.

Europeans, meanwhile, will get a British-built version of the new Accord-derived Ascot Innova that was introduced recently in Japan. Called the Accord EC, it will be supplemented by the U.S.-built coupe and wagon.

"The Accord originated from Japan, but now it is like an American car. It's grown up to be what it is today in the United States," Shinya Iwakura, Honda's chief product planner, said in an interview. Iwakura is general manager of Honda's Automobile Planning Board and senior managing director of Honda R&D Co.

"I think at this point it is useless to try to bring it back to Japan," Iwakura said. Honda of America Manufacturing Inc. could even become the sole source for the basic four-door sedan while Japan might build derivatives that do not carry the Accord name, he suggested.

see ACCORD,35

The philosophy for the current-generation Accord was that one size fits all markets.

Automakers plan quick '93 changeover

GWENDOLYN ZONGHETTI
Special Correspondent

Automakers will have a relatively short changeover schedule this summer, and it is expected to be smooth because of lean inventories and optimism for a recovering economy.

Although the General Motors changeover will be shorter than last year's and should be sweet, it may have a bitter taste for some GM workers.

As a cost-cutting measure, Chairman Robert Stempel in February asked workers to take vacations coinciding with plant changeover shutdowns, but virtually every UAW GM local turned a deaf ear to Stempel's request.

Overall prospects for a smooth changeover to 1993-model production are enhanced because the country's vehicle dealers are optimistic about the

Lotus pulls plug on Elan

PHIL FRAME
and DIANA T. KURYLKO
Staff Reporters

Group Lotus Ltd. will announce today that it is discontinuing the year-old Elan and laying off workers at its factory in Bethel, England, according to sources.

The move would mark a sharp retreat from the U.S. market, which traditionally has accounted for one-third of Lotus' worldwide sales.

The front-wheel-drive Elan was designed specifically for the United States, but its $40,000 price tag and introduction during the Persian Gulf War and a U.S. recession virtually assured its demise.

General Motors owns the Brit-

extended service contract administrators also is making a sample of the form available through state dealer associations.

The IRS is auditing hundreds of dealers and charging back taxes and interest on the sale of extended service contracts in which the dealer is the principal. Form 3115 notifies the IRS that the dealership has changed its accounting practices to comply with the agency's ruling that extended service contracts should be treated as prepaid insurance.

Korean group to build trucks

SEOUL — The Samsung Group, Korea's largest conglomerate with interests ranging from computers to shipbuilding, said Friday it had won government approval to begin producing trucks and other commercial vehicles next year.

Samsung said its Samsung Heavy Industries subsidiary would convert two of its assembly lines to produce 4,100 heavy-duty commercial vehicles a year. Japan's Nissan Diesel Motor Co. will provide the technology, Samsung said.

The government had denied a previous Samsung bid to enter the vehicle sector on the grounds of overcapacity. The company's current bid has been vigorously opposed by Korea's other makers for the same reason.

Kearns wins Chrysler case

DETROIT — Chrysler Corp. has been ordered to pay intermittent-wiper inventor Robert Kearns $11.3 million.

Kearns, who represented himself in U.S. District Court, was seeking $33 million from the maker for patent infringement.

The inventor won a similar suit against Ford Motor Co. and later settled out of court for $10.2 million.

General Motors and 17 other carmakers are still Kearns' targets.

Md. guzzler tax called illegal

WASHINGTON — A federal attorney says a new Maryland law taxing gas guzzlers and giving rebates to buyers of gas sippers is illegal.

Federal law says the corporate average fuel economy system is to be administered by the U.S. secretary of transportation, who has delegated that authority to NHTSA, Paul Jackson Rice, NHTSA chief attorney, told the Maryland attorney general.

The Maryland law puts a $100 surcharge on passenger cars and multipurpose vehicles with a CAFE rating less than 21 mpg, beginning with the 1993 model year. It provides a $50 rebate for vehicles rated at better than 35 mpg.

Ford recalls 895,000 cars

DEARBORN, Mich. — Ford Motor Co. is recalling about 895,000 vehicles to replace the exhaust system catalyst.

The vehicles were built for sale in the United States, except California, and Canada. Ford said the internal catalyst material may rattle and break up during normal usage, causing the vehicle to exceed emissions standards.

Affected vehicles are: 1986 Ford Mustang and Mercury Capri with the 3.8-liter V-6; 1987-89 Mustangs with the 2.3-liter four; 1986-89 Mustangs with the 5.0-liter V-8; 1986-99 Ford Thunderbird and Mercury Cougar with the 3.8-liter V-6; and the 1986-89 Lincoln Mark VII with the 5.0-liter V-8.

Saturns on sale in Taiwan

Saturn Corp. began selling cars in Taiwan last week, its first exposure outside North America, for the low, low price of 570,000 Taiwanese dollars — or $23,286.

The price includes a 30 percent tariff, said a Saturn spokeswoman. In the United States, Saturns sell for as low as $8,395, but that doesn't include the optional anti-lock brakes and driver-side airbag that come standard with the Taiwanese cars.

The Saturns will be sold by GM Taiwan through its retailer, Chinese Automobile Co. There are two dealerships — in Yang Ming, north of Taipei, and in Kaohsiung. Three more are planned by the end of 1992.

— *Phil Frame*

Gilmour: Japan not backing off

WASHINGTON — Japanese automakers have not backed away from the U.S. market, says Allan Gilmour, executive vice president of Ford Motor Co.

"I haven't seen any evidence that the Japanese companies or their dealers are saying, 'I'll relax.' " Gilmour told the Washington Automotive Press Association last week.

He said the most important part of the current anti-Japanese trade bills in Congress is the proposed extension of "Super 301." That law would require the government to annually assess trading partners and take actions against unfair trade practices of countries with long-running surpluses.

— *Max Gates*

Ford matches GM van rebate

DETROIT — Ford Division responded to a Chevrolet-GMC increase in consumer rebates on van conversions.

For June 12-30, Ford's consumer rebate on the E150 Econoline with the RV package has been increased to $1,300 from $1,000.

The program ends the same day as the schedule for Ford's other rebates.

— *Joseph Bohn*

briefly

Chrysler smoke catches fire

Outside Japan, **Chrysler Corp.** is best at product development, says lean-production guru James Womack. He told engineers at a Data Control Systems product seminar that Chrysler's dual-hat approach, in which team leaders are also functional bosses, let it develop the LH with 741 people in 39 months, compared to 1,400 people and 60 months in the old days of the 1980s. He admits he was surprised. "Three years ago (when Womack was writing *The Machine That Changed the World*), I thought Chrysler was just a cloud of cigar smoke."

UN-RENAMING — After changing "Stanza" to "Altima" with a lot of fanfare, **Nissan** says it is being forced to put both names on the trunk lid because of "some complicated government regulations." "Altima" gets large silver letters in the center, "Stanza" gets a small decal. Shades of the Datsun-Nissan name game.

WHY TO BUY AN RV — Jim Perkins, **Chevrolet** general manager, was talking about a deal with the Recreational Vehicle Industry Association. "I kind of like RVs," he said. "In this business, there's something to be said for having all of your clothes together, so you can get out of town quick."

ON THE WIND — **Chrysler Corp.** has named the five Transatlantic balloon race teams that will descend on Europe in August to promote Chrysler's return. Two-person teams from Belgium, Germany, Great Britain, The Netherlands and the United States will pilot identical helium balloons, leaving Aug. 16 or as soon after as the weather is right.

ANYONE CAN WAVE — A U.S. subsidiary of the German robotics supplier KUKA Schweissanlagen + Roboter GmbH, proudly announces that its "Buy American" campaign was a hit: 12 of its 41 qualified U.S. employees bought or leased Big 3 vehicles.

ROSTY RETREATS — The fight's still in progress, but protectionists have backed away from their controversial proposal to limit sales of Japanese transplants if the Big 3 don't do better in Japan. House co-sponsor Dan Rostenkowski, D-Ill., pulled that section from his trade bill while he tries to come up with a new plan. He said, "Though well-intentioned, this section could have the unintended effect of chilling foreign investment in the United States."

COOL CUP — **Chevrolet** got to see the America's Cup won by sponsoree America3 last week when skipper Buddy Melges came to Warren, Mich. The venerable sailing prize travels by first-class plane seat and is wrapped in plexiglass. Not even division chief Jim Perkins could leave a fingerprint.

TO THE EDITOR

continued from PAGE 12

involved general managers' and sales managers' interviews on how they sell cars at invoice, giving the impression that those sales are profitable because of the holdback.

The NADA's 1991 year-end comparison figures show that the average dealer's cost-to-sell is $1,564 per vehicle. The holdback, as you pointed out, ranges from $250 on an Escort to $1,200 on a Cadillac Seville. Clearly, the dealer does not profit on such deals; he loses.

Secondly, the stories did not touch upon another growing marketing trend that also plays havoc with dealer grosses.

I refer to company sales plans to corporate accounts (e.g. Northwest Airline employees) which fix dealer grosses; the heavily advertised lease deals that fix monthly payments; and the "one-price-for-any-model" programs like Ford's "Any Escort under $10,000."

As a result, franchises are literally controlled by the manufacturers who fix prices and/or grosses at levels that do not allow dealers to cover overhead expenses.

Dealers have to wake up to the fact that they're in business to make a profit and do their homework to see what kind of grosses they need to do so.

In addition to these fixed-price programs, the manufacturers have further impaired dealer profitability by overdealering, manipulative distribution and huge fleet sales.

They're doing so because they are faced with tremendous overcapacity in a market that has shrunk, but they have no right to ignore dealer profitability while addressing their own.

Ford Dealers Alliance
Hackensack, N.J.

Japanese provide U.S. jobs

I am an American. I live in California, and I work for a Japanese importer. And I'm tired of seeing the employees of the import industry forgotten.

More than half a million Americans like me work directly for importers, distributors, dealers, transplant factories and parts suppliers. The sale of a given product, a Japanese automobile, is our livelihood.

Significant restrictions on automotive imports would reduce the number of jobs available in the entire automotive industry in the United States. The Japanese companies would have to make personnel cutbacks.

Most of those jobs would not reappear in the domestic industry. It takes more people to establish an organization than it does to expand one.

We need to remind the domestic auto industry that Americans are employed by the Japanese. Putting one group of Americans out of work to hire another group is a trade-off. It just puts different people out of work.

We need to remind our representatives in Congress that there is a bigger picture than their voting district. They need to expand their view to include what's good for the U.S. economy. If the U.S. economy heals, the local economies will follow.

The Japanese contribute to our economy by putting Americans to work. And that is what it's all about.

ALAN VOORHEES
Anaheim, Calif.

Important words on new-car prices

Rance Crain's commentary on Detroit's new-car pricing habits (May 18) was one of the best I've seen in years.

The powerful message that "Consumers don't just want lower prices, they want fair prices that put them on a level playing field with everyone else," strikes at the very heart of why the new-car shopping process is held in such low esteem by U.S. consumers.

The comment, "What customers want in all product and service categories is lower prices, yes, but also the assurance that they're paying the same low price as anyone else," is certainly no surprise to veteran new-car dealers.

During my 45 years in the new-car business, I never had a new-car buyer who thought he had paid too much for his car until a friend or relative told him (accurately, in many cases) that he could have gotten a better deal somewhere else.

Is it any wonder that new-car buyers have minimal confidence in new-car prices when humongous factory rebates are so generously and capriciously offered and dealers will knock hundreds of additional dollars off sticker prices in the blink of an eye?

I believe many new-car dealers have serious credibility problems with the manner in which new cars are priced to them. Isn't it then natural that this same lack of trust should be transmitted to their customers?

Crain's message to the industry should not go unnoticed. Congratulations!

NAT SHULMAN
Kailua, Hawaii

Employees' goofs add to GM prices

I have read with some amusement and interest your articles covering the fiasco confronting General Motors and General Motors Acceptance Corp. in regard to the McNamara case in Long Island, N.Y. Apparently GM is out approximately $436 million because of the ineptness of its employees.

On Page 8 of your May 25 issue, Robert Stempel said, "I assure you it will not happen again."

This is almost identical to a conversation I had with Ray McCarthy, then GMAC executive vice president of operations, in December 1981 while I was a supervisor at GMAC.

His words were, "We have taken steps to see that this does not happen again, and the people responsible are no longer with us." We were discussing an out-of-trust situation that occurred in Washington, Kan., and also cost GM millions of dollars. Heads rolled after that one, too, but apparently no lessons were learned.

Recent news reports have given extensive coverage to GM's new purchasing vice president, Ignacio Lopez, and his "radical" concept of opening up all parts purchases from vendors to bidding in an effort to reduce costs. Sorry, but this seems like a common sense effort to reduce costs instead of the move of a genius.

I would have thought that, at the conclusion of each supplier contract, GM would already have the practice in place of circulating specifications and taking bids for a supplier that can meet those specifications at the lowest cost. It's pretty easy to see why your new-vehicle costs rise constantly when all you do is accept your long-time supplier's price increase and pass it along to the consumer.

It is no wonder that many former GM owners now purchase other makes when you look at the money wasted on out-of-trust dealers and rubber-stamped suppliers.

What do they care? They will just pass it on to the car buyers and then complain about the foreign competition.

Mercedes S class has 20% discount

There was a slight error in the list of dealer discounts for Mercedes-Benz models on Page 22 of your May 18 issue, which we'd like to make you aware of for future reference.

The figure for the S class should be 20 percent, which is the across-the-board dealer discount for all models. The list showed a discount of 19.5 percent.

Montvale, N.J.

Auction job hunt called a Catch 22

I'm an auctioneer with 14 years experience in the automobile industry as a top-ranked salesman, manager and used-car dealer.

Two years ago, I went to auction school to change professions and enter an exciting industry with huge potential, along with it being something I always have wanted to do.

My goal was, and still is, to be a professional auto auctioneer working a circuit of four or five auctions a week.

I have found that it is almost impossible to break into the auto auction industry. It's a Catch 22 situation. You can't get hired if you haven't "called" auto auctions. But if they don't give you the chance, you can't get any working experience.

It seems to me that in a multi-billion-dollar industry, there would be a training program for working auctioneers such as myself who wish to be part of the auto auction industry.

As the auction industry continues to grow, there will be a continual need for well-trained professional auctioneers. I know that after a short training period to learn the ropes, I would be an asset to any auction.
